*Unconstrained Face Recognition* Shaohua Kevin Zhou, Rama Chellappa, Wenyi Zhao, 2006-10-11 Face recognition has been actively studied over the past decade and continues to be a big research challenge Just recently researchers have begun to investigate face recognition under unconstrained conditions Unconstrained Face Recognition provides a comprehensive review of this biometric especially face recognition from video assembling a collection of novel approaches that are able to recognize human faces under various unconstrained situations The underlying basis of these approaches is that unlike conventional face recognition algorithms they exploit the inherent characteristics of the unconstrained situation and thus improve the recognition performance when compared with conventional algorithms Unconstrained Face Recognition is structured to meet the needs of a professional audience of researchers and practitioners in industry This volume is also suitable for advanced

level students in computer science      **Face Detection and Recognition** Asit Kumar Datta, Madhura Datta, Pradipta Kumar Banerjee, 2015-10-28 Face detection and recognition are the nonintrusive biometrics of choice in many security applications. Examples of their use include border control, driver's license issuance, law enforcement investigations, and physical access control. *Face Detection and Recognition: Theory and Practice* elaborates on and explains the theory and practice of face detection and recognition.      **Reliable Face Recognition Methods** Harry Wechsler, 2009-04-05 One of the challenges for computational intelligence and biometrics is to understand how people process and recognize faces and to develop automated and reliable face recognition systems. Biometrics has become the major component in the complex decision making process associated with security applications. The many challenges addressed for face detection and authentication include cluttered environments, occlusion, and disguise, temporal changes, robust training, and open set testing. *Reliable Face Recognition Methods* seeks to comprehensively address the face recognition problem while gaining new insights from complementary fields of endeavor such as neurosciences, statistics, signal and image processing, computer vision, machine learning, and data mining. This book examines the evolution of research surrounding the field to date, explores new directions, and offers specific guidance on the most promising venues for future research and development. Endorsements by Ruud Bolle (IBM), John Daugman (Cambridge University, UK), David Zhang (Hong Kong Polytechnic University, China), Stan Li (Chinese Academy of Sciences, China), Tom Huang (University of Illinois, USA).      **Recent Advances in Face Recognition** Kresimir Delac, Mislav Grgic, Sonja Grgic, 2008-12-01 The main idea and the driver of further research in the area of face recognition are security applications and human-computer interaction. Face recognition represents an intuitive and non-intrusive method of recognizing people, and this is why it became one of three identification methods used in e-passports and a biometric of choice for many other security applications. This goal of this book is to provide the reader with the most up-to-date research performed in automatic face recognition. The chapters presented use innovative approaches to deal with a wide variety of unsolved issues.      **Similarity Measures for Face Recognition** Enrico Vezzetti, Federica Marcolin, 2015-04-27 Face recognition has several applications including security such as authentication and identification of device users and criminal suspects, and in medicine, corrective surgery, and diagnosis. Facial recognition programs rely on algorithms that can compare and compute the similarity between two sets of images. This eBook explains some of the similarity measures used in facial recognition systems in a single volume. Readers will learn about various measures including Minkowski distances, Mahalanobis distances, Hausdorff distances, cosine-based distances, among other methods. The book also summarizes errors that may occur in face recognition methods. Computer scientists facing face and looking to select and test different methods of computing similarities will benefit from this book. The book is also a useful tool for students undertaking computer vision courses.      **Face Recognition Across the Imaging Spectrum** Thirimachos Bourlai, 2024-10-03 Embark on a journey through the recent groundbreaking developments in face recognition. *Kernel Learning Algorithms for Face Recognition* Jun-Bao Li, Shu-Chuan Chu, Jeng-Shyang Pan, 2013-09-07 Kernel Learning Algorithms for Face Recognition covers the framework of kernel based face recognition This book discusses the advanced kernel learning algorithms and its application on face recognition This book also focuses on the theoretical deviation the system framework and experiments involving kernel based face recognition Included within are algorithms of kernel based face recognition and also the feasibility of the kernel based face recognition method This book provides researchers in pattern recognition and machine learning area with advanced face recognition methods and its newest applications

**Face Detection and Modeling for Recognition** Rein-Lien Hsu, 2002 Face recognition has received substantial attention from researchers in biometrics computer vision pattern recognition and cognitive psychology communities because of the increased attention being devoted to security man machine communication content based image retrieval and image video coding We have proposed two automated recognition paradigms to advance face recognition technology Three major tasks involved in face recognition systems are i face detection ii face modeling and iii face matching We have developed a face detection algorithm for color images in the presence of various lighting conditions as well as complex backgrounds Our detection method first corrects the color bias by a lighting compensation technique that automatically estimates the parameters of reference white for color correction We overcame the difficulty of detecting the low luma and high luma skin tones by applying a nonlinear transformation to the Y CbCr color space Our method generates face candidates based on the spatial arrangement of detected skin patches We constructed eye mouth and face boundary

maps to verify each face candidate Experimental results demonstrate successful detection of faces with different sizes color position scale orientation 3D pose and expression in several photo collections 3D human face models augment the appearance based face recognition approaches to assist face recognition under the illumination and head pose variations For the two proposed recognition paradigms we have designed two methods for modeling human faces based on i a generic 3D face model and an individual s facial measurements of shape and texture captured in the frontal view and ii alignment of a semantic face graph derived from a generic 3D face model onto a frontal face image

