## **Intraoperative Irradiation Techniques And Results:**

**Intraoperative Irradiation** Leonard L. Gunderson, Christopher G. Willett, Felipe A. Calvo, Louis B. Harrison, 2011-04-15  
The rationale for using intraoperative irradiation IORT is based on the realization that tolerable doses of external beam radiation are often insufficient to achieve control of locally advanced malignancies. In these instances the IORT component of treatment becomes the optimal conformal technique of irradiation since dose limiting organs or structures can either be surgically displaced or protected by placement of lead shielding. This fully revised and expanded second edition is of interest to those with intraoperative electron IOERT capabilities, high dose rate brachytherapy HDR IORT capabilities or both. Techniques, indications and results are discussed by disease site. Each chapter is dual authored by a radiation oncologist and a surgeon, giving a balanced presentation of clinical scenarios. Issues of basic science and physics are also covered, and a notable chapter on normal tissue tolerance is included. *Intraoperative Irradiation Techniques and Results* Second Edition is a superb compilation providing essential cutting edge knowledge. It is a foundation for physicians as IORT develops and becomes more widely available.

*Intraoperative Irradiation* Leonard L. Gunderson, Christopher G. Willett, Louis B. Harrison, Felipe A. Calvo, 1999-02-22  
International radiation oncologists, surgeons and scientists comprehensively review the techniques, indications and results of using intraoperative electrons IOERT and high dose rate brachytherapy HDR IORT. State of the art topics range from methods and techniques of treatment and issues of normal tissue organ tolerance to IORT to techniques and results by disease site, as well as future possibilities. The disease site chapters cover every body part for which the potential merit of IORT has been demonstrated, with disease specific treatment factors presented by a radiation oncologist and a surgeon. The diseases range from GI cancers to CNS and breast malignancies. International in authorship and comprehensive in scope, *Intraoperative Irradiation Techniques and Results* offers a cutting edge resource and reference for surgeons, radiation oncologists, physicists, anesthesiologists, medical oncologists and all others involved in providing IORT and HDR IORT procedures and cancer care today.

*Perez and Brady's Principles and Practice of Radiation Oncology*

**Hepato-Pancreato-Biliary Malignancies** Cataldo Doria, Jason N. Rogart, 2022-09-30 Hepato-Pancreato-Biliary cancers are increasing in incidence, with pancreatic cancer now accounting for the third most cancer deaths in the United States. Typically, these malignancies as a group are managed by the same key providers comprising a multidisciplinary team. This book is intended to provide a comprehensive review of the current knowledge in the field of hepato-pancreato-biliary malignancies, focusing on the practical and clinical care of patients. We take the approach of combining the collective expertise of an interventional gastroenterologist and a hepato-pancreato-biliary surgeon to provide the readers with accurate, succinct, and pragmatic information needed to formulate the most appropriate treatment plan for their patients, with the aim of the best possible outcome. Managing patients with these cancers continues to be challenging because of continued dismal

survival rates Each section in this text is written by experts in their respective field summarizing the most state of the art contemporary diagnostic and therapeutic tools available in the field We believe this book will prove to be an invaluable comprehensive resource for all members of the multidisciplinary team caring for patients with hepato pancreato biliary malignancies
