Evolution And Developmental Psychology:

Evolutionary Perspectives on Child Development and Education David C. Geary, Daniel B. Berch, 2016-04-26 This stimulating volume assembles leading scholars to address issues in children's cognitive, academic and social development through the lens of evolutionary psychology. Debates and controversies in the field highlight the potential value of this understanding from basic early learning skills through emerging social relationships in adolescence with implications for academic outcomes, curriculum development and education policy. Children's evolved tendency toward play and exploration fuels an extended discussion on child versus adult directed learning. Evolutionary bases are examined for young learners' moral development and contemporary theories of learning and memory are viewed from an evolutionary perspective. Along the way, contributors' recommendations illustrate real world uses of evolution based learning interventions during key developmental years. Among the topics covered: The adaptive value of cognitive immaturity; applications of evolutionary developmental psychology to early education; Guided play: a solution to the play versus learning dichotomy; Adolescent bullying in schools: an evolutionary perspective; Fairness: what it isn't, what it is, and what it might be for; Adapting evolution education to a warming climate of teaching and learning; The effects of an evolution informed school environment on student performance and wellbeing. **Evolutionary Perspectives on Child Development and Education** will interest researchers and graduate students working in diverse areas such as evolutionary psychology, cultural anthropology, human ecology, developmental psychology and educational psychology. Researchers in applied developmental science and early education will also find it useful.

Adaptive Origins Peter LaFrenière, 2011-01-07 In this text, students are invited to rethink psychology by grounding it in the natural sciences with the understanding that evolutionary and developmental processes work together with culture to solve problems of human adaptation. These processes are cast as interdependent. Development cannot be understood except in the light of evolutionary theory and the best proof of evolution is the fact of development. For students of evolutionary psychology, all the central topics such as evolved mental modules for theory of mind or language require an understanding of the developmental processes that lead to their expression. Genes, as important as they are, are never the whole story. The role of biological factors is explored in chapters outlining evolution, development, genetics, human origins, hormones and the brain. Then the integrative value of this evolutionary developmental vision in understanding key topics in psychology is illustrated by applying it to traditional areas of inquiry including infancy and attachment, emotions and their expression, social relations with peers, cognitive and language development, sex differences, courtship and mating, violence and aggression, and cooperation and competition.

Origins of the Social Mind Bruce J. Ellis, David F. Bjorklund, 2005-01-01 Applying an evolutionary framework to advance the understanding of child development, this volume brings together leading figures to contribute chapters in their areas of expertise. Researcher and student friendly chapters adhere to a common format.

The Origins of Human Nature David F. Bjorklund, 2009 This book offers readers the first

book length attempt to define the emerging field of evolutionary developmental psychology which applies the basic principles of Darwinian evolution particularly natural selection to explain contemporary human development The authors point out that an evolutionary developmental perspective allows one to interpret aspects of psychological functioning like gene environment interactions and the significance of individual differences differently than an environmental perspective that treats development only superficially Of particular interest are chapters that explore factors influencing parenting and other aspects of family life such as dealing with siblings the role of play from an evolutionary perspective and the interacting roles of an extended juvenile period a big brain and a complex social structure in human cognitive evolution The authors present a hybrid approach to evolution and development pointing out that although underlying assumptions held by evolutionary and developmental psychologists have been at odds each field has much to offer the other This volume will be a useful resource for scholars and others interested in the relation between evolution and psychological development PsycINFO Database Record c 2004 APA all rights reserved

Child Development in Evolutionary Perspective David F. Bjorklund, 2020-10-29 Natural selection has operated as strongly or more so on the early stages of the lifespan as on adulthood One evolved feature of human childhood is high levels of behavioral cognitive and neural plasticity permitting children to adapt to a wide range of physical and social environments Taking an evolutionary perspective on infancy and childhood provides a better understanding of contemporary human development predicting and understanding adult behavior and explaining how changes in the early development of our ancestors produced contemporary Homo sapiens

How Children Invented Humanity David F. Bjorklund, 2020-10-30 Infants and children are the often ignored heroes when it comes to understanding human evolution Evolutionary pressures acted upon the young of our ancestors more powerfully than on adults and changes over the course of development in our ancestors were primarily responsible for the species and the people we have become This book takes an evolutionary developmental perspective emphasizing that developmental plasticity the ability to change our physical and psychological selves early in life is the creative force in evolution with natural selection serving as a filter eliminating novel developmental outcomes that did not benefit survival This book is about becoming of becoming human and of becoming mature adults Bjorklund asks How can an understanding of human development help us better understand human evolution Then turning the relation between evolution and development on its head Bjorklund demonstrates how an understanding of our species evolution can help us better understand current development and how to better rear successful and emotionally healthy children

