## **Extinction A Scientific American:**

**De-Extinction** Rebecca E. Hirsch, 2017-01-01 In the twenty first century because of climate change and other human activities many animal species have become extinct and many others are at risk of extinction Once they are gone we cannot bring them back or can we With techniques such as cloning scientists want to reverse extinction and return lost species to the wild Some scientists want to create clones of recently extinct animals while others want to make new hybrid animals Many people are opposed to de extinction Some critics say that the work diverts attention from efforts to save species that are endangered Others say that de extinction amounts to scientists playing God Explore the pros and cons of de extinction and the cutting edge science that makes it possible

**Extinction** Ashley Dawson, 2016-08-01 Some thousands of years ago the world was home to an immense variety of large mammals From woolly mammoths and saber toothed tigers to giant ground sloths and armadillos the size of automobiles these spectacular creatures roamed freely Then human beings arrived Devouring their way down the food chain as they spread across the planet they began a process of voracious extinction that has continued to the present Headlines today are made by the existential threat confronting remaining large animals such as rhinos and pandas But the devastation summoned by humans extends to humbler realms of creatures including beetles bats and butterflies Researchers generally agree that the current extinction rate is nothing short of catastrophic Currently the earth is losing about a hundred species every day This relentless extinction Ashley Dawson contends in a primer that combines vast scope with elegant precision is the product of a global attack on the commons the great trove of air water plants and creatures as well as collectively created cultural forms such as language that have been regarded traditionally as the inheritance of humanity as a whole This attack has its genesis in the need for capital to expand relentlessly into all spheres of life Extinction Dawson argues cannot be understood in isolation from a critique of our economic system To achieve this we need to transgress the boundaries between science environmentalism and radical politics Extinction A Radical History performs this task with both brio and brilliance

**Last of the Giants** Jeff Campbell, 2019-08-01 Today an ancient world is vanishing right before our eyes the age of giant animals Over 40 000 years ago the earth was ruled by megafauna mammoths mastodons saber toothed tigers and giant sloths Of course those creatures no longer exist and there is only one likely reason for that the evolution and arrival of the earth s only tool wielding hunter the wildly adaptive comparatively pint sized human species Many more of the world s biggest and baddest creatures including the black rhino the dodo giant tortoises and the great auk have vanished since our world became truly global Last of the Giants chronicles those giant animals and apex predators pushed to extinction in the modern era The book also highlights those giant species that remain even though many barely survive living in such low numbers that they are on the brink of leaving this world within the next few decades However there is hope for many endangered species can still be saved As it profiles each extinct and endangered animal Last of the Giants focuses on the conservation efforts that are trying to preserve the world s remaining

Recovering Lost Species in the Modern Age Dolly Jorgensen, 2019-10-29 A groundbreaking study of how emotions motivate attempts to counter species loss This groundbreaking book brings together environmental history and the history of emotions to examine the motivations behind species conservation actions In Recovering Lost Species in the Modern Age Dolly Jorgensen uses the environmental histories of reintroduction rewilding and resurrection to view the modern conservation paradigm of the recovery of nature as an emotionally charged practice Jorgensen argues that the recovery of nature identifying that something is lost and then going out to find it and bring it back is a nostalgic practice that looks to a historical past and relies on the concept of belonging to justify future oriented action The recovery impulse depends on emotional responses to what is lost particularly a longing for recovery that manifests itself in such emotions as guilt hope fear and grief Jorgensen explains why emotional frameworks matter deeply both for how people understand nature theoretically and how they interact with it physically The identification of what belongs the lost nature and our longing the emotional attachment to it in the present will affect how environmental restoration practices are carried out in the future A sustainable future will depend on questioning how and why belonging and longing factor into the choices we make about what to recover
