

Cardiac Emergency

Check patient

Signs of SCA

- ▶ Unconscious
- ▶ Not breathing
- ▶ No circulation (no pulse)

If victim is unresponsive, activate the chain of survival; a series of steps and procedures, which together could save the life of a sudden cardiac arrest (SCA) victim.

1

Call for help

Stay with the victim; send someone to CALL 911 and return with the AED.

2

Start CPR

Begin CPR immediately to circulate oxygenated blood to the brain and body. As soon as the AED arrives, use it.

3

Early Defibrillation

1. Turn on AED
2. Follow audible instructions
3. Press the shock button, if advised.

4

Advanced Care

Have someone direct the paramedics to the scene and update them on the status of the victim.

Act Fast!

SCA is the leading cause of death in the United States. Every minute that passes without CPR, the chance of survival drops by 10%. If you act fast, you can save a life.

Importance of CPR

Without CPR, the brain and heart will stop working. CPR keeps the blood flowing to the brain and heart, giving the body a better chance to respond to defibrillation therapy.

AEDs Are Safe

AEDs are safe and easy to use. They will only shock if it is needed. They are simple to operate, and they will not shock if the person is not in cardiac arrest. AEDs are designed to be used by anyone, even someone who has never used one before.

Notice where AEDs are located.

A sudden cardiac arrest (SCA) is a life-threatening condition that can occur without warning. Knowing how to respond quickly can increase the victim's chance of survival.

Emergency Cardiology: a Practical Guide Loukianos Rallidis, 2017-08-15 This book represents an attempt to simplify the way of handling emergency cardiology cases At the end of each chapter there is an algorithm that focuses on the basic diagnostic points and the main therapeutic actions for handling the illness The composition of the text is based for the most part on the existing guidelines of scientific associations However in many of the cases the author uses only the most essential information that assists in the management of emergency cases incorporating certain elements from his own personal experiences The algorithms offer

only a rough guide to patient management and may need modifications according to the peculiarities of the case and the handling doctor's judgement. The text that precedes the algorithm provides the necessary theoretical substrate to allow the reader to assimilate the algorithmic evaluation of the emergency illness. In order to facilitate the doctor's therapeutic management of the case and the way of preparing and administering intravenous solutions are described while representative brand names of the main cardiological drugs are included.
