Elsevier's Electronic Bibliography Z. Deyl, J. Janák, V. Schwarz, 2000 This bibliography is the updated and revised edition of Elsevier's Electronic Bibliography Analytical Separations that was first published in 1998. Covering the years 1990 to 1999, this new edition deals with all categories of chromatographic and electromigration types of separation. The basic categories of classification are techniques and applications. For each of the 100 000 articles, the authors' names, full title, journal of publication, and page numbers are given. The complete bibliography can be fully searched on these areas as well as technique and subject. Additional features: Now covering the years 1989-1999. Includes ca. 20 000 new articles in separation science. Yearly updates to follow. Search time is reduced with a new user interface. Customised searches on author, title, journal, year of publication, technique, and subject. To facilitate searches, articles have been classified by a team of experts in 150 unique categories. Users can print and/or save the results of database searches using the Built-in Report Function. The MakeRef Function allows for insertion of bibliographic information directly into documents. The whole database has been structured into a format that allows for migration to a web environment.

Separations Chemistry Fedor Macášek, James D. Navratil, 2016-06-06 Separation of chemical species is a gate to final success of synthesis and preparation of compounds in pure and defined state. Variability of natural and artificial mixtures to be treated is enormous. Task of chemistry is to separate components of homogeneous mixtures: the gaseous and liquid solutions. The book concentrates on understanding the basic philosophies of both equilibrium and nonequilibrium chemical thermodynamics and engineering performance that lay in principle of separation technique such as distillation, crystallization, centrifugation, sorption, membrane separations, chromatography, and liquid-liquid extraction. Specific phenomena connected with photochemical separation, isotope composition, and radioactivity are discussed as well. The book is written for advanced students of chemistry having the knowledge of physical chemistry. Calculation examples are based on the international system of units. Unique list of over 1300 full references covers scientific literature of the eighteenth to the twenty-first centuries.

A Century of Separation Science Haleem J. Issaq, 2001-12-19 A Century of Separation Science presents an extensive overview of the critical developments in separation science since 1900, covering recent advances in chromatography, electrophoresis, field-flow fractionation, countercurrent chromatography, and supercritical fluid chromatography for high speed and high throughput analysis.

Independent Component Analysis and Blind Signal Separation Carlos G. Puntonet, 2004-09-17 In many situations found both in Nature and in human built systems a set of mixed signals is observed frequently also with noise and it is of great scientific and technological relevance to be able to isolate or separate them so that the information in each of the signals can be utilized Blind source separation BSS research is one of the more interesting emerging fields nowadays in the field of signal processing It deals with the algorithms that allow the recovery of the original sources from a set of mixtures only The adjective blind is applied because the purpose is to estimate the original sources without any a priori knowledge about either the sources or the mixing system Most of the models employed in BSS assume the hypothesis about the independence of the original sources Under this hypothesis a BSS problem can be considered as a particular case of independent component analysis ICA a linear transformation technique that starting from a multivariate representation of the data minimizes the statistical dependence between the components of the representation It can be claimed that most of the advances in ICA have been motivated by the search for solutions to the BSS problem and the other way around advances in ICA have been immediately applied to BSS ICA and BSS algorithms start from a mixture model whose parameters are estimated from the observed mixtures Separation is achieved by applying the inverse mixture model to the observed signals

separating or mixing model. Mixture models usually fall into three broad categories: instantaneous linear models, convolutional models, and nonlinear models. The first being the simplest but in general not near realistic applications. The development and test of the algorithms can be accomplished through synthetic data or with real world data. Obviously the most important aim and most difficult is the separation of real world mixtures. BSS and ICA have strong relations also apart from signal processing with other fields such as statistics and artificial neural networks. As long as we can find a system that emits signals propagated through a medium and those signals are received by a set of sensors and there is an interest in recovering the original sources, we have a potential field of application for BSS and ICA. Inside that wider range of applications we can find for instance noise reduction applications, biomedical applications, audio systems, telecommunications, and many others. This volume comes out just 20 years after the first contributions in ICA and BSS [1] appeared. Thereafter, the number of research groups working in ICA and BSS has been constantly growing so that nowadays we can estimate that far more than 100 groups are researching in these fields. As proof of the recognition among the scientific community of ICA and BSS developments, there have been numerous special sessions and special issues in several well-known journals. J. Herault, B. Ans, "Circuits neuronaux synapses modifiables d'encodage de messages complexes pour apprentissage non supervisé", C. R. de l'Académie des Sciences, vol. 299, no. III, pp. 525-528, 1984.
