Lexicalization a process of language change has been conceptualized in a variety of ways Broadly defined as the adoption of concepts into the lexicon it has been viewed by syntacticians as the reverse process of grammaticalization by morphologists as a routine process of word formation and by semanticists as the development of concrete meanings In this up to date survey Laurel Brinton and Elizabeth Traugott examine the various conceptualizations of lexicalization that have been presented in the literature In light of contemporary work on grammaticalization they then propose a new unified model of lexicalization and grammaticalization Their approach is illustrated with a variety of case studies from the history of English including present participles multi word verbs adverbs and discourse markers as well as some examples from other Indo European languages The first review of the various approaches to lexicalization this book will be invaluable to students and scholars of historical linguistics and language change      New Trends in Grammaticalization and Language Change Sylvie Hancil,Tine Breban,José Vicente Lozano,2018-12-06 The chapters in this volume present a state of the art of grammaticalization research in the 2010s They are concerned with the application of new models such as constructionalization the ongoing debate about the status and modelling of the development of discourse markers and reveal a renewed interest in the typological application of grammaticalization and in the cognitive motivations for unidirectionality The contributors consider data from a wide range of languages including several that have not or marginally been looked at in terms of grammaticalization Chinese Dutch varieties of English French German Japanese Maltese Old Saxon Spanish and languages of the South Caucasian and Zhuang Tai Kadai families The chapters range from theoretical discussions to fine grained analyses of new historical and comparative language data This volume will be of interest to linguists studying morphosyntactic changes in a range of languages and in particular to those interested in models for grammatical change      Exaptation and Language Change Muriel Norde,Freek Van de Velde,2016-02-24 This volume is the first collection of papers that is exclusively dedicated to the concept of exaptation a notion from evolutionary biology that was famously introduced into linguistics by Roger Lass in 1990 The past quarter century has seen a heated debate on the properties of linguistic exaptation its demarcation from other processes of linguistic change and indeed the question of whether it is a useful concept in historical linguistics at all The contributions in the present volume reflect these diverging points of view Along with a comprehensive introduction covering the history of the notion of exaptation from its conception in the field of biology to its adoption in linguistics the book offers extensive discussion of the concept from various theoretical perspectives detailed case studies as well as critical reviews of some stock examples The book will be of interest to scholars working in the fields of evolutionary linguistics historical linguistics and the history of linguistics      *Italian Clitics* Cinzia Russi,2008-08-27 After reviewing from a grammaticalization perspective the main stages in the evolution of Italian object clitic pronouns the book discusses the distinctive morphosyntactic semantic and pragmatic features of Italian clitics In particular the book offers an original study of the most common examples of so called *verbi procomplementari* verbs which are characterized by the

incorporation of clitics that no longer function as pronouns and which are widely used in present day Italian. Their emergence involves both grammaticalization of the clitic pronoun into an obligatory element and lexicalization of the verb clitic sequence. This study is essentially descriptive and maximally data driven. The discussion of grammaticalization and lexicalization is reduced to the essentials and aims primarily at defining how these terms which have received different and at times divergent interpretations are employed in the book. The book is accessible to a wide and varied readership which includes Italian and Romance linguists of functional and formal orientation. Italian language scholars, grammaticalization scholars interested in new case studies as well as students of language change and variation.

**New Reflections on Grammaticalization** Ilse Wischer, Gabriele Diewald, 2002-04-12. The contributions in this volume cover a wide range of theoretical and methodological issues and raise a number of new questions that indicate the future direction of grammaticalization studies. The volume focuses on issues such as grammaticalization and lexicalization, the unidirectionality hypothesis, the issue of the relevance of contexts for grammaticalization, the description of grammaticalization paths. Much of the current work concentrates on such categories as discourse markers, honorifics or classifiers which have not previously been central to works on grammaticalization. Other studies take a new perspective on known grammaticalization paths by applying concepts adopted from other linguistic fields such as prototype theory, morphocentricity or by discussing their findings from a comparative or typological angle, presenting data from a large number of languages often based on extensive empirical investigations of written and spoken text corpora.

