Seismic Isolation, Energy Dissipation and Active Vibration Control of Structures Gian Paolo

Cimellaro, 2023-01-06 This volume gathers the proceedings of the 17th World Conference on Seismic Isolation 17WCSI held in Turin Italy on September 11-15, 2022. Endorsed by ASSISI Association Anti Seismic Systems International Society, the conference discussed state of the art information as well as emerging concepts and innovative applications related to seismic isolation, energy dissipation, and active vibration control of structures, resilience, and sustainability. The volume covers highly diverse topics including earthquake resistant construction, protection from natural and man-made impacts, safety of structures, vulnerability, international standards on structures with seismic isolation, seismic isolation in existing structures, and cultural heritage, seismic isolation in high-rise buildings, seismic protection of non-structural elements, equipment, and statues. The contributions, which are published after a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaboration among different specialists. **A**

Cp-Theory Problem Book Vladimir V. Tkachuk, 2014-06-24 This work is a continuation of the first volume published by Springer in 2011, entitled *A Cp Theory Problem Book*. Topological and Function Spaces. The first volume provided an introduction from scratch to Cp theory and general topology, preparing the reader for a professional understanding of Cp theory. In the last section of its main text, this present volume covers a wide variety of topics in Cp theory and general topology at the professional level, bringing the reader to the frontiers of modern research. The volume contains 500 problems and exercises with complete solutions. It can also be used as an introduction to advanced set theory and descriptive set theory. The book presents diverse topics of the theory of function spaces with the topology of pointwise convergence or Cp theory, which exists at the intersection of topological algebra, functional analysis, and general topology. Cp theory has an important role in the classification and unification of heterogeneous results from these areas of research. Moreover, this book gives a reasonably complete coverage of Cp theory through 500 carefully selected problems and exercises. By systematically introducing each of the major topics of Cp theory, the book is intended to bring a dedicated reader from basic topological principles to the frontiers of modern research. **Modern Techniques of Spectroscopy** Dheeraj Kumar Singh, Manik

Pradhan, Arnulf Materny, 2021-04-01 The book highlights recent developments in the field of spectroscopy by providing the readers with an updated and high level of overview. The focus of this book is on the introduction to concepts of modern spectroscopic techniques, recent technological innovations in this field, and current examples of applications to molecules and materials relevant for academia and industry. The book will be beneficial to researchers from various branches of science and technology and is intended to point them to modern techniques which might be useful for their specific problems. Spectroscopic techniques that are discussed include UV-Visible absorption spectroscopy, XPS, Raman spectroscopy, SERS, TERS, CARS, IR absorption spectroscopy, SFG, LIBS, Quantum cascade laser (QCL) spectroscopy, fluorescence spectroscopy.

ellipsometry cavity enhanced absorption spectroscopy such as cavity ring down spectroscopy CRDS and evanescent wave CRDS both in gas and condensed phases time resolved spectroscopy etc Applications introduced in the different chapters demonstrates the usefulness of the spectroscopic techniques for the characterization of fundamental properties of molecules e g in connection with environmental impact bio activity or usefulness for pharmaceutical drugs and materials important e g for nano science nuclear chemistry or bio applications The book presents how spectroscopic techniques can help to better understand substances which have also great impact on questions of social and economic relevance environment alternative energy etc

Zeptosecond Dynamics of Transfer-Triggered Breakup Kaitlin Jennifer Cook, 2018-08-23 Combining incisive experiments with the latest theoretical advances this book presents an extensive study of transfer triggered breakup the dominant process by which breakup occurs in reactions involving light weakly bound nuclei It demonstrates not only that lifetimes of resonant states shorter than a zeptosecond are crucially important for these reactions to suppress complete fusion but also that such short lifetimes are experimentally accessible By making quantitative predictions of the effect of breakup from short lived resonant states on incomplete fusion at above barrier energies the book suggests that the extent to which near target breakup can suppress complete fusion is much more limited than previously thought With an impressive amount of complex data and state of the art models which were developed modified and tested over course of the Ph D it examines all aspects of nuclear reactions nuclear models modern detectors and spectrometers as well as data analysis and offers a detailed discussion of experimental results and technical developments like new radioactive beams This excellent and beautifully written book presents outstanding quality experimental work that establishes a cornerstone in our understanding of the reaction dynamics of light weakly bound nuclei at energies around the Coulomb barrier
