The Medical Library Association Guide to Data Management for Librarians Lisa Federer, 2016-09-15. Technological advances and the rise of collaborative interdisciplinary approaches have changed the practice of research. The 21st century researcher not only faces the challenge of managing increasingly complex datasets but also new data sharing requirements from funders and journals. Success in today's research enterprise requires an understanding of how to work effectively with data yet most researchers have never had any formal training in data management. Libraries have begun developing services and programs to help researchers meet the demands of the data driven research enterprise giving librarians exciting new opportunities to use their expertise and skills. The Medical Library Association Guide to Data Management for Librarians highlights the many ways that librarians are addressing researchers changing needs at a variety of institutions including academic hospital and government libraries. Each chapter ends with pearls of wisdom a bulleted list of 5-10 takeaway messages from the chapter that will help readers quickly put the ideas from the chapter into practice. From theoretical foundations to practical applications this book provides a background for librarians who are new to data management as well as new ideas and approaches for experienced data librarians.

An Introduction to Data Science Jeffrey S. Saltz, Jeffrey M. Stanton, 2017-08-25 An Introduction to Data Science is an easy to read gentle introduction for advanced undergraduate certificate and graduate students coming from a wide range of backgrounds into the world of data science After introducing the basic concepts of data science the book builds on these foundations to explain data science techniques using the R programming language and RStudio from the ground up Short chapters allow

instructors to group concepts together for a semester course and provide students with manageable amounts of information for each concept. By taking students systematically through the R programming environment, the book takes the fear out of data science and familiarizes students with the environment so they can be successful when performing advanced functions. The authors cover statistics from a conceptual standpoint focusing on how to use and interpret statistics rather than the math behind the statistics. This text then demonstrates how to use data effectively and efficiently to construct models, predict outcomes, visualize data, and make decisions. Accompanying digital resources provide code and datasets for instructors and learners to perform a wide range of data science tasks.

The papers deal with the following topics: data mining, decision support systems, data analytics, data and information quality, digital rights management, big data, knowledge management, ontology engineering, digital libraries, mobile databases, object-oriented database systems, data integrity.

Geographical Data Science and Spatial Data Analysis Lex Comber, Chris Brunsdon, 2020-12-02. We are in an age of big data where all of our everyday interactions and transactions generate data. Much of this data is spatial; it is collected somewhere and identifying analytical insight from trends and patterns in these increasing rich digital footprints presents a number of challenges. Whilst other books describe different flavours of Data Analytics in R and other programming languages, there are none that consider Spatial Data, i.e. the location attached to data, or that consider issues of inference linking Big Data, Geography, GIS Mapping, and Spatial Analytics. This is a learning-by-doing textbook building on the previous book by the same authors, *An Introduction to R for Spatial Analysis and Mapping*. It details the theoretical issues in analyses of Big Spatial Data and developing practical skills in the reader for addressing these with confidence.