**Pathways of Change** Olga Fischer, Anette Rosenbach, Dieter Stein, 2000-01-01. There is a continual growth of interest among linguists of all theoretical denominations in grammaticalization, a concept central to many linguistic change theories. However, the discussion of grammaticalization processes has often suffered from a shortage of concrete empirical studies from one of the best documented languages in the world, English. *Pathways of Change* contains discussion of new data and provides theoretical lead articles based on these data that will help sharpen the theoretical aspects involved such as the definition and the logical connection of the component processes of grammaticalization. The volume is concentrated around a number of themes that are important or controversial in grammaticalization studies such as the principle of unidirectionality, the relation between lexicalization and grammaticalization and connected with these two factors, the possibility of degrammaticalization, the way iconicity interweaves with grammaticalization processes and with the phenomenon of grammaticalization on a synchronic or discourse level, also often termed subjectification.

**Historical Linguistics 2005** Joe Salmons, Shannon Dubenion-Smith, 2007. Printbegrnsninger: Der kan printes 10 sider ad gangen og max 40 sider pr session.

**The Limits of Grammaticalization** Anna Giacalone Ramat, Paul J. Hopper, 1998-07-15. The earliest use of the term grammaticalization was to refer to the process whereby lexical words of a language such as English keep in he keeps bees become grammatical forms such as the auxiliary in he keeps looking at me. Changes of this kind which involve semantic fading and a downshift from a major to a minor

category have generally been agreed to come under the heading of grammaticalization. But other changes that equally contribute to new grammatical forms do not involve this kind of fading. In recent years a debate has arisen over how to constrain the term theoretically. Is grammaticalization to be distinguished from lexicalization, the creation and fixing of new words out of older patterns of compounding? If so, how is the line to be drawn between a form that is grammatical and one that is lexical? Should the term grammaticalization be extended to the study of the origins of grammatical constructions in general? If so, it will have to include broader issues such as word order change and the reanalysis of phrases. What principles govern these processes? Is grammaticalization a unidirectional event or can change occur in the reverse direction? The authors of the papers in this volume approach these important questions from a variety of data types including historical texts, creoles and a typologically broad sample of modern and ancient languages.

*Grammaticalization* Heiko Narrog, Bernd Heine, 2021

This textbook introduces and explains the fundamental issues, major research questions and current approaches in the study of grammaticalization. Each chapter offers guidance on further reading and concludes with study questions to encourage further discussion. There is also a glossary of key terminology in the field.

**Sign Language** Roland Pfau, Markus Steinbach, Bencie Woll, 2012-08-31

Sign language linguists show here that all questions relevant to the linguistic investigation of spoken languages can be asked about sign languages. Conversely, questions that sign language linguists consider even if spoken language researchers have not asked them yet should also be asked of spoken languages. The HSK handbook *Sign Language* aims to provide a concise and comprehensive overview of the state of the art in sign language linguistics. It includes 44 chapters written by leading researchers in the field that address issues in language typology, sign language grammar, psycholinguistics, neurolinguistics, sociolinguistics and language documentation and transcription. Crucially, all topics are presented in a way that makes them accessible to linguists who are not familiar with sign language linguistics.

*The Dynamics of Language Use* Christopher Butler, María A. Gómez-González, Susana María Doval Suárez, 2005-01-01

This book brings together a collection of articles characterized by two main themes: the contrastive study of parallel phenomena in two or more languages and an essentially functional approach in which language is regarded first and foremost as a rich and complex communication system inextricably embedded in sociocultural and psychological contexts of use. The majority of the studies reported are empirical in nature, many making use of corpora or other textual materials in the language(s) under investigation. The book begins with an introductory section in which the editors provide surveys of the state of the art in both functional and contrastive linguistics. The other five sections of the volume are devoted to: i) a cognitive perspective on form and function; ii) information structure; iii) collocations and formulaic language; iv) language learning and v) discourse and culture.

