because every technology including databases becomes standardized over time The history of databases shows periods of chaos followed by periods of dominant technologies For example in the early days of computing users stored their data in text files in any format and organization they wanted These early days were followed by information retrieval systems which required some structure for text documents such as a title authors and a publisher The information retrieval systems were followed by database systems which added even more structure to the data and made querying easier In the late 1990s the emergence of the Internet brought a period of relative chaos and interest in unstructured and semistructured data as it was envisioned that every web page would be like a page in a book However with the growing maturity of the Internet the interest in structured data was regained because the most popular websites are in fact based on databases The question is not whether future data stores need structure but what structure they need
