Evolution Of The Cercopithecoid Forelimb Phylogenetic And Functional Implications From Morphometric Analyses:

Evolution of the Cercopithecoid Forelimb Daniel I. Axelrod, Russell L. Ciochon, 1992 Evolution of the Human Diet Peter S. Ungar, 2007 We are interested in the evolution of hominin diets for several reasons One is the fundamental concern over our present day eating habits and the consequences of our societal choices such as obesity prevalent in some cultures and starvation in others Another is that humans have learned to feed themselves in extremely varied environments and these adaptations which are fundamentally different from those of our closest biological relatives have to have had historical roots of varying depth The third and the reason why most paleoanthropologists are interested in this question is that a species trophic level and feeding adaptations can have a strong effect on body size locomotion life history strategies geographic range habitat choice and social behavior Diet is key to understanding the ecology and evolution of our distant ancestors and their kin the early hominins A study of the range of foods eaten by our progenitors underscores just how unhealthy many of our diets are today This volume brings together authorities from disparate fields to offer new insights into the diets of our ancestors Paleontologists archaeologists primatologists nutritionists and other researchers all contribute pieces to the puzzle This volume has at its core four main sections Reconstructed diets based on hominin fossils tooth size shape structure wear and chemistry mandibular biomechanics Archaeological evidence of subsistence stone tools and modified bones Models of early hominin diets based on the diets of living primates both human and non human paleoecology and energetics Nutritional analyses and their implications for evolutionary medicine New techniques for gleaned information from fossil teeth bones and stone tools new theories stemming from studies of paleoecology and new models coming from analogy with modern humans and other primates all contribute to our understanding When these approaches are brought together they offer an impressive glimpse into the lives of our distant ancestors The contributions in this volume explore the frontiers of our knowledge in each of these disciplines as they address the knowns the unknowns and the unknowables of the evolution of hominin diets **Old World Monkeys** Paul F. Whitehead, Clifford J. Jolly, 2000-05-04 Old World monkeys Cercopithecoidea are the most successful and diverse group of living non human primates in terms of the number of species behavioural repertoires and ecology They have much to teach us about the processes of evolution and the principles of ecology and are among our closest living relatives This volume presents a broad technical account of cercopithecoid biology including molecular behavioural and morphological approaches to phylogeny population structure allometry fossil history functional morphology ecology cognitive capabilities social behaviour and conservation It will be the definitive reference on this group for professionals and graduate students in primatology animal behaviour paleontology morphology systematics and physical anthropology but will also be useful to senior undergraduates *Mammalian Evolutionary Morphology* Eric J. Sargis, Marian Dagosto, 2008-05-21 This book celebrates the contributions of Dr Frederick S Szalay to the field of Mammalian Evolutionary

Morphology Professor Szalay is a strong advocate for biologically and evolutionarily meaningful character analysis He has published about 200 articles six monographs and six books on this subject This book features subjects such as the evolution and adaptation of mammals and provides up to date articles on the evolutionary morphology of a wide range of mammalian groups **University of California Publications in Geological Sciences** ,1952 *The Miocene Purple Mountain Flora of Western Nevada* Daniel I. Axelrod,1995-01-01 In this study nine florules from the Chloropagus Formation near Fernley Nevada are dated at 14 7 13 4 million years The author finds that dominant mixed conifer forest and sclerophyll woodland species of the Sierra Nevada Klamath region replaced exotic deciduous hardwoods in the two lowest sites He concludes that this change reflects the loss of adequate summer rain as upwelling from a colder ocean resulted from spreading East Antarctic ice **Journal of Vertebrate Paleontology** ,1995 The Bug Creek Problem and the Cretaceous-Tertiary Transition at McGuire Creek, Montana Donald L. Lofgren,1995-08-31 Bug Creek assemblages from Montana transitional in composition between typical Cretaceous and Paleocene vertebrate faunas are critical to K T extinction debates because they have been used to support both gradual and catastrophic K T extinction scenarios Geological and palynological data from McGuire Creek indicate that Bug Creek assemblages are Paleocene and restricted to channel fills entrenched into older sediments suggesting that the Cretaceous component of the assemblage was reworked Thus the author concludes Paleocene dinosaurs are an illusion and the K T survival rate of mammals is low because the presence of Cretaceous mammals in Bug Creek assemblages is also the result of reworking **American Journal of Physical Anthropology** ,1995

