Development for Embedded Systems Colin Atkinson, Christian Bunse, Hans-Gerhard Gross, Christian Peper, 2005-11-19

Embedded systems are ubiquitous They appear in cell phones microwave ovens refrigerators consumer electronics cars and jets Some of these embedded systems are safety or security critical such as in medical equipment nuclear plants and X by wire control systems in naval ground and aerospace transportation vehicles With the continuing shift from hardware to software embedded systems are increasingly dominated by embedded software Embedded software is complex Its engineering inherently involves a multidisciplinary interplay with the physics of the embedding system or environment Embedded software also comes in ever larger quantity and diversity The next generation of premium automobiles will carry around one gigabyte of binary code The proposed US DDX submarine is effectively a floating embedded software system comprising 30 billion lines of code written in over 100 programming languages Embedded software is expensive Cost estimates are quoted at around US 15 30 per line from commencement to shipping In the defense realm costs can range up to 100 while for highly critical applications such as the Space Shuttle the cost per line approximates 1 000 In view of the exponential increase in complexity the projected costs of future embedded software are staggering The Engineering Design of Systems Dennis M.

Buede, William D. Miller, 2024-03-14 The Engineering Design of Systems Comprehensive resource covering methods to design verify and validate systems with a model based approach addressing engineering of current software centric systems The newly revised and updated Fourth Edition of The Engineering Design of Systems includes content addressing model based systems engineering digital engineering digital threads AI SysML 1.0 and 2.0 digital twins and GENESYS software The
