Estimation In Surveys With Nonresponse:

Estimation in Surveys with Nonresponse Carl-Erik Särndal, Sixten Lundström, 2005-08-05 Around the world a multitude of surveys are conducted every day on a variety of subjects and consequently surveys have become an accepted part of modern life. However, in recent years, survey estimates have been increasingly affected by rising trends in nonresponse with loss of accuracy as an undesirable result. Whilst it is possible to reduce nonresponse to some degree, it cannot be completely eliminated. Estimation techniques that account systematically for nonresponse and at the same time succeed in delivering acceptable accuracy are much needed. *Estimation in Surveys with Nonresponse* provides an overview of these techniques, presenting the view of nonresponse as a normal albeit undesirable feature of a sample survey, one whose potentially harmful effects are to be minimised. Builds in the nonresponse feature of survey data collection as an integral part of the theory, both for point estimation and for variance estimation. Promotes weighting through calibration as a new and powerful technique for surveys with nonresponse. Highlights the analysis of nonresponse bias in estimates and methods to minimize this bias. Includes computational tools to help identify the best variables for calibration. Discusses the use of imputation as a complement to weighting by calibration. Contains guidelines for dealing with frame imperfections and coverage errors. Features worked examples throughout the text using real data. The accessible style of *Estimation in Surveys with Nonresponse* will make this an invaluable tool for survey methodologists in national statistics agencies and private survey agencies. Researchers, teachers, and students of statistics, social sciences, and economics will benefit from the clear presentation and numerous examples.

[Handbook of Nonresponse in Household Surveys](#) Jelke Bethlehem, Fannie Cobben, Barry Schouten, 2011-04-27 A comprehensive one-stop guide to identifying, reducing, and managing nonresponse in household surveys. Nonresponse and its impact on the sample selection mechanism of a survey is a common problem that often arises while collecting survey data. *Handbook of Nonresponse in Household Surveys* is a complete guide to handling the nonresponse problem, outlining statistical methods and techniques for improving response rates and correcting response data. The authors begin with an introduction to the nonresponse problem along with basic concepts and definitions. Subsequent chapters present current theories and methods that enable survey researchers to skillfully account for nonresponse in their research. Exploring the latest developments in the field, the book also features an introduction to the R indicator as an indicator of survey quality. Discussion of the different causes of nonresponse. Extensive treatment of the selection and use of auxiliary information. Best practices for reapproaching nonrespondents. An overview of advanced nonresponse correction techniques. Coverage of adaptive survey design. Throughout the book, the treatment of each topic is presented in a uniform fashion. Following an introduction, each chapter presents the key theories and formulas underlying the topic and then illustrates common applications. Discussion concludes with a summary of the main concepts as well as a glossary of key terms and a set of exercises that allows readers to test their comprehension of the presented material. Hartman, Eric Schickler, Jasjeet S. Sekhon, 2020-10-22 We elaborate a general workflow of weighting based survey inference decomposing it into two main tasks The first is the estimation of population targets from one or more sources of auxiliary information The second is the construction of weights that calibrate the survey sample to the population targets We emphasize that these tasks are predicated on models of the measurement sampling and nonresponse process whose assumptions cannot be fully tested After describing this workflow in abstract terms we then describe in detail how it can be applied to the analysis of historical and contemporary opinion polls We also discuss extensions of the basic workflow particularly inference for causal quantities and multilevel regression and poststratification Implementation of

Nonresponse in Social Science Surveys National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on a Research Agenda for the Future of Social Science Data Collection, 2013-10-26 For many household surveys in the United States responses rates have been steadily declining for at least the past two decades A similar decline in survey response can be observed in all wealthy countries Efforts to raise response rates have used such strategies as monetary incentives or repeated attempts to contact sample members and obtain

completed interviews but these strategies increase the costs of surveys. This review addresses the core issues regarding survey nonresponse. It considers why response rates are declining and what that means for the accuracy of survey results. These trends are of particular concern for the social science community which is heavily invested in obtaining information from household surveys. The evidence to date makes it apparent that current trends in nonresponse if not arrested threaten to undermine the potential of household surveys to elicit information that assists in understanding social and economic issues. The trends also threaten to weaken the validity of inferences drawn from estimates based on those surveys. High nonresponse rates create the potential or risk for bias in estimates and affect survey design, data collection, estimation and analysis. The survey community is painfully aware of these trends and has responded aggressively to these threats. The interview modes employed by surveys in the public and private sectors have proliferated as new technologies and methods have emerged and matured. To the traditional trio of mail, telephone and face to face surveys have been added interactive voice response, IVR, audio computer assisted self interviewing, ACASI, web surveys and a number of hybrid methods. Similarly a growing research agenda has emerged in the past decade or so focused on seeking solutions to various aspects of the problem of survey nonresponse. The potential solutions that have been considered range from better training and deployment of interviewers to more use of incentives, better use of the information collected in the data collection and increased use of auxiliary information from other sources in survey design and data collection.

