Introduction To Abelian Varieties Crm Monograph S:

Introduction to Abelian Varieties Vijaya Kumar Murty, 1993 This book presents an elementary and self contained approach to Abelian varieties a subject that plays a central role in algebraic and analytic geometry number theory and complex analysis The book is based on notes from a course given at Concordia University and would be useful for independent study or as a textbook for graduate courses in complex analysis Riemann surfaces number theory or analytic geometry Murty works mostly over the complex numbers discussing the theorem of Abel Jacobi and Lefschetz s theorem on projective embeddings After presenting some examples Murty touches on Abelian varieties over number fields as well as the conjecture of Tate Faltings s theorem and its relation to Mordell s conjecture References are provided to guide the reader in further study *Current Trends in Number Theory* S.D. Adhikari, S. A. Katre, B. Ramakrishnan, 2002-01-01 *Twisted Teichmüller Curves* Christian Weiß, 2014-02-21 These notes introduce a new class of algebraic curves on Hilbert modular surfaces These curves are called twisted Teichmüller curves because their construction is very reminiscent of Hirzebruch Zagier cycles These new objects are analyzed in detail and their main properties are described In particular the volume of twisted Teichmüller curves is calculated and their components are partially classified The study of algebraic curves on Hilbert modular surfaces has been widely covered in the literature due to their arithmetic importance Among these twisted diagonals Hirzebruch Zagier cycles are some of the most important examples **Non-vanishing of L-Functions and Applications** M. Ram Murty, V. Kumar Murty, 2012-01-05 This volume develops methods for proving the non vanishing of certain L functions at points in the critical strip It begins at a very basic level and continues to develop providing readers with a theoretical foundation that allows them to understand the latest discoveries in the field **Harmonic Analysis, the Trace Formula, and Shimura Varieties** Clay Mathematics Institute. Summer School, 2005 Langlands program proposes fundamental relations that tie arithmetic information from number theory and algebraic geometry with analytic information from harmonic analysis and group representations This title intends to provide an entry point into this exciting and challenging field *Bulletin of the American Mathematical Society*, 1995 *Compactifying Moduli Spaces for Abelian Varieties* Martin C. Olsson, 2008-08-25 This volume presents the construction of canonical modular compactifications of moduli spaces for polarized Abelian varieties possibly with level structure building on the earlier work of Alexeev Nakamura and Namikawa This provides a different approach to compactifying these spaces than the more classical approach using toroidal embeddings which are not canonical There are two main new contributions in this monograph 1 The introduction of logarithmic geometry as understood by Fontaine Illusie and Kato to the study of degenerating Abelian varieties and 2 the construction of canonical compactifications for moduli spaces with higher degree polarizations based on stack theoretic techniques and a study of the theta group **Lectures on Hilbert Modular Varieties and Modular Forms** Eyal Zvi Goren, 2002 This book is devoted to certain aspects of the theory of p adic Hilbert modular forms and moduli spaces of

abelian varieties with real multiplication The theory of p adic modular forms is presented first in the elliptic case introducing the reader to key ideas of N M Katz and J P Serre It is re interpreted from a geometric point of view which is developed to present the rudiments of a similar theory for Hilbert modular forms The theory of moduli spaces of abelian varieties with real multiplication is presented first very explicitly over the complex numbers Aspects of the general theory are then exposed in particular local deformation theory of abelian varieties in positive characteristic The arithmetic of p adic Hilbert modular forms and the geometry of moduli spaces of abelian varieties are related This relation is used to study q expansions of Hilbert modular forms on the one hand and stratifications of moduli spaces on the other hand The book is addressed to graduate students and non experts It attempts to provide the necessary background to all concepts exposed in it It may serve as a textbook for an advanced graduate course

Automorphic Forms Beyond GL_2 Ellen Elizabeth Eischen, Wee Teck Gan, Aaron Pollack, Zhiwei Yun, 2024-03-26 The Langlands program has been a very active and central field in mathematics ever since its conception over 50 years ago It connects number theory representation theory and arithmetic geometry and other fields in a profound way There are nevertheless very few expository accounts beyond the GL_2 case This book features expository accounts of several topics on automorphic forms on higher rank groups including rationality questions on unitary group theta lifts and their applications to Arthur's conjectures quaternionic modular forms and automorphic forms over function fields and their applications to inverse Galois problems It is based on the lecture notes prepared for the twenty fifth Arizona Winter School on Automorphic Forms beyond GL_2 held March 5-9 2022 at the University of Arizona in Tucson The speakers were Ellen Eischen Wee Teck Gan Aaron Pollack and Zhiwei Yun The exposition of the book is in a style accessible to students entering the field Advanced graduate students as well as researchers will find this a valuable introduction to various important and very active research areas Nonarchimedean and Tropical Geometry Matthew Baker, Sam Payne, 2016-08-18 This volume grew out of two Simons Symposia on Nonarchimedean and tropical geometry which took place on the island of St John in April 2013 and in Puerto Rico in February 2015 Each meeting gathered a small group of experts working near the interface between tropical geometry and nonarchimedean analytic spaces for a series of inspiring and provocative lectures on cutting edge research interspersed with lively discussions and collaborative work in small groups The articles collected here which include high level surveys as well as original research mirror the main themes of the two Symposia Topics covered in this

volume include Differential forms and currents and solutions of Monge Ampere type differential equations on Berkovich spaces and their skeletons The homotopy types of nonarchimedean analytifications The existence of faithful tropicalizations which encode the topology and geometry of analytifications Relations between nonarchimedean analytic spaces and algebraic geometry including logarithmic schemes birational geometry and the geometry of algebraic curves Extended notions of tropical varieties which relate to Huber's theory of adic spaces analogously to the way that usual tropical varieties relate to Berkovich spaces and Relations between nonarchimedean geometry and combinatorics including deep and fascinating connections between matroid theory tropical geometry and Hodge theory **Catalogue** American Mathematical Society, 2000
