Lipid Absorption: Biochemical and Clinical Aspects K. Rommel, H. Goebell, R. Bohmer, 2012-12-06

In May 1975 more than 50 scientists research workers and clinician from 12 countries spent three days at Titisee in the Black Forest discussing problems relating to lipid absorption and ways of promoting closer liaison in the field In this book all the papers presented at this symposium are published in full together with the ensuing discussions We should all like to thank Dr Falk for his generous sponsorship of this meeting which enabled us to work in such a charming atmosphere We should also like to thank the authors and the other participants for the rapid preparation and correction of their manuscripts and the publishers for their cooperation and assistance in preparing this book We believe it represents a wide ranging survey of existing knowledge of lipid absorption which will we trust provide a real stimulus for further research and new

ideas in the study of this subject *Immunochemistry of Proteins* M. Zouhair Atassi,2012-12-06 The structural features responsible for the immunogenicity of certain parts of native protein molecules have been of interest to immunochemists and protein chemists for over three decades Following the early work of Land steiner in 1942 which showed that peptide fragments from silk fibroin exhibited an inhibitory activity toward the reaction of the protein with its antibodies fragments from many other protein systems have been isolated and studied However no concerted effort was or could be devoted to the elucidation of the complete antigenic structure of a protein In order for these endeavors to be successful and meaningful knowledge of both the amino acid sequence and the detailed three dimensional structure of the protein is necessary Such information was not available for a protein until early in the 1960s This and the fact that protein chemistry was not in fact sufficiently developed early in the 1960s to enable the successful completion of the entire antigenic structure of a protein were major contributing factors for the slow progress in this field Determination of the antigenic structures of proteins therefore posed a chemical challenge of enormous proportions For these reasons many investigators diverted their attention to study of the immunochemistry of homo or mixed amino acid polymers in the hope that the information derived from these systems might prove useful in the understanding of the immunochemistry of proteins *The Yale Journal of Biology and Medicine* ,1966 **Biomolecules** Shikha Kaushik,Anju Singh,2023-03-20 Biochemistry is the study of the structure and functions of biological macromolecules such as nucleic acids proteins carbohydrates and lipids The book is organized in five chapters which covers the basic concepts and fascinating chemistry of biomolecules It also exposes students to different metabolic pathways and concept of energy in biological system and provides valuable material for the students of Chemistry Biochemistry Biotechnology and Bioscience **Science and Civilisation in China: Volume 2, History of Scientific Thought** Joseph Needham,Ling Wang,1956-01-03 The second volume of Dr Joseph Needham s great work Science and Civilisation in China is devoted to the history of scientific thought Beginning with ancient times it describes the Confucian milieu in which arose the organic naturalism of the great Taoist school the scientific philosophy of the Mohists and Logicians and the quantitative materialism of the Legalists Thus we are brought on to the fundamental ideas which dominated scientific thinking in the Chinese middle ages The author opens his discussion by considering the remote and pictographic origins of words fundamental in scientific discourse and then sets forth the influential doctrines of the Two Forces and the Five Elements Subsequently he writes of the important sceptical tradition the effects of Buddhist thought and the Neo Confucian climax of Chinese naturalism Last comes a discussion of the conception of Laws of Nature in China and the West Guide to Festschriften New York Public Library. Research Libraries,Library of Congress,1977 *New Scientist* ,1969 Botanical Abstracts Board of Control of Botanical Abstracts,1921 The Antigens Michael Sela,2014-05-10 The Antigens Volume IV is a comprehensive treatise covering all aspects of antigens including their chemistry and biology as well as their immunologic role and expression Topics covered range from the immune reactions of lipids and lipid model membranes to the immunology

of antibiotics and protective antigens of bacteria Antigens of pathogenic fungi are also explored along with adjuvants and antigenic competition Comprised of seven chapters this volume begins with a review of lipids as antigens followed by a discussion on the immunological aspects of antibiotics The next two chapters are concerned with more complex antigens namely bacteria and fungi as well as the relationship between immunity and infection The last three chapters deal with three important areas of immunology antigenic competition adjuvants and lectins In particular the chemistry of lectins and their application to immunology are examined This monograph will be of interest to practitioners and researchers in immunology experimental and clinical medicine biochemistry and other disciplines
