Applied Time Series Econometrics Geda, Alemayehu, 2015-03-16 This book attempts to demystify time series econometrics so as to equip macroeconomic researchers focusing on Africa with solid but accessible foundation in applied time series techniques that can deal with challenges of developing economic models using African data

Applied Time Series Econometrics Helmut Lütkepohl, Markus Krätzig, 2004-08-02 Time series econometrics is a rapidly evolving field Particularly the cointegration revolution has had a substantial impact on applied analysis Hence no textbook has managed to cover the full range of methods in current use and explain how to proceed in applied domains This gap in the literature motivates the present volume The methods are sketched out reminding the reader of the ideas underlying them and giving sufficient background for empirical work The treatment can also be used as a textbook for a course on applied time series econometrics Topics include unit root and cointegration analysis structural vector autoregressions conditional heteroskedasticity and nonlinear and nonparametric time series models Crucial to empirical work is the software that is available for analysis New methodology is typically only gradually incorporated into existing software packages Therefore a flexible Java interface has been created allowing readers to replicate the applications and conduct their own analyses

In this textbook the duality between the equilibrium concept used in dynamic economic theory and the stationarity of economic variables is explained and used in the presentation of single equations models and system of equations such as VARs, recursive models and simultaneous equations models. The book also contains chapters on exogeneity in the context of estimation, policy analysis and forecasting, automatic computer based variable selection and how it can aid in the specification of an empirical macroeconomic model and finally on a common framework for model based economic forecasting. Supplementary materials and notes are available on the publisher's website.

Econometric Methods with Applications in Business and Economics C. Heij, 2004-03-25
Nowadays applied work in business and economics requires a solid understanding of econometric methods to support decision making. Combining a solid exposition of econometric methods with an application oriented approach, this rigorous textbook provides students with a working understanding and hands on experience of current econometrics. Taking a learning by doing approach, it covers basic econometric methods: statistics, simple and multiple regression, nonlinear regression, maximum likelihood and generalized method of moments, and addresses the creative process of model building with due attention to diagnostic testing and model improvement. Its last part is devoted to two major application areas: the econometrics of choice data (logit and probit, multinomial and ordered choice, truncated and censored data and duration data) and the econometrics of time series data (univariate time series, trends, volatility, vector autoregressions) and a brief discussion of SUR models, panel data and simultaneous equations. Real world text examples and practical exercise questions stimulate active learning and show how econometrics can solve practical questions in modern business and economic management. Focuses on the core of econometrics: regression and covers two major advanced topics: choice data with applications in marketing and micro economics and time series data with applications in finance and macro economics. Learning support features include concise manageable sections of text, frequent cross references to related and background material, summaries, computational schemes, keyword lists, suggested further reading, exercise sets and online data sets and solutions. Derivations and theory exercises are clearly marked for students in advanced courses. This textbook is perfect for advanced undergraduate students, new graduate students and applied researchers in econometrics, business and economics and for researchers in other fields that draw on modern applied econometrics.
