Music as an Art Roger Scruton,2018-08-23 In the latest of his books exploring a lifetime s passion for music bestselling author and philosopher Roger Scruton brings his immense critical faculties to bear on a panoply of different musical genres both contemporary and classical Music as an Art

begins by examining music through a philosophical lens engaging in discussions about tonality music and the moral life music and cognitive science and German idealism as well as recalling the author's struggle to encourage his students to distinguish the qualities of good music Scruton then explains via erudite chapters on Schubert Britten Rameau opera and film how we can develop greater judgement in music recognising both good taste and bad establishing musical values as well as musical pleasures As Scruton argues in this book in earlier times our musical culture had secure foundations in the church the concert hall and the home in the ceremonies and celebrations of ordinary life religion and manners Yet we no longer live in that world Fewer people now play instruments and music is for many a form of largely solitary enjoyment As he shows in *Music as an Art* we live at a critical time for classical music and this book is an important contribution to the debate of which we stand in need concerning the place of music in Western civilization

Perceptual Aspects Of Sound Scattering In Concert Halls Renzo Vitale, 2015-06-16 This work aims to expand the understanding of sound scattering in architectural spaces as well as the comprehension of its influence on the auditory perception in concert halls The notion of scattering coefficient which numerically represents the physical phenomenon of sound scattering constitutes the main paradigm for the entire work In a first part the scattering coefficient is introduced in its meaning and implications New empirical data of scattering objects have been determined and a revised scale model of a reverberation chamber for avoiding measurement accuracies is presented A case study of classroom acoustics proves the benefit of experimental data on the accuracy of acoustic computer simulations Furthermore the implementation of scattering coefficient in different room acoustic computer software is shown by using a concert hall as a case study In a second part the relationship between scattering coefficient and auditory perception is explored Binaural impulse responses have been determined for different scenarios such as two virtual enclosed spaces and one real concert hall and convolved with music samples to be used in listening tests Results from listening tests show how changes in scattering coefficient of diffusing surfaces affect the perception of music among the audience in concert halls

Music and Schema Theory Marc Leman, 2012-12-06 Music is an important domain of application for schema theory The perceptual structures for pitch and timbre have been mapped via schemata with results that have contributed to a better understanding of music perception Yet we still need to know how a schema comes into existence or how it functions in a particular perception task This book provides a foundation for the understanding of the emergence and functionality of schemata by means of computer based simulations of tone center perception It is about how memory structures self organize and how they use contextual information to guide perception
