Grose,2006-10 The historic Science Textbook Struggle a worldwide battle about the origin of the universe life and man erupted without warning It caught the scientific illuminati completely by surprise Why Because science textbooks had become filled with wild unbelievable stories about the beginning of everything And those tales were simply not scientific The universe starting with a Big Bang life arising out of a soup of lifeless amino acids humans produced by apes those myths had only replaced ancient Greek mythology and were being passed off as scientific truths Caught in the crossfire between educators news media textbook publishers religious notables and world renowned scientists including nineteen Nobel laureates was a private citizen Father of six schoolchildren he had only one goal to prove that science never will have answers for origins He was up against the arrogance of scientists who were determined to disguise their private beliefs as being the only explanations for the origin of the universe life and man This story concludes with a great victory for objectivity with more than 200 changes being made in textbooks over the objections of the National Academy of Sciences All discussion about origins was transformed by admission that stories about them are based solely on personal views of individual scientists Remarkably 3 000 scientists around the world later signed an affirmation to assure that this issue of belief over fact in science never be repeated Wernher von Braun father of America s space program writes in the Foreword Vernon Grose in tracing out in Science But Not Scientists his personal involvement in the vortex of these two forces illustrates one more time the humanity of scientists their likelihood of being just as prejudiced and bigoted as anyone untrained in science He properly calls for objectivity rather than scientific consensus He rightly urges that message rather than messenger should be scrutinized and tested for validity Science will be the richer and humanity the ultimate beneficiary by heeding this clarion call     **Machine Ethics** Luís Moniz Pereira,António Barata Lopes,2020-01-22 This book offers the first systematic guide to machine ethics bridging between computer science social sciences and philosophy Based on a dialogue between an AI scientist and a novelist philosopher the book discusses important findings on which moral values machines can be taught and how In turn it investigates what kind of artificial intelligence AI people do actually want What are the main consequences of the integration of AI in people s every day life In order to co exist and collaborate with humans machines need morality but which moral values should we teach them Moreover how can we implement benevolent AI These are just some of the questions carefully examined in the book which offers a comprehensive account of ethical issues concerning AI on the one hand and a timely snapshot of the power and potential benefits of this technology on the other Starting with an introduction to common sense ethical principles the book then guides the reader helping them develop and understand more complex ethical concerns and placing them in a larger technological context The book makes these topics accessible to a non expert audience while also offering alternative reading pathways to inspire more specialized readers
