Intracellular Signal Transduction:

Intracellular Signal Transduction: The JAK-STAT Pathway Andrew F. Wilks, Ailsa G. Harpur, 2013-06-29 This book is the first one written about the JAK STAT pathway The JAK Janus Kinase Protein tyrosine kinases are novel phosphotransferases absolutely required for cellular signalling downstream of non catalytic cytokine receptors amongst others These molecules are components in pathways utilising the STAT Signal Transducers and Activators of Transcription transcription factors The basic components of the JAK STAT pathway are covered in detail and the centre piece of the book is a guided tour of the pathway itself An interesting addition to the book is the chapter on the use of *Drosophila melanogaster* as a genetic system to probe the pathway at the whole organism level The book is targeted to researchers who have an interest in intracellular signalling

Extracellular and Intracellular Signaling James D. Adams, Keith Krom Parker, 2011 Intracellular cell signaling is a well understood process However extracellular signals such as hormones adipokines cytokines and neurotransmitters are just as important but have been largely ignored in other works Aimed at medical professionals and pharmaceutical specialists this book integrates extracellular and intracellular signalling processes and offers a fresh perspective on new drug targets

Regulation of Signal Transduction in Human Cell Research Nariyoshi Shinomiya, Hiroaki Kataoka, Qian Xie, 2018-02-15 This volume focuses on the relationship between the regulation of signal transduction and disease mechanisms and discusses how the dysregulation of intracellular signals cause diseases cell death carcinogenesis and other disorders Growth survival transformation and metabolic activities at the cellular level are regulated by various intracellular signal transduction pathways Sources that stimulate intracellular signals include intracellular stresses and signal regulators modulators as well as extracellular growth factors Recent studies on signal transduction analysis using animal and human cell lines have revealed how the intracellular signals are regulated and why their dysregulation leads to pathological states such as tumorigenesis metabolic diseases cell death and so on This book highlights several important key molecules and intracellular signaling pathways such as microRNA the TGF beta signaling pathway the Wnt signaling pathway and MET signaling pathway as topical and highly relevant issues in human cell research related to signal transduction In addition to assessing the pathogenic role of these signaling pathways it focuses on the molecular design of small molecule regulators inhibitors of said pathways one of the most important approaches in this area This book offers a valuable guide helping not only research scientists but also clinicians to understand how the dysregulation of intracellular signals leads to diseases

Intracellular Signal Transduction Hiroyoshi Hidaka, Angus C. Nairn, 1996 Signal transduction is one of the most rapidly expanding fields in biomedical research Written by renowned experts Intracellular Signal Transduction provides up to date reviews on the role of protein phosphorylation cascades and the structure regulation and function of protein kinases and phosphatases This volume was compiled in honor of Dr Edwin Krebs pioneering work in the field of signal transduction which earned him a Nobel Prize It provides information in a variety of areas relating to the biochemistry cell biology and

pharmacology of the signal transduction process in eukaryotic cells Key Features Contains current reviews in signal transduction processes in eukaryotic cells Presents the structure and function of protein kinases and phosphatases Highlights MAP kinase cascades tyrosine phosphatases pharmacology of protein kinases and cyclic nucleotide phosphodiesterases

Intracellular Signaling Mediators in the Circulatory and Ventilatory Systems Marc Thiriet, 2012-09-26 The volumes in this authoritative series present a multidisciplinary approach to modeling and simulation of flows in the cardiovascular and ventilatory systems especially multiscale modeling and coupled simulations The cardiovascular and respiratory systems are tightly coupled as their primary function is to supply oxygen to and remove carbon dioxide from the body's cells Because physiological conduits have deformable and reactive walls macroscopic flow behavior and prediction must be coupled to phenomenological models of nano and microscopic events in a corrector scheme of regulated mechanisms when the vessel lumen caliber varies markedly Therefore investigation of flows of blood and air in physiological conduits requires an understanding of the biology chemistry and physics of these systems together with the mathematical tools to describe their functioning Volume 4 is devoted to major sets of intracellular mediators that transmit signals upon stimulation of cell surface receptors Activation of signaling effectors triggers the release of substances stored in cellular organelles and or gene transcription and protein synthesis Complex stages of cell signaling can be studied using proper mathematical models once the role of each component is carefully handled Volume 4 also reviews various categories of cytosolic and or nuclear mediators and illustrates some major signal transduction pathways such as NF κ B axis oxygen sensing and mechanotransduction

Molecular Cell Biology Harvey Lodish, 2004 The fifth edition provides an authoritative and comprehensive vision of molecular biology today It presents developments in cell birth lineage and death expanded coverage of signaling systems and of metabolism and movement of lipids

TNF-alpha Stimulates the Production of IL-6 Through Intracellular Signal Transduction Pathways Jerold Collins Wilde, 2001

Molecular Cell Biology Harvey F. Lodish, 2008 The sixth edition provides an authoritative and comprehensive vision of molecular biology today It presents developments in cell birth lineage and death expanded coverage of signaling systems and of metabolism and movement of lipids

Cell Signalling Sajal Ray, 2019-04-17 Intracellular signal transduction is an important topic of research in cell and molecular biology It has a wide range of implications in growth differentiation development animal

polarity cellular response monitoring and many disease processes including cancer The functional homeostasis of a cell is assumed to be maintained by an intricate network of signaling that evolved through natural selection This book includes chapters written in the frontier areas of research on cell signaling Issues such as information thermodynamics master regulation of immune tolerance genetically encoded reporter circuits and their applications hypoxia and vitamin K2 mediated signaling processes are addressed and discussed by eminent researchers of the field