Face Recognition in Adverse Conditions De Marsico, Maria, 2014-04-30 Facial recognition software has improved by leaps and bounds over the past few decades with error rates decreasing significantly within the past ten years Though this is true conditions such as poor lighting obstructions and profile only angles have continued to persist in preventing wholly accurate readings Face Recognition in Adverse Conditions examines how the field of facial recognition takes these adverse conditions into account when designing more effective applications by discussing facial recognition under real world PIE variations current applications and the future of the field of facial recognition research The work is intended for academics engineers and researchers specializing in the field of facial recognition

**When Face Recognition Goes Wrong** Catriona Havard, 2024-10-29 When Face Recognition Goes Wrong explores the myriad ways that humans and machines make mistakes in facial recognition Adopting a critical stance throughout the book explores why and how humans and machines make mistakes covering topics including racial and gender biases neuropsychological disorders and widespread algorithm problems The book features personal anecdotes alongside real world examples to showcase the often life changing consequences of facial recognition going wrong These range from problems with everyday social interactions through to eyewitness identification leading to miscarriages of justice and border control passport verification Concluding with a look to the future of facial recognition the author asks the world s leading experts what are the big questions that still need to be answered and can we train humans and machines to be super recognisers This book is a must read for anyone interested in facial recognition or in psychology criminal justice and law

*Advances in Face Detection and Facial Image Analysis* Michal Kawulok, Emre Celebi, Bogdan Smolka, 2016-04-02 This book presents the state of the art in face detection and analysis It outlines new research directions including in particular psychology based facial dynamics recognition aimed at various applications such as behavior analysis deception detection and diagnosis of various psychological disorders Topics of interest include face and facial landmark detection face recognition facial expression and emotion analysis facial dynamics analysis face classification identification and clustering and gaze direction and head pose estimation as well as applications of face analysis

Face Detection and Recognition on Mobile Devices Haowei Liu, 2014-11-25 This hands on guide gives an overview of computer vision and enables engineers to understand the implications and challenges behind mobile platform design choices Using face related algorithms as examples the author surveys and illustrates how design choices and

algorithms can be geared towards developing power saving and efficient applications on resource constrained mobile platforms Presents algorithms for face detection and recognition Explains applications of facial technologies on mobile devices Includes an overview of other computer vision technologies      Reviews, Refinements and New Ideas in Face Recognition Peter Corcoran, 2011-07-27 As a baby one of our earliest stimuli is that of human faces We rapidly learn to identify characterize and eventually distinguish those who are near and dear to us We accept face recognition later as an everyday ability We realize the complexity of the underlying problem only when we attempt to duplicate this skill in a computer vision system This book is arranged around a number of clustered themes covering different aspects of face recognition The first section on Statistical Face Models and Classifiers presents reviews and refinements of some well known statistical models The next section presents two articles exploring the use of Infrared imaging techniques and is followed by few articles devoted to refinements of classical methods New approaches to improve the robustness of face analysis techniques are followed by two articles dealing with real time challenges in video sequences A final article explores human perceptual issues of face recognition      **Face Detection and Gesture Recognition for Human-Computer Interaction** Ming-Hsuan Yang, Narendra Ahuja, 2012-12-06 Traditionally scientific fields have defined boundaries and scientists work on research problems within those boundaries However from time to time those boundaries get shifted or blurred to evolve new fields For instance the original goal of computer vision was to understand a single image of a scene by identifying objects their structure and spatial arrangements This has been referred to as image understanding Recently computer vision has gradually been making the transition away from understanding single images to analyzing image sequences or video understanding Video understanding deals with understanding of video sequences e g recognition of gestures activities facial expressions etc The main shift in the classic paradigm has been from the recognition of static objects in the scene to motion based recognition of actions and events Video understanding has overlapping research problems with other fields therefore blurring the fixed boundaries Computer graphics image processing and video databases have obvious overlap with computer vision The main goal of computer graphics is to generate and animate realistic looking images and videos Researchers in computer graphics are increasingly employing techniques from computer vision to generate the synthetic imagery A good example of this is image based rendering and modeling techniques in which geometry appearance and lighting is derived from real images using computer vision techniques Here the shift is from synthesis to analysis followed by synthesis      Face Recognition Miloš Oraveć, 2010-04-01 This book aims to bring together selected recent advances applications and original results in the area of biometric face recognition They can be useful for researchers engineers graduate and postgraduate students experts in this area and hopefully also for people interested generally in computer science security machine learning and artificial intelligence Various methods approaches and algorithms for recognition of human faces are used by authors of the chapters of this book e g PCA LDA artificial neural networks wavelets curvelets kernel methods Gabor filters

Pattern recognition has gained significant attention due to the rapid explosion of internet and mobile based applications Among the various pattern recognition applications face recognition is always being the center of attraction With so much of unlabeled face images being captured and made available on internet particularly on social media conventional supervised means of classifying face images become challenging This clearly warrants for semi supervised classification and subspace projection Another important concern in face recognition system is the proper and stringent evaluation of its capability This book is edited keeping all these factors in mind This book is composed of five chapters covering introduction overview semi supervised classification subspace projection and evaluation techniques      **Face Recognition** Sam S. Rakover, Baruch Cahlon, 2001 Annotation In 1997 Rakover U of Haifa and Cahlon Oakland U Michigan won an award from the Minister of Internal Security of the State of Israel for developing the Catch model for face recognition Since then they have proposed the law of Face Recognition by Similarity Here they describe the computer and mathematical research they have conducted and some of their results Annotation c Book News Inc Portland OR booknews com      American Photography , 1928
