American Breeders Magazine ,1916 Venus Aeronomy C.T. Russell,2012-12-06 For almost three decades since Mariner 2 flew by the planet in December 1962 Venus has been the subject of intense investigation by both the Soviet and American space programs Since the intrinsic magnetic field of Venus is exceedingly weak if it exists at all we expect many phenomena of the upper atmosphere and ionosphere of Venus to differ from their terrestrial counterparts While flybys and landings of the many Venus missions provided useful data on these phenomena orbital missions were needed for their detailed investigation Such orbital missions were provided by the Soviet program with Veneras 9 and 10 in October 1975 and by the United States with the Pioneer Venus Orbiter in December 1978 Originally designed for a prime mission of only 243 days the Pioneer Venus Orbiter is still functioning over a decade later providing data nearly hours a day through one of the most active solar cycles to date We expect these transmissions to continue until September 1992 when gravitation perturbations will lower the periapsis of the PVO orbit so that the spacecraft will be lost to the atmosphere The Venera 9 and 10 and the Pioneer Venus observations have led to an explosion of knowledge about the upper atmosphere and ionosphere of Venus and their interaction with the solar wind The availability of data over a full solar cycle has

Comparative Aeronomy Andrew F. Nagy, A. Balogh, Thomas E. Cravens, Michael Mendillo, Ingo Müller-Wodarg, 2008-12-31 Andrew F Nagy Originally published in the journal Space Science Reviews Volume 139 Nos 1-4 DOI 10.1007/s11214-008-9353-0 Springer Science Business Media B.V. 2008 Keywords Aeronomy The term aeronomy has been used widely for many decades but its origin has mostly been lost over the years It was introduced by Sydney Chapman in a Letter to the Editor entitled Some Thoughts on Nomenclature in Nature in 1946 Chapman 1946 In that letter he suggested that aeronomy should replace meteorology writing that the word meteor is now irrelevant and misleading This proposal was apparently not received with much support so in a short note in Weather in 1953 Chapman 1953 wrote If despite its obvious convenience of brevity in itself and its derivatives it does not commend itself to aeronomers I think there is a case for modifying my proposal so that instead of the word being used to signify the study of the atmosphere in general it should be adopted with the restricted sense of the science of the upper atmosphere for which there is no convenient short word In a chapter he wrote in a 1960 book Chapman 1960 he gave his name and definition by stating that Aeronomy is the science of the upper region of the atmosphere where dissociation and ionization are important The Workshop on Comparative Aeronomy was held at ISSI during the week of June 25-29 2007