**Constructionalization and Constructional Changes** Elizabeth Closs Traugott, Graeme Trousdale, 2013-11-07

Elizabeth Closs Traugott and Graeme Trousdale develop an approach to language change based on construction grammar. Construction grammar is a theory of signs construed at the level of the phrase, clause and complex

sentence Until now it has been mainly synchronic The authors use it to reconceptualize grammaticalization the process by which verbs like to have lose semantic content and gain grammatical functions or word order moves from discourse prominent to syntax prominent and lexicalization in which idioms become fixed and complex words simplified Basing their argument on the notions that language is made up of language specific form meaning pairings and that there is a gradient between lexical and grammatical constructions Professor Traugott and Dr Trousdale suggest that language change proceeds by micro steps that involve closely related changes in syntax morphology phonology semantics pragmatics and discourse functions They illustrate their exposition with numerous English examples drawn from Anglo Saxon times to the present many of which they discuss in depth The book is organized in six chapters The first outlines the approach and the questions to be addressed The second reviews usage based models of language change The third considers the relation between grammatical constructionalization and grammaticalization Chapters 4 and 5 focus respectively on lexical constructionalization and the role of context The final chapter draws the authors arguments together and outlines prospects for further research Constructionalization and Constructional Changes propounds and demonstrates a new and productive approach to historical linguistics *Constructions and Language Change* Alexander Bergs, Gabriele Diewald, 2008-11-03 Studies in diachronic linguistics increasingly acknowledge that linguistic change is highly context dependent and somehow tied to constructions as linguistic units This is the first volume to investigate the role of constructions and the potential of constructional approaches in linguistic change The contributions in this volume comprise both theoretical and empirical studies all of which are accessible for a general audience While some contributions explicitly aim at comparing and unifying concepts from both traditional grammatical theories and recent construction grammar approaches others offer detailed case studies of exemplary problems from a constructional point of view The papers offer a cross linguistic perspective and deal with a number of different language families ranging from Germanic to Austronesian **English Historical Linguistics.**

**Volume 2** Alexander Bergs, Laurel J. Brinton, 2012-10-01 Degrammaticalization Muriel Norde, 2009-09-17

Grammaticalization is a well attested process of linguistic change in which a lexical item becomes a function word which may be further reduced to a clitic or affix Proponents of the universality of grammaticalization have usually argued that it is unidirectional and have thus found it a useful tool in linguistic reconstruction In this book Prof Norde shows that change is reversible on all levels semantic morphological syntactic and phonological As a consequence the alleged unidirectionality of grammaticalization is not a reliable reconstructional tool even if degrammaticalization is a rare phenomenon

Degrammaticalization she argues is essentially different from grammaticalization it usually comprises a single change examples being shifts from affix to clitic or from function word to lexical item And where grammaticalization can be seen as a process degrammaticalization is often the by product of other changes Nevertheless she shows that it can be described like grammaticalization in a principled way in order to establish whether a change in a word has been from more to less

grammatical or vice versa and the stages by which it has become so Using data from different languages she constructs a typology of degrammaticalization changes She explains why degrammaticalization is so rare and why some linguists have such strongly negative feelings about the possibility of its existence She adds to the understanding of grammaticalization and makes a significant contribution to methods of linguistic reconstruction and the study of language change She writes clearly aiming to be understood by advanced undergraduate students as well as appealing to scholars and graduate researchers in historical linguistics

**What makes Grammaticalization?** Walter Bisang, Nikolaus P. Himmelmann, Björn Wiemer, 2009-02-26 The status of grammaticalization has been the subject of many controversial discussions The contributions to What makes Grammaticalization approach the prevalent phenomenon from the angle of language structure and focus on the interrelation between the levels of phonology pragmatics inference discourse and the lexicon and some of them try to integrate the areal perspective A wealth of data from Slavonic languages as well as from languages of other genetic and areal affiliation is discussed The book is of interest to linguists specializing in grammaticalization lexicalization and morphological typology to language typologists as well as to functional historical and cognitive linguists

**Between Grammar and Lexicon** Ellen Contini-Morava, Y. Tobin, 2000 The essays in this volume explore the relationship between lexical and grammatical categories calling into question the strict dichotomy between the two that is sometimes assumed
