The Development of Hearing S.R. Yeates, 2012-12-06

The frontispiece of this book is called *The invisible handicap*. Most deaf children, with the exception of very unfortunate multiple handicap children, look quite normal. The young babies who are sent to my clinics for confirmation or otherwise of a hearing loss are very often handsome, delightful infants with no other problems. The deaf child only reveals his handicap when communication is attempted. At that point, the picture changes. To an ill-informed observer, this child who had previously seemed quite normal and who had been seen to be playing normally suddenly appears stupid. That unhappily is too often the attitude of the general public towards the deaf person. There is far too often a total misunderstanding of the problems of both the deaf child and the deaf adult. It must also be admitted that far too often the speech of the deaf is very ugly, and when this is added to their difficulties in verbal comprehension, we begin to understand why the attitude of the public at large is ill-judged, intolerant, and occasionally even hostile. We must therefore aim for three goals. The first must be the ever-increasing education of hearing people about the problems of the deaf, with maximum attempts to involve them with the activities of the deaf community which has evolved for self-protection and mutual help.
