- Logically equivalent—no matter what the input values are, the results are the same for both expressions
- \vee is or inclusive, \wedge is and
- gamma entails: Galois Theorem
 - Gamma is a set of premises, and means entails
 - Whenever this is true, the other one is true
 - Different than implies only because it is more abstracted and more meta

 - Empty set: means that every interpretation satisfies A, because p and q have no effect on A
 - We say A is valid or a tautology
 - If no matter what the interpretation of the premises, it is always true

Topics in Latin Philosophy from the 12th-14th centuries Sten Ebbesen, 2017-05-15 Sten Ebbesen has contributed many works in the field of ancient and medieval philosophy over decades of dedicated research. His crisp and lucid style and his philosophical penetration of often difficult concepts and issues is both clear and intellectually impressive. Ashgate is proud to present this thematically arranged three volume set of his collected essays, each thoroughly revised and updated. Volume Two: Topics in Latin Philosophy from the 12th-14th Centuries explores issues in medieval philosophy from the time nominalists and other schools competed in twelfth century Paris to the mature scholasticism of Boethius of Dacia, Radulphus Brito and other modest thinkers of the late thirteenth century and finally the new nominalism of John Buridan in the fourteenth century.
