*Goldilocks and the Water Bears* Louisa Preston, 2016-06-16 Highly recommended. Financial Times Today we know of only a single planet that hosts life: the Earth. But across a Universe of at least 100 billion possibly habitable worlds, surely our planet isn't the only one which, like the porridge Goldilocks sought, is just right for life. Astrobiologists search the galaxy for conditions that are suitable for life to exist, focusing on similar worlds located at the perfect distance from their Sun within the aptly named Goldilocks Zone. Such a place might have liquid water on its surface and may therefore support a thriving biosphere. What might life look like on other worlds? It is possible to make best guesses using facts rooted in science and by studying extremophiles, organisms such as the near indestructible water bears which can survive in the harshest conditions that Earth and even space can offer. *Goldilocks and the Water Bears* is a tale of the origins and evolution of life and the quest to find it on other planets, on moons in other galaxies and throughout the Universe.

**The Genesis of Germs** Alan Gillen, 2007 As the world waits in fear, the CDC and world health organizations

race to minimize the current pandemic a looming threat that has forced international federal and local governments to deal with COVID19 and other future epidemics and the widespread death and devastation which would follow Will the world find the answers in time Or will we see a deadly threat ravage populations as others have before in 1918 with influenza in the late 18th century with yellow fever or the horrific black death or bubonic plague in 1347 AD Are these viruses examples of evolution Did God make microbes by mistake Are they accidents of evolution out of the primordial soup These timely questions are examined throughout this book from chapter 1 It seems that a new and more terrible disease is touted on the news almost daily The spread of these scary diseases from avian flu to SARS to AIDS is a cause for concern and leads to questions such as Where did all these germs come from How do they fit into a biblical world view What kind of function did these microbes have before the Fall Does antibiotic resistance in bacteria prove evolution How can something so small have such a huge deadly impact on the world around us Professor Alan Gillen sheds light on these and many other questions in this revealing and detailed book He shows how these constantly mutating diseases are proof for devolution rather than evolution and how all of these germs fit into a biblical world view Dr Gillen shows how germs are symptomatic of the literal Fall and Curse of creation as a result of man s sin and the hope we have in the coming of Jesus Christ
