Mollison's Blood Transfusion in Clinical Medicine Harvey G. Klein,David J. Anstee,2013-11-14 Mollison's Blood Transfusion in Clinical Medicine is an icon in the field of transfusion and the first edition was published in 1951 The book arose from the concept of the transfusionist as both scientist and expert consultant For many years this text has provided the primary and often the sole reference for detailed information and practical experience in blood transfusion The book is completely revised and updated throughout to include the latest advances and developments in the field

Blood, Plasma, and Plasma Proteins José Luis Valverde,2006 Labile blood products and plasma derived products are very sensitive from a social viewpoint Along with the challenges faced by all medicinal products there is an added challenge due to the lack of raw material and the social problems with regards to their acquisition Obtaining them depends on blood and plasma donations which are insufficient Europeans as a whole fail to even cover 40 % of their needs in plasma for fractionation The aspiration that all donations shall be voluntary free and unpaid is an altruistic objective which reality unfortunately contradicts every day Governments and all social Agencies should promote to the maximum its actions in order to achieve the greatest number of donation each day Even from a humanitarian or ethical viewpoint nobody can deny a possible donor accepting incentives This incentive discussion plus the concept of self sufficiency of countries and more are discussed in this volume Sleep Medicine in Clinical Practice Michael H. Intravenous Immunoglobulins Andreas Morell, U. E. Nydegger, 1986 From the Preface The main purpose of this book is to acquaint clinicians with the essentials of immunoglobulin treatment It summarizes recent clinical and experimental studies and reflects current ideas on indications for polyvalent and specific immunoglobulin preparations The book contains original papers from many distinguished investigators which were presented at a workshop on the clinical use of intravenous immunoglobulins held at Interlaken in September 1985 IVIG Therapy Today Mark Ballou, 2012-12-06 It has been little more than a century since Emil von Behring and his colleagues 1890 showed that the blood of tetanus immune rabbits contained a factor that could be transferred to nonimmune animals to protect them against tetanus These observations together with the work of Paul Ehrlich started scientists on the long and complex path to our present understanding of the humoral or B cell immune system These early studies led to Nobel prize awards for von Behring 1901 and Ehrlich 1908 each of whom contributed much to our knowledge of the B cell immune system In the early 20th century it was recognized that the serum of individuals who had recently suffered an infection contained a protective humoral factor that could be transferred to a nonimmune person thereafter affording that individual protection against the infectious agent that had caused disease In 1933 McKhann and Chu reported that a placental extract containing the globulin fraction could modify measles However it was not until 1939 that Tiselius and Kabat demonstrated that the antibodies responsible for protection against these infectious disorders resided within the gammaglobulin plasma fraction In a major step forward Cohn in 1944 established a method for the fractionation and purification of this plasma gammaglobulin fraction These procedures which are based on cold ethanol precipitation of plasma produce a readily adaptable large scale fractionation procedure that is still utilized to this day in the preparation of commercial gammaglobulin The Art & Science of Assisted Reproductive Techniques (ART) Gautam N Allahbadia, 2017-07-17 This second edition has been extensively revised to bring clinicians fully up to date with the latest technologies and advances in the field of assisted reproductive techniques ART Each section is dedicated to a sub specialty from polycystic ovary syndrome ART procedures and laboratory issues to implantation cryopreservation endoscopy

ultrasound and more A section entitled contemporary thoughts examines the improvement of IVF outcome ART and older women and HIV and ART and another discusses third party reproduction Edited by internationally recognised experts in reproductive medicine this comprehensive guide is highly illustrated with clinical photographs and diagrams to enhance learning Previous edition 9781841844497 published in 2004 Key points Fully revised second edition providing latest advances in ART Complete section dedicated to third party reproduction Highly experienced internationally recognised editor and author team Previous edition 9781841844497 published in 2004
