Levitin, 2014-08-18 Two of the most important social skills in humans are the ability to determine the moods of those around us and to use this to guide our behavior To accomplish this we make use of numerous cues Among the most important are vocal cues from both speech and non speech sounds Music is also a reliable method for communicating emotion It is often present in social situations and can serve to unify a group's mood for ceremonial purposes funerals weddings or general social interactions Scientists and philosophers have speculated on the origins of music and language and the possible common bases of emotional expression through music speech and other vocalizations They have found increasing evidence of commonalities among them However the domains in which researchers investigate these topics do not always overlap or share a common language so communication between disciplines has been limited The aim of this Research Topic is to bring together research across multiple disciplines related to the production and perception of emotional cues in music speech and non verbal vocalizations This includes natural sounds produced by human and non human primates as well as synthesized sounds Research methodology includes survey behavioral and neuroimaging techniques investigating adults as well as developmental populations including those with atypical development Studies using laboratory tasks as well as studies in more naturalistic settings are included The Science-Music Borderlands Elizabeth H. Margulis, Psyche Loui, Deirdre Loughridge, 2023-05-02 Interdisciplinary essays on music psychology that integrate scientific humanistic and artistic ways of knowing in transformative ways Researchers using scientific methods and approaches to advance our understanding of music and musicality have not yet grappled with some of the perils that humanistic fields concentrating on music have long articulated In this edited volume established and emerging researchers neuroscientists and cognitive scientists musicians historical musicologists and ethnomusicologists build bridges between humanistic and scientific approaches to music studies particularly music psychology Deftly edited by Elizabeth H Margulis Psyche Loui and Deirdre Loughridge The Science Music Borderlands embodies how sustained interaction among disciplines can lead to a richer understanding of musical life The essays in this volume provide the scientific study of music with its first major reckoning exploring the intellectual history of the field and its central debates while charting a path forward The Science Music Borderlands is essential reading for music scholars from any disciplinary background It will also interest those working at the intersection of music and science such as music teachers performers composers and music therapists Contributors Manuel Anglada Tort Salwa El Sawan Castelo Branco Hu Chuan Peng Laura K Cirelli Alexander W Cowan Jonathan De Souza Diana Deutsch Diandra Duengen Sarah Faber Steven Feld Shinya Fujii Assal Habibi Erin E Hannon Shantala Hegde Beatriz Ilari Jason Jabbour Nori Jacoby Haley E Kragness Grace Leslie Casey Lew Williams Deirdre Loughridge Psyche Loui Diana Mangalagiu Elizabeth H Margulis Randy McIntosh Rita McNamara Eduardo Reck Miranda Daniel M llensiefen Rachel Mundy