Paleontology and Geology of Laetoli: Human Evolution in Context Terry Harrison,2011-01-27 This volume 2 and its companion volume 1 present the results of new investigations into the geology paleontology and paleoecology of the early hominin site of Laetoli in northern Tanzania The site is one of the most important paleontological and paleoanthropological sites in Africa worldrenowned for the discovery of fossils of the early hominin Australopithecus afarensis as well as remarkable trails of its footprints The first volume provides new evidence on the geology geochronology ecology ecomorphology and taphonomy of the site The second volume describes newly discovered fossil hominins from Laetoli belonging to Australopithecus afarensis and Paranthropus aethiopicus and presents detailed information on the systematics and paleobiology of the diverse associated fauna Together these contributions provide one of the most comprehensive accounts of a fossil hominin site and they offer important new insights into the early stages of human evolution and its context *Human Evolution Source Book* Russell L. Ciochon,John G. Fleagle,2016-12-05 For Junior Senior and Graduate courses in Human Evolution taught in anthropology and biology departments This book is the most comprehensive collection of cutting edge articles on human evolution Designed for use by students in anthropology paleontology and evolutionary biology this edited volume brings together the major ideas and publications on human evolution of the past three decades The book spans the entire scope of human evolution with particular emphasis on the fossil record including archaeological

studies *University of California Publications in Geological Sciences* University of California (System),1992 **University of California Publications. Bulletin of the Department of Geological Sciences** University of California, Berkeley,1995
 Bollettino della Società paleontologica italiana ,2009 **Records of the Australian Museum** ,1998 **The Cumulative Book Index** ,1995 A world list of books in the English language **Subject Guide to Books in Print** ,1975
 The Zoological Record ,1995 **The Evolution of the Primate Hand** Tracy L. Kivell,Pierre Lemelin,Brian G. Richmond,Daniel Schmitt,2016-08-10 This book demonstrates how the primate hand combines both primitive and novel morphology both general function with specialization and both a remarkable degree of diversity within some clades and yet general similarity across many others Across the chapters different authors have addressed a variety of specific questions and provided their perspectives but all explore the main themes described above to provide an overarching primitive primate hand thread to the book Each chapter provides an in depth review and critical account of the available literature a balanced interpretation of the evidence from a variety of perspectives and prospects for future research questions In order to make this a useful resource for researchers at all levels the basic structure of each chapter is the same so that information can be easily consulted from chapter to chapter An extensive reference list is provided at the end of each chapter so the reader has additional resources to address more specific questions or to find specific data Primate Adaptation and Evolution John Fleagle,2013-03-08 Primate Adaptation and Evolution Third Edition is a thorough revision of the text of choice for courses in primate evolution The book retains its grounding in the extant primate groups as the best way to understand the fossil trail and the evolution of these modern forms However this coverage is now streamlined making reference to the many new and excellent books on living primate ecology and adaptation a field that has burgeoned since the first edition of Primate Adaptation and Evolution By drawing out the key features of the extant families and referring to more detailed texts the author sets the scene and also creates space for a thorough updating of the exciting developments in primate palaeontology and the reconstruction through early hominid species of our own human origins This updated version covers recent developments in primate paleontology and the latest taxonomy and includes over 200 new illustrations and revised evolutionary trees This text is ideal for undergraduate and post graduate students studying the evolution and functional ecology of primates and early fossil hominids Long awaited revision of the standard student text on primate evolution Full coverage of newly discovered fossils and the latest taxonomy Over 200 new illustrations and revised evolutionary trees
