Designing Better Engineering Education Through Assessment Joni Spurlin, Sarah A. Rajala, Jerome P. Lavelle, 2023-07-03 This book is written for engineering faculty and department chairs as a practical guide to improving the assessment processes for undergraduate and graduate engineering education in the service of improved student learning It is written by engineering faculty and assessment professionals who

have many years of experience in assessment of engineering education and of working with engineering faculty. The book reflects the emphasis placed on student outcomes assessment by ABET Inc, the organization that accredits most U S engineering, computer science and technology programs as well as providing substantial equivalency evaluations to international engineering programs. The book begins with a brief overview of assessment theory and introduces readers to key assessment resources. It illustrates through practical examples that reflect a wide range of engineering disciplines and practices at both large and small institutions and along the continuum of students' experience from first year to capstone engineering courses through to the dissertation how to go about applying formative and summative assessment practices to improve student learning at the course and program levels. For most institutions, assessment of graduate education is new; therefore, there are readers who will be particularly interested in the chapters and examples related to graduate education. This book concludes with a vision for the future of assessment for engineering education. The authors cover five basic themes:

- Use of assessment to improve student learning and educational programs at both undergraduate and graduate levels
- Understanding and applying ABET criteria to accomplish differing program and institutional missions
- Illustration of evaluation/assessment activities that can assist faculty in improving undergraduate and graduate courses and programs
- Description of tools and methods that have been demonstrated to improve the quality of degree programs and maintain accreditation
- Identification of methods for overcoming institutional barriers and challenges to implementing assessment initiatives

Practical Guide To Medical Student Assessment Zubair Amin, Yap Seng Chong, Hoon Eng Khoo, 2006-08-23. This practical guide provides a simple, useful reference to commonly raised questions about medical student assessment. The first part of the book provides succinct information on the general aspects of assessment such as purpose and principles of assessment, technical terms such as validity, reliability and utility of assessment instruments, and how to choose assessment instruments for a given purpose. Individual assessment instruments are treated in the second part of the guide. The authors focus on about 20 selected assessment instruments currently in use or promising new instruments that are likely to get increased acceptance in future. For each instrument, a general description is given followed by discussion on its uses, limitations, psychometric characteristics and recommendations for medical teachers. The reference section contains highly selective and well-researched resources, annotated and classified according to their usefulness. Many of these resources are available free on the Internet.

Multicultural Assessment Richard H. Dana, 2005-03-23. Psychologists throughout the world are being asked to assess an increasingly diverse clientele: immigrants, refugees, second and third generations still influenced by different cultures and languages, and indigenous peoples now moving towards the mainstream. Most are ill-equipped by training and experience to understand, assess and subsequently treat such clients competently and ethically. Virtually all agree on the need for culture-sensitive assessment, but it has proven difficult to provide adequate services despite good intentions and funding. Too often, clients who may have different worldviews and health/illness beliefs are marginalized. For

many reasons standard assessment instruments designed researched and normed on a few groups in the United States the MMPI 2 the Rorschach and the TAT are used as though they were universally applicable Most busy practitioners have little time to investigate alternatives developed for use with one new group or another focused on one issue or another generally in a research context In this book Richard Dana proposes a new model of multicultural assessment practice and points directions for future training and research He presents general culture specific and step by step instrument specific guidelines for the use of the standard armamentarium with different groups Throughout he highlights exciting new interpretive possibilities the traditional tests offer that should be regularly exploited but emphasizes the importance of recognizing psychometric limits Four extended examples of the use of one or several instruments with a specific group offer concrete illustrations of the model in action Multicultural Assessment Principles Applications and Examples constitutes an invaluable new resource for psychologists and for their students and trainees
