**Grammatical and Syntactical Approaches in Architecture: Emerging Research and Opportunities** Lee, Ju Hyun, Ostwald, Michael J., 2019-12-20 Shape grammar and space syntax have been separately developed but rarely combined in any significant way The first of these is typically used to investigate or generate the formal or geometric properties of architecture while the second is used to analyze the spatial topological or social properties of architecture Despite the reciprocal relationship between form and space in architecture it is difficult to conceptualize a completed building without a sense of both of these properties the two major computational theories have been largely developed and applied in isolation from each another *Grammatical and Syntactical Approaches in Architecture: Emerging Research and Opportunities* is a critical scholarly resource that explores the relationship between shape grammar and space syntax for urban planning and architecture and enables the creative discovery of both the formal and spatial features of an architectural style or type This book furthermore presents a new method to selectively capture aspects of both the grammar and syntax of architecture Featuring a range of topics such as mathematical analysis spatial configuration and domestic architecture this book is essential for architects policymakers urban planners researchers academicians and students

**The Architecture of the Language Faculty** Ray Jackendoff, 1997 Ray Jackendoff steps back to survey the broader theoretical landscape in linguistics in an attempt to identify some of the sources of the widely perceived malaise with respect to much current theorizing Over the past twenty five years Ray Jackendoff has investigated many complex issues in syntax semantics and the relation of language to other cognitive domains He steps back in this new book to survey the broader theoretical landscape in linguistics in an attempt to identify some of the sources of the widely perceived malaise with respect to much current theorizing Starting from the Minimalist necessity for interfaces of the grammar with sound meaning and the lexicon Jackendoff examines many standard assumptions of generative grammar that in retrospect may be seen as the product of historical accident He then develops alternatives more congenial to contemporary understanding of linguistic phenomena *The Architecture of the Language Faculty* seeks to situate the language capacity in a more general theory of mental representations and to connect the theory of grammar with processing To this end Jackendoff works out an architecture that generates multiple co constraining structures and he embeds this proposal in a version of the modularity hypothesis called Representational Modularity Jackendoff carefully articulates the nature of lexical insertion and the content of lexical entries including idioms and productive affixes The resulting organization of the grammar is compatible with many different technical realizations which he shows can be instantiated in terms of a variety of current theoretical frameworks *Linguistic Inquiry Monograph No*

28     *The Ethical Function of Architecture* Karsten Harries, 1998-07-31 Can architecture help us find our place and way in today's complex world Can it return individuals to a whole to a world to a community Developing Giedion's claim that contemporary architecture's main task is to interpret a way of life valid for our time philosopher Karsten Harries answers that architecture should serve a common ethos But if architecture is to meet that task it first has to free itself from the dominant formalist approach and get beyond the notion that its purpose is to produce endless variations of the decorated shed In a series of cogent and balanced arguments Harries questions the premises on which architects and theorists have long relied premises which have contributed to architecture's current identity crisis and marginalization He first criticizes the aesthetic approach focusing on the problems of decoration and ornament He then turns to the language of architecture If the main task of architecture is indeed interpretation in just what sense can it be said to speak and what should it be speaking about Expanding upon suggestions made by Martin Heidegger Harries also considers the relationship of building to the idea and meaning of dwelling Architecture Harries observes has a responsibility to community but its ethical function is inevitably also political He concludes by examining these seemingly paradoxical functions     **A New Architecture for Functional Grammar** J. Lachlan Mackenzie, María de los Ángeles Gómez González, 2004 This volume which represents a major advance on Simon Dik's final statement of the theory 1997 lays the foundation for the future evolution of FG towards a Functional Discourse Grammar It rises to the double challenge of specifying the interface between discourse and grammar and of detailing the expression rules that link semantic representation and morphosyntactic form The opening chapter by Kees Hengeveld sets out in programmatic form a new architecture for FG which both preserves the best of the traditional model and offers a place for numerous recent insights The remaining chapters are devoted to refining and developing the programme laid down by Hengeveld bringing in data from a range of languages as well as theoretical insights inspired by adjoining frameworks Of special interest are an account by Matthew Anstey of how current proposals arise from the history of FG and various chapters in which the model is brought much closer to an account of real time language production notably including the first ever detailed account of the workings of expression rules by Dik Bakker and Anna Siewierska The final chapter also by Hengeveld draws together the findings of the various chapters culminating in an elaborated model that represents the most sophisticated statement of Functional Grammar currently available The volume thus gives a coherent account of FG as a theory which combines formal explicitness with a broad account of language functions     *The Architecture of Focus* Valéria Molnár, Susanne Winkler, 2006 The architecture of the human language faculty has been one of the main foci of the linguistic research of the last half century This branch of linguistics broadly known as Generative Grammar is concerned with the formulation of explanatory formal accounts of linguistic phenomena with the ulterior goal of gaining insight into the properties of the language organ The series comprises high quality monographs and collected volumes that address such issues The topics in this series range from phonology to semantics from syntax to information