Evolutionary Perspectives on Human Development Robert L Burgess, Kevin MacDonald, 2004-07-15 Evolutionary Perspectives on Human Development Second Edition considers the role of evolutionary theory in the field of developmental psychology to examine key topics of individual human development This unique book fills an important gap in the literature applying evolutionary models to human development by focusing on central development issues The book emphasizes both domain general evolved psychological mechanisms and domain specific processes The text also integrates behavior genetic research with evolutionary and developmental principles Evolutionary Perspectives on Human Development provides state of the art groundwork in evolutionary theory as viewed by leading thinkers in the field

The Origins of Human Potential Ken Richardson, 2002-09-26 Few scientific debates have been more protracted and intense than whether we are born with our cognitive ability whether our environment moulds it or whether these two things interact to produce it The Origins of Human Potential offers a new insight into the arguments by showing that many of the assumptions on both sides are false Ken Richardson re examines evidence about the nature of genes in development the environment and the development of cognitive ability and the nature of cognitive ability itself Can it really be measured in an IQ test like height or weight Ken Richardson s human centred view describes the evolutionary context of our dynamic changeable environments and the creative individual at the heart of the debate It will be of great relevance to psychologists and education policy makers and should be read by all those with an interest in our children s future

Evolutionary Perspectives on Infancy Sybil L. Hart, David F. Bjorklund, 2022-01-01 This unique volume is one of the first of its kind to examine infancy through an evolutionary lens identifying infancy as a discrete stage during which particular types of adaptations arose as a consequence of certain environmental pressures Infancy is a crucial time period in psychological development and evolutionary psychologists are increasingly recognizing that natural selection has operated on all stages of development not just adulthood

The volume addresses this crucial change in perspective by highlighting research across diverse disciplines including developmental psychology evolutionary developmental psychology anthropology sociology nutrition and primatology Chapters are grouped into four sections Theoretical Underpinnings Brain and Cognitive Development Social Emotional Development Life and Death Evolutionary Perspectives on Infancy sheds new light on our understanding of the human brain and the environments responsible for shaping the brain during early stages of development This book will be of interest to evolutionary psychologists and developmental psychologists biologists and anthropologists as well as scholars more broadly interested in infancy

Applied Evolutionary Psychology S. Educating the Evolved Mind Jerry Carlson, Joel R. Levin, 2007-06-01 In this volume David Geary provides a comprehensive theory that brings children's education into the 21st century and provides directions for the development of a new discipline evolutionary educational psychology Geary presents the case that a scientifically grounded approach to children's schooling and to a lesser degree their later occupational interests can be informed by recent advances in the application of evolutionary theory to the understanding of the human brain mind and its development He develops a taxonomy of evolved cognitive abilities and describes how from an evolutionary perspective these abilities are modified and refined during childhood From there he lays the framework for understanding the relation between evolved abilities such as language and the non evolved competencies that are built from them with schooling such as reading Geary describes the mechanisms such as working memory that enable humans to transform evolved cognitive abilities into culturally important school taught competencies These are integrated with discussion of human intellectual history and cultural evolution and the sources of children's motivation to learn inside and outside of the classroom In all this may well be the most revolutionary

theory of children's schooling since Rousseau Evolution, Development, and Children's Learning Harold D. Fishbein, 1976

Origins of the Social Mind Shoji Itakura, Kazuo Fujita, 2009-02-11 During the first few years of life children acquire knowledge about the relationships between their own mental states, their actions and the social world. This information is then used to understand themselves and others. Humans are born into families where they are raised and learn to cooperate, compete and communicate. We are social creatures and over the course of development we learn about people, relationships, social systems and others' minds. In addition, not only do we live socially, we think socially as well. However, human adults are not the only creatures to live and think socially. In recent years, sophisticated experiments have provided new information about social cognition in human infants and nonhuman animals. In this book, we focus on the developmental and evolutionary origins of the social mind, bringing together the currently segregated views on social cognition in the two fields. Ever since the term 'theory of mind' was coined by D. Premack nearly 30 years ago, the concept has been the main topic of social cognition research both in developmental psychology and in primatology. However, few attempts have been made to integrate these two research domains. Just recently, researchers from the two areas collaborated to publish a book on this topic, but the volume was little more than a collection of independent papers. This book overcomes that limitation by presenting new data and their implications from both developmental and evolutionary points of view. Piaget, Evolution, and Development Jonas

