Burnett,2012-01-09 This wonderful book documents the interplays among science conservation and politics in the evolving career of the whale over the last century William Perrin Senior Scientist for Marine Mammals at the Southwest Fisheries Science Center NOAA Fisheries Service From biblical times whales have breached in the human imagination as looming figures of terror power confusion and mystery In the twentieth century however our understanding of and relationship to these superlatives of creation underwent some astonishing changes and with The Sounding of the Whale D Graham Burnett tells the fascinating story of the transformation of cetaceans from grotesque monsters useful only as wallowing kegs of fat and fertilizer to playful friends of humanity bellwethers of environmental devastation and finally totems of the counterculture in the Age of Aquarius When Burnett opens his story ignorance reigns even Nature was misclassifying whales at the turn of the century and the only biological study of the species was happening in gruesome Arctic slaughterhouses But in the aftermath of World War I an international effort to bring rational regulations to the whaling industry led to an explosion of global research and regulations that while well meaning were quashed or widely flouted by whaling nations the first shot in a battle that continues to this day The book closes with a look at the remarkable shift in public attitudes toward whales that began in the 1960s as environmental concerns and new discoveries about whale behavior combined to make whales an object of sentimental concern and public adulation A sweeping history grounded in nearly a decade of research The Sounding of the Whale tells a remarkable story of how science politics and simple human wonder intertwined to transform the way we see these behemoths from below Marine Conservation G. Carleton Ray, Jerry McCormick-Ray,2013-10-11 Providing a guide

for marine conservation practice Marine Conservation takes a whole systems approach covering major advances in marine ecosystem understanding Its premise is that conservation must be informed by the natural histories of organisms together with the hierarchy of scale related linkages and ecosystem processes The authors introduce a broad range of overlapping issues and the conservation mechanisms that have been devised to achieve marine conservation goals The book provides students and conservation practitioners with a framework for thoughtful critical thinking in order to incite innovation in the 21st century Marine Conservation presents a scholarly but eminently readable case for the necessity of a systems approach to conserving the oceans combining superb introductions to the science law and policy frameworks with carefully chosen case studies This superb volume is a must for anyone interested in marine conservation from students and practitioners to lay readers and policy makers Simon Levin George M Moffett Professor of Biology Department of Ecology Evolutionary Biology Princeton University **Children and Pollution** Colleen F. Moore,2009-04-08 How does pollution impact our daily quality of life What are the effects of pollution on children s development Why do industry and environmental experts disagree about what levels of pollutants are safe In this clearly written book Moore traces the debates around five key

discussed The book is illustrated with a large number of high quality micro photos **Federal Register** ,2013-06

Sensory Abilities of Cetaceans Jeanette A. Thomas,Ronald A. Kastelein,2013-11-11 This book evolved through the efforts of several organizations and the dedication of many individuals In 1987 we received a request to propose a workshop topic for the Fifth International Theriological Congress ITC to be held in August 1989 in Rome Italy After looking up the meaning of the word theriological in the dictionary and discovering that it pertains to mammalian behavior we decided a symposium on sensory abilities of whales and dolphins would be an interesting topic The ITC convenes only every five years and has the distinction of being very well attended by scientists from around the world We thought that hosting a workshop in conjunction with the ITC would attract a variety of international scientists that rarely have the opportunity to interact Fortunately for all involved our prediction was correct The first two days of the workshop 23 24 August 1989 were held in conjunction with ITC and the nearly 1 000 attending scientists were able to view our posters and listen to lectures The third day was limited to only about 65 invited scientists who were divided into topical working groups chaired by a rapporteur

