

Diabetes and Heart Disease

What is the connection?

High blood sugar can cause damage to the walls of blood vessels

This damage can increase the build-up of fatty material

Over time, blood vessels narrow and blood flow is reduced

The Heart in Diabetes J.C. Chatham, C. Forder, John H McNeill, 1996-04-01

Hormones and the Heart in Health and Disease Leonard Share, 1999-06-01 The maintenance of arterial blood pressure and the distribution of blood flow to the various organs of the body depends on the control of the pumping action of the heart and of the resistance of the vascular beds in the individual organs in accordance with their metabolic needs These controls are achieved through the integrated actions of circulating hormones humoral factors that are synthesized and released in the heart and blood vessels and the autonomic nervous system The heart however is not only the target for the direct and indirect actions of a number of hormones and humoral factors it is also an endocrine organ in the traditional sense synthesizing and secreting into the circulation chemical factors that act at distant sites In this treatise Hormones and the Heart in Health and Disease we interpret endocrinology broadly and consider traditional hormones as well as autoids that are secreted by the heart or that act on it In this overview the relevant chapters are indicated in parentheses The discovery of atrial natriuretic peptide ANP atrial natriuretic factor ANF in the 1980s indicated that the heart does indeed function as an endocrine organ in the classic sense ANP Chapter I is synthesized in the heart and secreted into the circulation for actions on the kidney where it is a potent natriuretic agent and on the vasculature where it causes vasodilation ANP can also affect myocardial contractility

Autonomic Innervation of the Heart Riemer H.J.A. Slart, René A. Tio, Philip H. Elsinga, Markus Schwaiger, 2015-01-30. This book explains in detail the potential value of the hybrid modalities SPECT/CT and PET/CT in the imaging of cardiac innervation in a wide range of conditions and diseases including ischemic heart disease, diabetes mellitus, heart failure, amyloidosis, heart transplantation and ventricular arrhythmias. Imaging of the brain-heart axis in neurodegenerative disease and stress and of cardiotoxicity is also discussed. The roles of the various available tracers are fully considered and individual chapters address radiopharmaceutical development, nuclear medicine imaging physics and kinetic modeling software. Highly relevant background information is included on the autonomic nervous system of the heart and its pathophysiology and in addition future perspectives are discussed. Awareness of the importance of autonomic innervation of the heart for the optimal management of cardiac patients is growing and there is an evident need for objective measurement techniques or imaging modalities. In this context *Autonomic Innervation of the Heart* will be of wide interest to clinicians, researchers and industry.

Pathophysiology of Heart Disease Naranjan S. Dhalla, Pawan K. Singal, Robert E. Beamish, 2012-12-06. It is indeed ironical that in the absence of a complete knowledge of Pathophysiology, clinical cardiologists are left with no choice but to do the best they can to help the patient with the armamentarium of drugs at their disposal. But nothing could be further from truth than to treat the diagnosed end point of a disease process without a full understanding of its pathophysiology. This point was eloquently made by Dr Arnold Katz in his Presidential Address, Chapter 1 at the 8th Annual Meeting of the American Section of the International Society for Heart Research held in Winnipeg, Canada, July 8-11, 1986. This volume represents a part of the scientific proceedings of this Meeting. From a reading of this treatise it will become evident that discoveries of newer scientific facts as well as a better understanding of pathophysiology are continuously influencing/improving our therapeutic approaches in modern medicine. In this book, latest

biochemical physiological and pharmacological findings on different experimental models such as Myocardial hypertrophy Hypertension and heart failure Diabetes Cardio myopathies and Cardiac function in shock are described by internationally recognised experts Hopefully information presented here will provide another building block to the edifice of Science of Cardiology which we all are trying to create Acknowledgements We are grateful to the following Agencies and Foundations for their generous financial support of the Symposium which formed the basis of this book A Major Contributors 1 Manitoba Heart Foundation 2 Sterling Winthrop Research Institute 3 Squibb Canada Inc Frontiers in Clinical Drug Research - Diabetes and Obesity: Volume 6 Atta-ur-Rahman,2021-11-05 Frontiers in Clinical Drug Research Diabetes and Obesity is a book series that brings updated reviews to readers interested in advances in the development of pharmaceutical agents for the treatment of two metabolic diseases diabetes and obesity The scope of the series covers a range of topics including the medicinal chemistry pharmacology molecular biology and biochemistry of natural and synthetic drugs affecting endocrine and metabolic processes linked with diabetes and obesity Reviews in this series also include research on specific receptor targets and pre clinical clinical findings on novel pharmaceutical agents Frontiers in Clinical Drug Research Diabetes and Obesity is a valuable resource for pharmaceutical scientists and postgraduate students seeking updated and critically important information for developing clinical trials and devising research plans in the field of diabetes and obesity research The sixth volume of this series features 6 reviews which are informative guides to therapy and drug administration in diabetes and metabolic syndrome for both the medical specialist and the pharmacologist The failing heart in diabetes with special emphasis on prevention Flavonoids as prominent anti diabetic agents Chemosensor in glucose monitoring advances and challenges Synergistic drugs and polyherbal formulations for obesity current status and future prospectives Urge for herbal anti diabetic medicines towards clinical and therapeutic implications Curcuma longa as dietary supplement and diabetes mellitus evidence from experimental studies *Cardiodiabetes Update* HK Chopra,2018-03-31 Cardiodiabetes refers to heart disease that develops in people who have diabetes Compared with people who don't have diabetes people who have diabetes are at higher risk of heart disease have additional causes of heart disease may develop heart disease at a younger age and may have more severe heart disease With nearly 1000 pages this manual is a complete guide to the diagnosis and management of cardiodiabetes Divided into nine sections each chapter addresses a separate and distinct issue of clinical relevance The book provides an insight into clinical spectrum diagnostic methodology management strategies nutraceutical and obesity care arrhythmia management coronary intervention cardiac surgery rehabilitation and future directions in cardiodiabetes care Additionally the text features discussion on strategies to reduce the growing prevalence of diabetes and the current pathophysiological understanding of cardiovascular comorbidities in patients with diabetes More than 500 clinical photographs illustrations tables and boxes further enhance the comprehensive text Key points Nearly 1000 pages providing in depth discussion on diagnosis and management of cardiodiabetes Each chapter addresses a separate issue

Diabetes Preoperative Evaluation and Intraoperative Management Simon de Lange M D Ph D **Frontiers in Cardiovascular Health** Naranjan S. Dhalla, Arun Chockalingam, H. Ivan Berkowitz, Pawan K. Singal, 2012-12-06 The Frontiers in

Cardiovascular Health varies between and within nations depending upon the level at which the battle is fought for better cardiovascular health According to the 1997 World Health Report 15 million deaths i.e. 30% of the total number of deaths were attributable to cardiovascular diseases and this number is on the rise The projection for the year 2020 is quite alarming with an expected cardiovascular mortality reaching 50 million Much of this burden is projected to occur in developing countries more specifically in the most populous countries of the world namely China and India These countries are already burdened with infectious and parasitic diseases and are trying to eradicate such diseases With increasing life expectancies people all over the world especially in developing countries are exposed to degenerative atherosclerosis resulting in increased cardiovascular mortality and morbidity In developing countries resources available for health care are very limited For example many of the African countries spend less than 10 per person per year on his/her entire health care let alone cardiovascular health The average health care budget for nearly two thirds of the global population is well below 100 per year on a per capita basis Therefore in developing countries health promotion and primary prevention are the frontiers by necessity Improving awareness and health education is not only a matter of choice but is an absolute necessity
