Introduction to Genetic Algorithms S.N. Sivanandam,S. N. Deepa,2007-10-24 Theoriginofevolutionaryalgorithmswasanattempttomimicsomeoftheprocesses taking place in natural evolution Although the details of biological evolution are not completely understood even nowadays there exist some points supported by strong experimental evidence Evolution is a process operating over chromosomes rather than over organisms The former are organic tools encoding the structure of a living being i e a cr ture is built decoding a set of chromosomes Natural selection is the mechanism that relates chromosomes with the ef ciency of the entity they represent thus allowing that ef cient organism which is we adapted to the environment to reproduce more often than those which are not The evolutionary process takes place during the reproduction stage There exists a large number of reproductive mechanisms in Nature Most common ones are mutation that causes the chromosomes of offspring to be different to those of the parents and recombination that combines the chromosomes of the parents to produce the offspring Based upon the features above the three mentioned models of evolutionary c puting were independently and almost simultaneously developed

Integrated Design and Manufacturing in Mechanical Engineering '98 Jean-Louis Batoz,Patrick Chedmail,Gérard Cognet,Clément Fortin,2013-12-14 This volume contains the selected manuscripts of the papers presented at the Second IDMME Conference on Integrated Design and Manufacturing in Mechanical Engineering held in Compiègne France at the University of Technology of Compiègne May 27 29 1998 The purpose of the Conference was to present and discuss topics dealing with the optimization of product design and manufacturing processes with particular attention to 1 the analysis and optimum design of mechanical parts and mechanisms 2 the modeling of forming processes 3 the development of computer aided manufacturing tools 4 the methodological aspects of integrated design and manufacturing in adapted technical and human environments The initiative of the conference and

the organization thereof is mainly due to the efforts of the french PRIMECA group Pool of Computer Resources for Mechanics The international Institution for Production Engineering Research CIRP was helpful to attract international participants The conference brought together three hundred and twenty worldwide participants

Algebraic Methods II: Theory, Tools and Applications Jan A. Bergstra, Loe M.G. Feijs, 1991-04-10 The proper treatment and choice of the basic data structures is an important and complex part in the process of program construction Algebraic methods provide techniques for data abstraction and the structured specification validation and analysis of data structures This volume originates from a workshop organized within ESPRIT Project 432 METEOR An Integrated Formal Approach to Industrial Software Development held in Mierlo The Netherlands September 1989 The volume includes five invited contributions based on workshop talks given by A Finkelstein P Klint C A Middelburg E R Olderog and H A Partsch Ten further papers by members of the METEOR team are based on talks given at the workshop The workshop was a successor to an earlier one held in Passau Germany June 1987 the proceedings of which were published as Lecture Notes in Computer Science Vol 394

Learning and Coordination S.H. Kim, 2012-12-06 Intelligent systems of the natural kind are adaptive and robust they learn over time and degrade gracefully under stress If artificial systems are to display a similar level of sophistication an organizing framework and operating principles are required to manage the resulting complexity of design and behavior This book presents a general framework for adaptive systems The utility of the comprehensive framework is demonstrated by tailoring it to particular models of computational learning ranging from neural networks to declarative logic The key to robustness lies in distributed decision making An exemplar of this strategy is the neural network in both its biological and synthetic forms In a neural network the knowledge is encoded in the collection of cells and their linkages rather than in any single component Distributed decision making is even more apparent in the case of independent agents For a population of autonomous agents their proper coordination may well be more instrumental for attaining their objectives than are their individual capabilities This book probes the problems and opportunities arising from autonomous agents acting individually and collectively Following the general framework for learning systems and its application to neural networks the coordination of independent agents through game theory is explored Finally the utility of game theory for artificial agents is revealed through a case study in robotic coordination Given the universality of the subjects learning behavior and coordinative strategies in uncertain environments this book will be of interest to students and researchers in various disciplines ranging from all areas of engineering to the computing disciplines from the life sciences to the physical sciences and from the management arts to social studies
