Lamers, Pieter D.

Verdouw, 2012-12-06 The chapters in this volume are the Proceedings of the Satellite Symposium of the XVIth World Congress of the International Society for Heart Research on Signal Transduction in Normal and Diseased Myocardium which was held in Rotterdam at the Faculty of Medicine Health Sciences of the Erasmus University June 30 and July 1 1995 Diverse and distinct auto para and endocrine stimuli arriving at the surface of endothelium smooth muscle cells cardiomyocytes and fibroblasts within the myocardium engage cell type specific receptors which lead to transmission of signals across the cell plasma membrane and result in the production and activation of second messengers The most common mechanism by which these second messengers function is via direct or indirect activation of specific protein kinases The current challenge for scientists is to identify the specific substrates e g metabolic enzymes Ca^{2+} regulating proteins transcription and mitotic factors for the many protein kinases to elucidate the biological significance of the cell type specific expression heterogeneity of signalling proteins e g membrane receptors isoenzymes of protein kinase C G proteins and to unravel the cross talk interaction between the signalling systems e g phospholipase C with adenylate cyclase and phospholipase C with phospholipase D The multiplicity of receptor types G proteins effector proteins second messengers and protein kinases their substrate proteins and the cross talk interactions in the myocardium raises fundamental questions about the mechanisms that ensure the precision and timing of the myocardial responses to hormonal and pharmacological stimuli This book provides an up to date source of information for all scientists and clinicians interested in the mechanisms by which external

signals are transmitted to the interior and regulation of a variety of physiological pathological and pharmacological responses

Heart Metabolism in Failure
R.A. Altschuld, R.A. Haworth, 1998-09-21 Heart failure continues to be a major public health problem in the United States with close to half a million new cases diagnosed each year Moreover deaths from heart failure are on the increase in part because of advances in the treatment of other fatal diseases and in part from the prevalence of lifestyles indifferent to the risk factors for heart disease This is not to say that no progress has been made in the treatment of heart failure While for many years treatment was confined to the management of the symptoms in recent years with the advent of ACE inhibitor and blacker therapies real improvements in cardiac function and life expectancy have been achieved Volume 4B Leier On a more basic level enormous advances have been made in describing many of the changes in structure and function of the heart and the parallel neurohumoral and circulatory adaptations that occur during the onset of failure These advances have been made not only by using various animal models of heart failure but also using fresh failing human heart tissue which has become readily available for experimental investigation since the advent of cardiac transplantation Understanding the significance of many of these changes that occur during the transition to failure and the role they play in the etiology of failure is however a much more difficult task These are exciting times in heart failure research It is as though many of the pieces of the jigsaw puzzle are available but the puzzle has yet to be assembled The objective of these volumes is to bring together some advances that have been made in recent years in defining one aspect of the failing heart that is the role of altered metabolism in order to facilitate assembly of the puzzle

Cardiac Fibrosis and Heart Failure: Cause or Effect? Ian M.C. Dixon, Jeffrey T. Wagle, 2015-06-29 The unique biology of cardiac fibroblasts and related cells such as cardiac myofibroblasts and valvular interstitial cells distinguish them from other fibroblastic cells a concept that is only beginning to be widely appreciated Further the natural signals that stimulate and inhibit cardiac fibrosis within these cells are not well understood This volume compiles articles that address the molecular mechanisms that control the synthesis and secretion of the cardiac ECM The book showcases chapters that highlight discussion of role of Transforming Growth Factor TGF an important fibrogenic cytokine and its downstream effectors SMAD in many cardiac diseases Further the contributions highlight information to discuss endogenous inhibitors of cardiac fibrosis as well as advances in tissue engineering specific to matrix in the heart Finally discussions of unifying mechanisms of matrix remodeling in valves and myocardium are presented The mechanisms involved in the stimulation of cardiac fibrosis are not fully understood In most cases the marginal attenuation of cardiac fibrosis as a result of a given therapy is a beneficial side effect linked to other primary effects on other cells especially cardiomyocytes Very few drugs or agents are known to affect the function and dysfunction of cardiac fibroblasts and myofibroblasts alone The book helps to translate the information gathered within to allow us to alter the course of

fibrogenic events that are typical of cardiac fibrosis and thereby reduce their burden on the patient and on society itself
