Heart In Systemic Autoimmune Diseases:

The Heart in Systemic Autoimmune Diseases Andrea Dorea, 2004-01-20 This first volume represents the state of the art in the field of cardiovascular disease and autoimmune rheumatic diseases Systemic autoimmune diseases comprise a family of conditions that share common pathogenetic mechanisms as well as a multi organ involvement including the heart This volume has been subdivided into three parts In the first part the immune mechanisms involved in cardiac damage have been considered The role of proinflammatory and regulatory cytokines in driving an autoimmune response to cardiac self tissues has been analysed Moreover the prevalence the clinical meaning and the hypothetical pathogenicity of a broad spectrum of organ and non organ specific autoantibodies have been discussed in detail In the second part of the volume the role of humoral and innate immunity in promoting the development of atherosclerotic plaque has been extensively reviewed along with the newly discovered anti inflammatory properties of statins These two parts of the volume deal with exciting aspects of this topic suggesting a very close connection between heart diseases and immunology Finally in the third part the cardiac manifestations observed in the major systemic autoimmune conditions have been comprehensively examined This book yields an impressive body of well ordered information highlighting key references and summarising the experience of a selected panel of distinguished physician scientists actively involved in the field of cardiovascular disease and systemic autoimmunity

Into the Heart of Systemic Autoimmune Diseases Franco Franceschini, Antonio Brucato, Micaela Fredi, Silvia Piantoni, 2024-03-27 Systemic autoimmune diseases are a heterogeneous group of disorders characterized by humoral and cell mediated immune responses against various self constituents In specific cases the heart and cardiovascular CV system are the primary organs targeted by the disease On the other hand several systemic autoimmune conditions are linked to enhanced atherosclerosis with a consequently high CV morbidity and mortality rates Persistent low grade inflammation in the vascular wall is described to be important in the physiopathology of CV events At first inflammation is

linked to endothelial dysfunction supporting the proliferation of vascular smooth muscle cells with subsequent vascular remodeling Furthermore the infiltration of innate and adaptive immune cells promotes a milieu of molecules that contributes to the perpetuation of inflammation itself Although CV risk assessment should be part of routine care in patients with autoimmune diseases no disease specific models are currently available for this purpose The main pillars of CV risk reduction are pharmacological and nonpharmacological management of cardiovascular CV risk factors as well as tight control of disease activity
