Cognition, Brain, and Consciousness Bernard J. Baars, Nicole M. Gage, 2012 Cognitive Neuroscience Richard Passingham, 2016-09-14 Up to the 1960s psychology was deeply under the influence of behaviourism which focused on stimuli and responses and regarded consideration of what may happen in the mind as unapproachable scientifically This began to change with the devising of methods to try to tap into what was going on in the black box of the mind and the development of cognitive psychology With the study of patients who had suffered brain damage or injury to limited parts of the brain outlines of brain components and processes began to take shape and by the end of the 1970s a new science cognitive neuroscience was born But it was with the development of ways of accessing activation of the working brain using imaging techniques such as PET and fMRI that cognitive neuroscience came into its own as a science cutting across psychology and neuroscience with strong connections to philosophy of mind Experiments involving subjects in scanners while doing various tasks thinking problem solving and remembering are shedding light on the brain processes involved The research is exciting and new and often makes media headlines But there is much misunderstanding about what brain imaging tells us and the interpretation of studies on cognition In this Very Short Introduction Richard Passingham a distinguished cognitive neuroscientist gives a provocative and exciting account of the nature and scope of this relatively new field and the techniques available to us focusing on investigation of the human brain He explains what brain imaging shows pointing out common misconceptions and gives a brief overview of the different aspects of human cognition perceiving attending remembering reasoning deciding and acting Passingham concludes with a discussion of the exciting advances that may lie ahead

An Introduction to Cognitive Linguistics Friedrich Ungerer, Hans-Jörg Schmid, 2006 Learning About Language is an exciting and ambitious series of introductions to fundamental topics in language linguistics and related areas The books are designed for students of linguistics and those who are studying language as part of a wider course Cognitive

Linguistics explores the idea that language reflects our experience of the world. It shows that our ability to use language is closely related to other cognitive abilities such as categorization, perception, memory, and attention allocation. Concepts and mental images expressed and evoked by linguistic means are linked by conceptual metaphors and metonymies and merged into more comprehensive cognitive and cultural models, frames, or scenarios. It is only against this background that human communication makes sense. After 25 years of intensive research, cognitive linguistic thinking now holds a firm place both in the wider linguistic and the cognitive science communities. An Introduction to Cognitive Linguistics carefully explains the central concepts of categorization of prototype and gestalt perception of basic level and conceptual hierarchies of figure and ground and of metaphor and metonymy for which an innovative description is provided. It also brings together issues such as iconicity, lexical change, grammaticalization, and language teaching that have profited considerably from being put on a cognitive basis. The second edition of this popular introduction provides a comprehensive and accessible up-to-date overview of Cognitive Linguistics. Clarifies the basic notions supported by new evidence and examples for their application in language learning. Discusses major recent developments in the field, the increasing attention paid to metonymies, Construction Grammar, Conceptual Blending, and its role in online processing. Explores links with neighbouring fields like Relevance Theory. Uses many diagrams and illustrations to make the theoretical argument more tangible. Includes extended exercises. Provides substantial updated suggestions for further reading.

Friedrich Ungerer is Professor of English Linguistics at the University of Rostock, Germany. Hans-Jörg Schmid is Professor of Modern English Linguistics at the University of Munich, where he has also initiated the Interdisciplinary Centre for Cognitive Language Studies (ICCLS).
