Explorers and Exploration, 2005 Presents a comprehensive reference to explorers and topics related to exploration

The Faber Book of Exploration Benedict Allen, 2002 What is an explorer What do Scott and Amundsen Stanley and Livingstone Burton and Speke Columbus and Cortes Lewis and Clark Captain Cook and Marco Polo have in common Benedict Allen's anthology of human exploration brings vividly to life what it feels like to walk off the edge of the known world to emerge dazed dying yet triumphant from the Amazon jungle to stand on the roof of the world Through the words of those who have set off into the unknown and returned to bring this unknown back to their people the places themselves seem to speak This volume ranges across various terrain hot and cold deserts mountains and plains jungles and high seas bringing together Vikings and missionaries conquistadors and botanists to name but a few among an array of unlikely travelling companions whose description of their experiences will help us to understand and appreciate what kind of attributes make a true explorer Ian Hamilton once observed The age of adventure is far from dead so long as people like Benedict Allen tread the earth Whatever you call him traveller modern day explorer or adventurer there is no doubting Benedict Allen's voracious appetite for exploration and as such he is our ideal guide across these extraordinary pages [A History of Women in Astronomy and Space Exploration](#) Dale DeBakcsy, 2023-05-31 For the last four hundred years women have played a part far in excess of their numerical representation in the history of astronomical research and discovery It was a woman who gave us our first tool for measuring the distances between stars and another who told us for the first time what those stars were made of It was women who first noticed the rhythmic noise of a pulsar the temperature discrepancy that announced the existence of white dwarf stars and the irregularities in galactic motion that informed us that the universe we see might be only a small part of the universe that exists And yet in spite of the magnitude of their achievements for centuries women were treated as essentially second class citizens within the astronomical community contained in back rooms forbidden from communicating with their male colleagues provided with repetitive and menial tasks and paid starvation wages This book tells the tale of how in spite of all those impediments women managed by sheer determination and genius to unlock the secrets of the night sky It is the story of some of science's most hallowed names Maria Mitchell Caroline Herschel Vera Rubin Nancy Grace Roman and Jocelyn Bell Burnell and also the story of scientists whose accomplishments were great but whose names have faded through lack of use Queen Seondeok of Korea who built an observatory in the 7th century that still stands today Wang Zhenyi who brought heliocentrism to China Margaret Huggins who perfected the techniques that allowed us to photograph stellar spectra and thereby completely changed the direction of modern astronomy and Hisako Koyama whose multi decade study of the sun's surface is as impressive a feat of steadfast scientific dedication as it is a rigorous and valuable treasure trove of solar data *A History of Women in Astronomy and Space Exploration* is not only a book however of those who study space but of those who have ventured into it from the fabled Mercury 13 whose attempt to join the American

space program was ultimately foiled by betrayal from within to mythical figures like Kathryn Sullivan and Sally Ride who were not only pioneering space explorers but scientific researchers and engineers in their own rights aided in their work by scientists like Mamta Patel Nagaraja who studied the effects of space upon the human body and computer programmers like Marianne Dyson whose simulations prepared astronauts for every possible catastrophe that can occur in space Told through over 130 stories spanning four thousand years of humanity's attempt to understand its place in the cosmos *A History of Women in Astronomy and Space Exploration* brings us at last the full tale of women's evolution from instrument makers and calculators to the theorists administrators and explorers who have while receiving astonishingly little in return given us quite literally the universe