Langer, Melanie Killen, 1998-06-01 Based on the 25th Anniversary Symposium of the Jean Piaget Society, this book represents cutting-edge work on the mechanisms of cognitive, social and cultural development. The authors, anthropologists, biologists, historians of science, paleontologists and psychologists, believe that a rebirth is in progress relating to the study of these mental developments. This volume seeks to illuminate this rebirth. The varied findings and approaches reported reveal that contemporary comparative research on mental development is in a phase of differentiation and integration. Far from being global and fused, this comparative study is a flowering field of diverse disciplinary approaches, empirical phenomena, scholarly topics and theoretical perspectives. It focuses on the comparative phylogeny, ontogeny and history of mentation, most notably on the comparative onset and offset ages, velocity, extent, sequencing, organization of thought, symbol and value development. The world's leading authorities on the subject discuss the implications of the study of evolution for our models of the ontogenetic origins, development and history of mentation, as well as determine the constraints that evolution imposes on mental development. Bringing the current interest in primate cognition to bear on studies of cognitive development in humans, this book will be of interest to cognitive developmentalists, primatologists and comparative psychologists. *The SAGE Handbook of Evolutionary Psychology* Todd K. Shackelford, 2020-11-25 Evolutionary psychology is an important and rapidly expanding area in the life, social and behavioral sciences, and this Handbook represents the most comprehensive and up-to-date reference text in the field today. Chapters in this Handbook address theory and research that integrates evolutionary psychology with other life, social and behavioral sciences, as well as with the humanities. Psychology is an essential resource for researchers graduate students and advanced undergraduate students in all areas of psychology and in related disciplines across the life social and behavioral sciences Part 1 Integration within Psychology Part 2 Integration with other Life Social and Behavioral Sciences Part 3 Integration with the Humanities **Foundations of Evolutionary Psychology** Charles Crawford, Dennis Krebs, 2012-10-12 Evolutionary psychology is concerned with the adaptive problems early humans faced in ancestral human environments the nature of the psychological mechanisms natural selection shaped to deal with those ancient problems and the ability of the resulting evolved psychological mechanisms to deal with the problems people face in the modern world Evolutionary psychology is currently advancing our understanding of altruism moral behavior family violence sexual aggression warfare aesthetics the nature of language and gender differences in mate choice and perception It is helping us understand the relationships between cognitive science developmental psychology behavior genetics personality and social psychology Foundations of Evolutionary Psychology provides an up to date review of the ideas issues and applications of contemporary evolutionary psychology It is suitable for senior undergraduates first year graduate students or professionals who wish to become conversant with the major issues currently shaping the emergence of this dynamic new field It will be interesting to psychologists anthropologists sociologists economists philosophers cognitive scientists and anyone interested in using new developments in the theory of evolution to gain new insights into human behavior *Evolution, Early Experience and Human Development* Darcia Narváez, 2012-11-29 The field of cognitive psychology has expanded rapidly in recent years with experts in affective and cognitive neuroscience revealing more about mammalian brain function than ever before In contrast psychological problems such as ADHD autism anxiety and depression are on the rise as are medical conditions such as diabetes obesity and autoimmune disorders Why in this era of unprecedented scientific self knowledge does there seem to be so much uncertainty about what human beings need for optimal development Evolution Early Experience and Human Development asserts that human development is being misshaped by government policies social practices and public beliefs that fail to consider basic human needs In this pioneering volume scientists from a range of disciplines theorize that the increase in conditions such as depression and obesity can be partially attributed to a disparity between the environments and conditions under which our mammalian brains currently develop and our evolutionary heritage For example healthy brain and emotional development depends to a significant extent upon caregiver availability and quality of care These include practices such as breastfeeding co sleeping and parental social support which have waned in modern society but nevertheless may be integral to healthy development As the authors argue without a more informed appreciation of the ideal conditions under which human brains minds develop and function human beings will continue to struggle with suboptimal mental and physical health and as problems emerge psychological treatments alone will not be effective The best approach is to recognize these needs at the outset so as to optimize child development Evolution Early Experience and Human Development puts forth a logical empirically based

argument regarding human mammalian needs for optimal development based on research from anthropology neurobiology animal science and human development The result is a unique exploration of evolutionary approaches to human behavior that will support the advancement of new policies new attitudes towards health and alterations in childcare practices that will better promote healthy human development