Behavior of Marine Animals Howard E. Winn,Bori L. Olla,2012-12-06 Four years ago we began soliciting articles for this volume from authors who were engaged in comprehensive research on whales From the outset we decided not to limit the subject matter to behavior but to also include natural history Much of what is known about the behavior of whales arose from studies whose principal aim was not behavior much as it did for other animal groups before behavior was considered a distinct discipline Thus in many of the articles behavior is closely intertwined with natural history and in others is completely overshadowed by a basic natural history approach Our aim was to have the articles contain a review of the literature and include research findings not previously published For all intents and purposes this aim has been realized albeit perhaps not in as balanced a fashion in terms of species or subject matter as was originally planned Nevertheless we believe the articles present a wide range of informative works with a myriad of approaches and techniques represented We are grateful to the contributors for their patience and understanding in awaiting publication which has taken much longer than we originally expected We are also grateful for the assistance of a number of people especially Julie Fischer and Lois Winn for their editorial efforts and Jill Grover Carol Samet and Lois Winn for their help in indexing **Ultrasonic Communication by**

Animals G. Sales,2012-12-06 In recent years there has been a rapid increase in the understanding of communication between animals and this is perhaps especially true of bio acoustics In the last 35 years a completely new branch of bio acoustics involving ultrasounds has been made possible by technical developments that now allow these inaudible sounds to be detected and studied This subject has a personal fascination for the authors perhaps because of the novelty of listening in to these previously unknown signals perhaps because of the wide variety of ways in which different animals use them Many studies of different aspects of animal ultrasound have now been published and a review of them all seems to be timely Ultrasound is biologically arbitrary other animals defined in human terms and may produce similar signals at lower

frequencies for similar purposes This book attempts to be comprehensive but the limits of the subject are rather difficult to define It should be read in conjunction with other books on audible bio acoustics Each chapter has been written and may be read as a separate entity although there is considerable cross referencing Chapters 1 and 2 form a common introduction and may help in understanding the later sections The Appendix is not essential but is included for those who may be interested in the quantitative aspects of the echo location phenomena described in Chapters 3 and 8 *Sensory Ecology* M.

Ali,2013-03-09 Never so pleased sir Twas an excellent dance And for a preface I never heard a better Two Noble Kinsmen Act III Sc S This volume is based mostly on the lectures delivered at an Advanced Study Institute ASI of the same title held in July 1977 One lecture given is not in the volume and three chapters although not based on lectures delivered have been added to better balance the book A chapter on the ecosensory functions in crustaceans could not be put in due to time contingency This absence is deeply regretted The idea to hold an ASI on Sensory Ecology evolved slowly mainly due to my own research interest in the past and partly to the discussions I had with a number of colleagues particularly Dr John Lythgoe of the University of Sussex The purpose was to interface Sensory Physiology with Ecology so that workers in those fields will develop a greater awareness for each other Sense organs have of course evolved to keep their possessors ware of the environment and changes in it Thus normally one could expect that a study of their functions will be undertaken in relation to environmental parameters Acoustical Holography A. Metherell,2012-12-06 Only a space limitation of 115 seats prevented this First International Symposium on Acoustical Holography from having an attendance of over 250 Unfortunately the size of the auditorium of the Douglas Advanced Research Laboratories required that attendance be by invitation only and many deserving and interested scientists could not be present This volume presents the proceedings of the symposium and hopefully will help compensate those individuals who were unable to attend The symposium itself consisted of sixteen formal papers The seventeenth by Dr P Greguss was not received in time to be read but is included in these proceedings The presence of Professor Dennis Gabor considerably enhanced the informal sessions which frequently became as spirited as one might expect in a new field Dr H M A El Sum a consultant to the Douglas Advanced Research Laboratories and a pioneer in the field of holography set the stage with the first paper He provided a general introduction to the physical principles and practical methods involved in optical and acoustical holography His paper also included a summary of various specific techniques currently used in sound holography with the advantages disadvantages and limitations involved for each approach

The Emergence of Whales J.G.M. Thewissen,2013-11-11 Research in whale origins is now in an explosive phase with a cascade of discoveries adding to our understanding of the evolutionary pattern and a suite of new techniques being applied to address new questions The objective of this volume is to provide a snapshot of this explosion The volume paints the scene with a broad brush Taken together the chapters clearly indicate that cetacean origins is a field that is dynamic multidisciplinary and that the end of the explosive phase is not in sight
