Krosnick, Bruce D. Bowen, 1996-07-16 This book describes how surveys are conducted in such a way that they can be believed explains how to read statistical reports and analyze data and provides guidelines that are useful in evaluating polls Using examples from contemporary large surveys and polls as well as from the media the authors stress the importance of understanding tables thoroughly before moving to interval statistics In addition they cover the design of surveys the steps for sampling and question writing interviewing and coding strategies survey analysis from frequency distributions and cross tabulations through to control tables and correlation regression the ethics of survey research and how to read and write reports of survey research Why Did They Do That? an Introduction to Forensic Decision Analysis David W. Peterson, 2007-01-01 Many legal disputes turn on some form of the question Why did they do that Using examples involving employment discrimination political redistricting jury selection and computer code theft we demonstrate that a novel analytical framework connects these diverse cases When this framework is applied to pay discrimination cases it yields information that is more relevant to the issues in dispute than does the traditional framework Computational Methods in Molecular Biology S.L. Salzberg, D.B. Searls, S. Kasif, 1998-06-19 Computational biology is a rapidly expanding field and the number and variety of computational methods used for DNA and protein sequence analysis is growing every day These algorithms are extremely valuable to biotechnology companies and to researchers and teachers in universities This book explains the latest computer technology for analyzing DNA RNA and protein sequences Clear and easy to follow designed

specifically for the non computer scientist it will help biologists make better choices on which algorithm to use New techniques and demonstrations are elucidated as are state of the art problems and more advanced material on the latest algorithms. The primary audience for this volume are molecular biologists working either in biotechnology companies or academic research environments individual researchers and the institutions they work for and students. Any biologist who relies on computers should want this book A secondary audience will be computer scientists developing techniques with applications in biology. An excellent reference for leading techniques it will also help introduce computer scientists to the biology problems. This is an outstanding work which will be ideal for the increasing number of scientists moving into computational biology.
