Eye on the Sky Donald E. Osterbrock, John R. Gustafson, W.J. Shiloh Unruh, 2010-04-12 The world's first mountain top observatory and America's first big science research center Lick Observatory exemplifies astronomy's dramatic development in the past century A dedicated Confederate naval officer and his jack of all trades foreman used the bequest of a miserly

California eccentric to transform an isolated mountain peak into the world's premier research observatory. Its first staff included a director from West Point and three of the outstanding astronomers of their time. Since its dedication in 1888, Lick Observatory has been the site of many of the most important discoveries in astronomy. *Eye on the Sky* presents Lick Observatory from the point of view of the people who breathed life into its giant telescopes. Their community was both constant and constantly transformed, shaped by workers famous and unknown who made it their home. The authors also explain in terms anyone can understand the laboratory advances that were adapted to telescopes to make them more powerful and the conceptual breakthroughs that discoveries at the telescope helped bring about. The men and women who went to the top of Mount Hamilton in search of greater knowledge of the skies helped to change our conception of the universe and our place in it. They were people with personal and political lives as well as scientific careers, and their story illuminates a time and a place where foundations were laid for the discoveries of the next century.

Drones and the Annihilation-Image in Contemporary Warfare Gabriel F. Caetano, 2024-10-26 This book analyses the entanglement between Washington and Hollywood to shed light on the violence inherent in the image as a semiotic material agent in contemporary warfare In the 21st century the weaponized military drone an image centered machine has spearheaded the geopolitical curatorship of the USA in the context of the war on terror Drone violence shares the same characteristics as cinema image and movement However a drone s image is not purely a reflection of the nature of war it is more than representational it is performative Building upon the concept of annihilation image this book argues that the image wields a destructive agency as it transitions from reflection to diffraction Rather than mirroring reality the annihilation image creates a brutal pattern of difference in the world It is a destructive ontology in which seeing and annihilating are in a state of superposition Therefore everything that is framed is potentially dead That is to say by framing bodies and objects in the terrain a state of superpositional violence is created in which one is alive but virtually dead
