TITLE – *Evaluation of psychotherapies referring to psychoanalysis. A brief discussion of the reasons and methods*

ABSTRACT – Over the last twenty years, therapies referring to psychoanalysis have been the subject of several dozens of randomized controlled trials. They have been shown to be as effective as other talking psychotherapies in treating the most common mental disorders. However, this approach, which originated in somatic medicine, has been unable to shed light on the details of the therapeutic processes leading to patient improvement. This observation leads many authors to recommend case studies, as they provide practitioners with illuminating feedback and a necessary confrontation with their theoretical presuppositions.

KEY WORDS – psychotherapy, psychoanalysis, evaluation, clinical trials, case studies.

Faciliter les changements en psychothérapie François Borgeat, 2021-11-02 La psychothérapie vise un changement personnel et cognitif difficile quelles que soient les méthodes utilisées Tous les thérapeutes sont confrontés des résistances au changement avec certains patients malgré une thérapie bien conduite et suivie régulièrement par ceux-ci Pour dépasser ces situations de stagnation l'auteur a élaboré une stratégie complémentaire aux psychothérapies visant particulièrement les symptômes résiduels ou résistants malgré une bonne démarche de psychothérapie Inspirée de la thérapie cognitive elle met en pratique l'amorçage préconscient initialement utilisé dans le domaine de la perception et du traitement de l'information Son utilisation nouvelle en psychothérapie vise faciliter le changement cognitif en rendant plus accessible une façon de penser ou un discours intérieur souhaité par le patient parce que plus réaliste et plus adapté à sa réalité La méthode comprend cinq tapes et inclut une courte préconscientie préliminaire La nouveauté réside aussi dans l'informatisation de cette méthode le programme APAP augmentation de la psychothérapie par amorçage préconscient facilite l'accès à la stratégie et permet un travail autonome pour le patient tout en s'appuyant sur la relation entre le patient et son thérapeute dont le rôle demeure central pour assister et guider le patient Le programme construit de manière ouverte peut s'appliquer divers troubles et son efficacité a été surtout démontrée chez des

patients souffrant de troubles anxieux traités en TCC. Il se montre aussi facilement compatible avec les autres approches thérapeutiques. Cette nouvelle stratégie transversale complète l'arsenal des psychothérapeutes, psychiatres et psychologues en leur offrant un outil additionnel pour des situations de persistance de symptômes gênants ou de stagnation thérapeutique.