Nonresponse in Household Interview Surveys Robert M. Groves, Mick P. Couper, 2012-08-29. A comprehensive framework for both reduction of nonresponse and postsurvey adjustment for nonresponse. This book provides guidance and support for survey statisticians who need to develop models for postsurvey adjustment for nonresponse and for survey designers and practitioners attempting to reduce unit nonresponse in household interview surveys. It presents the results of an eight year research program that has assembled an unprecedented data set on respondents and nonrespondents from several major household surveys in the United States. Within a comprehensive conceptual framework of influences on nonresponse, the authors investigate every aspect of survey cooperation from the influences of household characteristics and social and environmental factors to the interaction between interviewers and householders and the design of the survey itself.

Nonresponse in Household Interview Surveys Provides a theoretical framework for understanding and studying household survey nonresponse. Empirically explores the individual and combined influences of several factors on nonresponse. Presents chapter introductions, summaries and discussions on practical implications to clarify concepts and theories. Supplies extensive references for further study and inquiry. **Nonresponse in Household Interview Surveys** is an important resource for professionals and students in survey methodology research methods as well as those who use survey methods or data in business, government and academia. It addresses issues critical to dealing with nonresponse in surveys, reducing

nonresponse during survey data collection and constructing statistical compensations for the effects of nonresponse on key survey estimates

Mixed-Mode Official Surveys Barry Schouten, Jan van den Brakel, Bart Buelens, Deirdre Giesen, Annemieke Luiten, Vivian Meertens, 2021-09-27 Mixed mode surveys have become a standard at many statistical institutes. However, the introduction of multiple modes in one design goes with challenges to both methodology and logistics. Mode specific representation and measurement differences become explicit and demand for solutions in data collection design, questionnaire design, and estimation. This is especially true when surveys are repeated and are input to long time series of official statistics. So how can statistical institutes deal with such changes? What are the origins of mode specific error? And how can they be dealt with? In this book, the authors provide answers to these questions and much more. Features: Concise introduction to all the key elements of mixed mode survey design and analysis. Realistic official statistics examples from three general population surveys. Suitable for survey managers and survey statisticians alike. An overview of mode specific representation and measurement errors and how to avoid, reduce, and adjust them.

Practical Methods for Design and Analysis of Complex Surveys Risto Lehtonen, Erkki Pahkinen, 2004-03-05 Large surveys are becoming increasingly available for public use and researchers are often faced with the need to analyse complex survey data to address key scientific issues. For proper analysis, it is also important to be aware of the different aspects of the design of complex surveys. Practical Methods for Design and Analysis of Complex Surveys features intermediate and advanced statistical techniques for use in designing and analysing complex surveys. This extensively updated edition features much new material and detailed practical exercises with links to a Web site helping instructors and enabling use for distance learning. Provides a comprehensive introduction to sampling and estimation in descriptive surveys, including design effect, statistic, and use of auxiliary data. Includes detailed coverage of complex survey analysis, including design based ANOVA and logistic regression with GEE estimation. Contains much new material, including handling of non-sampling errors and model assisted estimation for domains. Features detailed real life case studies, such as multilevel modeling in a multinational educational survey. Supported by a Web site containing software codes, real data sets, computerized exercises with solutions, and online training materials. Practical Methods for Design and Analysis of Complex Surveys provides a useful practical resource for researchers and practitioners working in the planning, implementation, or analysis of complex surveys and opinion polls, including business, educational, health, social, and socio-economic surveys and official statistics. In addition, the book is well suited for use on intermediate and advanced courses in survey sampling.

Improving Survey Response Ineke A. L. Stoop, Jaak Billiet, Achim Koch, Rory Fitzgerald, 2010-03-09 High response rates have traditionally been considered as one of the main indicators of survey quality Obtaining high response rates is sometimes difficult and expensive but clearly plays a beneficial role in terms of improving data quality It is becoming increasingly clear however that simply boosting response to achieve a higher response rate will not in itself eradicate nonresponse bias In this book the authors argue that high response rates should not be seen as a goal in themselves but rather as part of an overall survey quality strategy based on random probability sampling and aimed at minimising nonresponse bias Key features of Improving Survey Response A detailed coverage of nonresponse issues including a unique examination of cross national survey nonresponse processes and outcomes A discussion of the potential causes of nonresponse and practical strategies to combat it A detailed examination of the impact of nonresponse and of techniques for adjusting for it once it has occurred Examples of best practices and experiments drawn from 25 European countries Supplemented by the European Social Survey ESS websites containing materials for the measurement and analysis of nonresponse based on detailed country level response process datasets The book is designed to help survey researchers and those commissioning surveys by explaining how to prioritise the reduction of nonresponse bias rather than focusing on increasing the overall response rate It shows substantive researchers how nonresponse can impact on substantive outcomes
