Optimal Sensor Networks Scheduling in Identification of Distributed Parameter Systems Maciej Patan,2012-02-24 Sensor networks have recently come into

prominence because they hold the potential to revolutionize a wide spectrum of both civilian and military applications. An ingenious characteristic of sensor networks is the distributed nature of data acquisition. Therefore they seem to be ideally prepared for the task of monitoring processes with spatio-temporal dynamics which constitute one of the most general and important classes of systems in modelling of the real world phenomena. It is clear that careful deployment and activation of sensor nodes are critical for collecting the most valuable information from the observed environment.

Optimal Sensor Network Scheduling in Identification of Distributed Parameter Systems discusses the characteristic features of the sensor scheduling problem, analyzes classical and recent approaches, and proposes a wide range of original solutions, especially dedicated for networks with mobile and scanning nodes. Both researchers and practitioners will find the case studies, the proposed algorithms, and the numerical examples to be invaluable.

Broadband Reflectometry for Enhanced Diagnostics and Monitoring Applications Andrea Cataldo, Egidio De Benedetto, Giuseppe Cannazza, 2011-03-31. This book is dedicated to the adoption of broadband microwave reflectometry (BMR) based methods for diagnostics and monitoring applications. This electromagnetic technique has established as a powerful tool for monitoring purposes in fact it can balance several contrasting requirements such as the versatility of the system, low implementation cost, real-time response, possibility of remote control, reliability, and adequate measurement accuracy. Starting from an extensive survey of the state of the art and from a clear and concise overview of the theoretical background, throughout the book the different approaches of BMR are considered, i.e. time domain reflectometry (TDR), frequency domain reflectometry (FDR), and the TDR/FDR combined approach, and several applications are thoroughly investigated. The applications considered herein are very diverse from each other and cover different fields. In all the described procedures and methods, the ultimate goal is to endow them with a significant performance enhancement in terms of measurement accuracy, low cost, versatility, and practical implementation possibility, so as to unlock the strong potential of BMR.
