Introduction to Forest Resource Management William A. Leuschner, 1984

Resources Donald L. Grebner, Pete Bettinger, Jacek P. Siry, Kevin Boston, 2021-01-19 *Introduction to Forestry and Natural Resources* Second Edition presents a broad completely updated overview of the profession of forestry. The book details several key fields within forestry including forest management, economics, policy, utilization, and forestry careers. Chapters deal specifically with forest regions of the world, landowners, forest products, wildlife habitats, tree anatomy and physiology, and forest disturbances and health. These topics are ideal for undergraduate introductory courses and include numerous examples and questions for students to ponder. There is also a section dedicated to forestry careers. Unlike other introductory forestry texts which focus largely on forest ecology rather than practical forestry concepts, this book encompasses the economic, ecological, and social aspects, thus providing a uniquely balanced text. The wide range of experience of the contributing authors equips them especially well to identify missing content from other texts in the area and address topics currently covered in corresponding college courses. Covers the application of forestry and natural resources around the world with a focus on practical applications and graphical examples. Describes basic techniques for measuring and evaluating forest resources and natural resources including fundamental terminology and concepts. Includes management policies and their influence at the local, national, and international levels.

Forest Management and Planning Pete Bettinger, Kevin Boston, Jacek P. Siry, Donald L. Expanded coverage includes a case study of a closed canopy, uneven-aged forest, new forest plans from South America and Oceania, and a new chapter on scenario planning and climate change adaptation. Helps students and early career forest managers understand the problems facing professionals in the field today. Designed to support land managers as they make complex decisions on the ecological, economic, and social impacts of forest and natural resources. Presents updated real-life examples that are illustrated both mathematically and graphically. Includes a new chapter on scenario planning and climate change adaptation. Incorporates the newest research and forest certification standards. Offers access to a companion website with updated solutions, geographic databases, and illustrations.
