Structures and Their Impact on Textile Design Jiří Militký, Mohanapriya Venkataraman, Aravin Prince Periyasamy, 2022-09-29 Books on Textiles tend to focus solely on aesthetic or technical points of view. Designers' understanding of special technical aspects of textile structure or the ability of researchers to grasp the design aspects would result in quantum leaps in innovations and creativity in the Textile domain. This book presents a holistic view integrating the viewpoints of designers and researchers. It presents previously unexplored features or possibilities mainly in the field of textile structure constructions and characteristics. The main aim is a unique proper blending of both the technical and aesthetic sides of textile. Without compromising on the technicalities, it simplifies complex concepts to elevate the understanding of fashion designers. On the other hand, it also provides a viewpoint on aesthetics. The chapters are designed to provide a good balance of content for both fashion designers and professionals. The initial chapter sets the foundation of understanding with a healthy discussion about the latest technical trends of textiles, functionalities, and their new applications. A dedicated chapter discusses the practical use of lighting effects of side-emitting optical fibers in conjunction with color effects for textile design purposes. Further chapters deal with smart textiles design in the context of sensation and perception, basic aspects of textiles structures necessary for their rational design, and color characteristics of materials useful for designers. The book includes a special chapter on analyzing the business landscape of textile design. Overall, this book is expected to cater to the needs and give special knowledge important for both textile specialists and fashion designers. **Ending Midlife Bias** Nancy S.

Jecker, 2020-05-01 We live at a time when the human lifespan has increased like never before. As average lifespans stretch to new lengths, what impact should this have on our values? Should our values change over the course of our ever-increasing lifespans? Nancy S. Jecker coins the term the life stage relativity of values to capture the idea that at different stages of our lives, different ethical concerns shift to the foreground. During early life, infants and small children hold dear the value of being cared for and nurtured by someone they trust, and their vulnerability and dependency make these the right values for them. By early adulthood and continuing into midlife, the capacity for greater physical and emotional independence gives people reason to place more emphasis on autonomy and the ability to freely choose and carry out their plan of life. During old age, heightened risk for chronic disease and disability gives us a reason to shift our focus again, emphasizing safeguarding our central capabilities and keeping our dignity and self-respect intact. Despite different values becoming central at different stages of life, we often assume the standpoint of someone in midlife who is in the midst of planning a future adulthood that stretches out before them. Jecker coins the term midlife bias to refer to the privileging of midlife. Midlife bias occurs when we assume that autonomy should be our central aim at all life stages and give it priority in a wide range of ethical decisions. The privileging of midlife raises fundamental problems of fairness. It also suggests the possibility of large gaps in the ethical principles and theories at hand. **Ending Midlife Bias: New Values for Old Age** addresses these concerns in a step-wise fashion, focusing on later life. Jecker first introduces a philosophical framework that extends moral theorizing to older adults.