structure from mathematical linguistics to studies of the lexicon

### **Mathematical Thinking and Properties in**

**Architecture** Ju Hyun Lee, Michael J. Dawes, Michael J. Ostwald, 2025-06-30 This monograph explores the profound connections between architecture and mathematics through the works of Andrea Palladio, Le Corbusier and Peter Eisenman. Combining historical insights with computational analyses, it examines the social, spatial and aesthetic properties of twenty-six iconic designs. Advanced methods such as Space Syntax, isovists, fractal analysis, image segmentation and semantic linguistic analysis reveal the mathematical principles underlying architectural thinking and properties. Richly illustrated with over 100 visuals, this volume is an essential resource for senior undergraduates, postgraduates, practicing architects and historians seeking a deeper understanding of mathematical thinking in architectural design and analysis. Style and Composition in Architecture - An Exposition of the Canon of Number, Punctuation and Inflection A. Tristan

Edwards, 2016-09-06 Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high-quality modern editions using the original text and artwork. *The Classical Language of Architecture* John Summeron, 1966-12-15 The author's purpose is to set out as simply and vividly as possible the exact grammatical workings of an architectural language. Classical architecture is a visual language and like any other language has its own grammatical rules. Classical buildings as widely spaced in time as a Roman temple, an Italian Renaissance palace and a Regency house all show an awareness of these rules, even if they vary them, break them or poetically contradict them. Sir Christopher Wren described them as the Latin of architecture and the analogy is almost exact. There is the difference, however, that whereas the learning of Latin is a slow and difficult business, the language of classical architecture is relatively simple. It is still to a great extent the mode of expression of our urban surroundings, since classical architecture was the common language of the western world till comparatively recent times. Anybody to whom architecture makes a strong appeal has probably already discovered something of its grammar for himself. In this book the author's purpose is to set out as simply and vividly as possible the exact grammatical workings of this architectural language. He is less concerned with its development in Greece and Rome than with its expansion and use in the centuries since the Renaissance. He explains the vigorous discipline of the orders and the scope of rustication, the dramatic deviations of the Baroque and in the last chapter the relationship between the classical tradition and the modern architecture of today. The book is intended for anybody who cares for architecture but more specifically for students beginning a course in the history of architecture to whom a guide to the classical rules will be an essential companion. **Syntactic architecture and its consequences II** András Bárány, Theresa Biberauer, Jamie Douglas, Sten Vikner, 2020-12-30 This volume collects novel contributions to comparative generative linguistics that rethink existing approaches to an extensive range of phenomena domains and architectural questions in linguistic theory. At the heart of the contributions is the tension between descriptive and explanatory adequacy which has long animated generative linguistics.

and which continues to grow thanks to the increasing amount and diversity of data available to us The chapters address research questions in comparative morphosyntax including the modelling of syntactic categories relative clauses and demonstrative systems Many of these contributions show the influence of research by Ian Roberts and collaborators and give the reader a sense of the lively nature of current discussion of topics in morphosyntax and morphosyntactic variation **The**
