Frequency Control Of Semiconductor Lasers:

Frequency Control of Semiconductor Lasers Motoichi Ohtsu, 1996-03-08 This book provides coverage of the principles and practices of frequency control as they apply to semiconductor lasers Single Frequency Semiconductor Lasers Zujie Fang, Haiwen Cai, Gaoting Chen, Ronghui Qu, 2017-07-29 This book systematically introduces the single frequency semiconductor laser which is widely used in many vital advanced technologies such as the laser cooling of atoms and atomic clock high precision measurements and spectroscopy coherent optical communications and advanced optical sensors It presents both the fundamentals and characteristics of semiconductor lasers including basic F P structure and monolithic integrated structures interprets laser noises and their measurements and explains mechanisms and technologies relating to the main aspects of single frequency lasers including external cavity lasers frequency stabilization technologies frequency sweeping optical phase locked loops and so on It paints a clear physical picture of related technologies and reviews new developments in the field as well It will be a useful reference to graduate students researchers and engineers in the field *Precision Spectroscopy, Diode Lasers, and Optical Frequency Measur* Leo Hollberg, 2000 A selected set of reprints from the Optical Frequency Measurement Group of the Time and Frequency Div of the Nat Inst of Standards and Technology and consists of work published between 1987 and 1997 The 2 programs represented are 1 development of tunable diode laser technology for scientific applications and precision measurements and 2 research toward the goal of realizing optical frequency measurements and synthesis The papers are organized in 5 categories diode laser technology tunable laser systems laser spectroscopy optical synthesis and extended wavelength coverage and multi photon interactions and optical coherence **The Quantum Physics of Atomic Frequency Standards** Jacques Vanier, Cipriana Tomescu, 2015-08-05 This volume covers advances in atomic frequency standards atomic clocks from the last several decades It explains the use of techniques such as laser optical pumping coherent population trapping laser cooling and electromagnetic and optical trapping in the implementation of classical microwave and optical atomic frequency standards The authors describe the basic physics behind the operation of atomic clocks explore new frequency standards that provide better stability and accuracy than conventional standards and illustrate the application of atomic clocks in various areas

Frequency Standards and Metrology Andrea De Marchi, 2012-12-06 Since the previous Symposium several exciting new developments and advances have occurred in the field of frequency standards and metrology These include the first results on the long term stability of a millisecond Pulsar for which data 14 integrated over several years now show a stability of around 10 Improvements in the understanding of various biases in Cesium beam standards promise accuracies in the low 14s for primary standards and in the low 13s for short commercial tubes for which long term stabilities in low 14s have already been shown to be obtainable by accuracy improvement Beams using optical pumping for state selection and for detection have been operated with excellent results and more are being realized Other new frequency standards which have

appeared include a macroscopic rf trap with Mercury ions which performs in the low 15s in one day the sub millimeter metastable Magnesium beam which has shown a short term stability 19 in the low 12s in one second and promises an accuracy of 10 and the cold Hydrogen masers which have such high stabilities that they cannot be measured with existing local oscillators Prospects for future developments include laser manipulation of neutrals and spectroscopy of single ions at rest in a trap Both these groups of techniques have great potential for unprecedented accuracy and short and long term stability and new superior frequency standards are expected to be realizable in this way in the not too distant future

Laser Spectroscopy - Proceedings Of The X International Conference M Ducloy,G Camy,E Giacobino,1992-03-01 The tenth international conference on Laser Spectroscopy covered a broad spectrum of subjects related to laser physics It featured novel results on very basic problems such as laser cooling atomic interferometry QED quantum and nonlinear optics as well as new laser sources and new methods for laser spectroscopy These were presented together with their application to the study of atoms molecules surfaces and condensed matter
