Learning and the Infant Mind Amanda Woodward, Amy Needham, 2008-09-08 When asking how cognition comes to take its mature form learning seems to be an obvious factor to consider However until quite recently there has been very little contact between investigations of how infants learn and what infants know For example on the one hand research efforts focused on infants foundational conceptual knowledge what they know about the physical permanence of objects causal relations and human intentions often do not consider how learning may contribute to the structure of this knowledge On the other hand research efforts focused on infants perceptual and motor learning how they extract information from the environment tune their behavior patterns according to this information and generalize learning to new situations often do not consider the potential impacts of these perceptual and learning mechanisms the structure of conceptual knowledge Although each of these research efforts has made significant progress this research has done little to narrow the divide between the disparate traditions of learning and knowledge The chapters in this book document for the first time the insights that emerge when researchers who come from diverse domains and use different approaches make a genuine attempt to bridge this divide The authors consider both infants knowledge across domains including knowledge of objects physical relations between objects categories people and language and learning broadly construed bringing to bear direct laboratory manipulations of learning and more general considerations of the relations between experience and knowledge These authors have begun to consider whether and how the products of learning go beyond the input in several senses As a result several converging trends emerge across Whese diverse points of view These authors have begun to investigate whether infants derive relatively abstract representations from experience as well as the extent to which infants generalize

information learned in one context to a new context They have also begun to investigate the extent to which learning is generative constraining and informing subsequent learning

Beyond Modularity Annette Karmiloff-Smith,1995-09-25 Taking a stand midway between Piaget's constructivism and Fodor's nativism Annette Karmiloff Smith offers an exciting new theory of developmental change that embraces both approaches She shows how each can enrich the other and how both are necessary to a fundamental theory of human cognition Karmiloff Smith shifts the focus from what cognitive science can offer the study of development to what a developmental perspective can offer cognitive science In *Beyond Modularity* she treats cognitive development as a serious theoretical tool presenting a coherent portrait of the flexibility and creativity of the human mind as it develops from infancy to middle childhood Language physics mathematics commonsense psychology drawing and writing are explored in terms of the relationship between the innate capacities of the human mind and subsequent representational change which allows for such flexibility and creativity Karmiloff Smith also takes up the issue of the extent to which development involves domain specific versus domain general processes She concludes with discussions of nativism and domain specificity in relation to Piagetian theory and connectionism and shows how a developmental perspective can pinpoint what is missing from connectionist models of the mind

Delayed Posttraumatic Stress Disorders from Infancy Clancy D. McKenzie, M.D., 2009-09-23 Clancy D McKenzie MD and Lance S Wright MD I was very skeptical about Dr McKenzie s findings but the Finnish database on 6 000 schizophrenic patients revealed a very high level of statistical significance We confirmed a substantially higher rate of schizophrenia among those with siblings less than two years younger Sarnoff Mednick Social Science Research Institute University of Southern California The concepts presented are based on sound psychodynamic principles supported by findings in the literature Theory is a marriage between psychological and biological spanning the neuroses and psychoses from infancy to old age It identifies mental illness as one mechanism and psychology and biology as one process As such it is the beginning of a new unification theory of mental illness O Spurgeon English formerly of Temple University This book breaks with traditional thinking from the first paragraph offers an alternative to viewing treating managing and preventing serious emotional disorders breaks ground in suggesting the role of early trauma in accounting for mental disorders throughout the life cycle in identifying the two trauma mechanism and in the conceptualization of early traumatic events relating to the development of Borderlines Schizophrenia PTSD Autism Symbiosis and other disorders forcing academics to reevaluate our thinking The research is respectable adds to their arguments and is in support of their model Charles F Figley Psychosocial Stress Research Program Florida State University Through literature review and their own research Drs McKenzie and Wright demonstrate the profound relationship between early infant trauma and the later development of serious emotional disorders Evidence of early traumatic origin may soon be recognized as one of the most important research findings in recent decades This model goes beyond prevalent thinking to show that biological research only measures the results of the disease process and does not address the origins of mental illness This book identifies primary prevention and offers new treatment methods based on the recognition of the two trauma mechanism

Social Interaction and the Development of Knowledge Jeremy

I.M. Carpendale, Ulrich M ller, 2014-04-04 Written by highly respected theorists in psychology and philosophy the chapters in this book explicate and address fundamental epistemological issues involved in the problem of the relationship between the individual and the collective Different theoretical viewpoints are presented on this relationship as well as between the nature of rationality and morality relativism and universalism and enculturation and internalization Many chapters also highlight similarities and differences between these alternative frameworks and Piaget s theory and thus correct the misperception that Piaget had nothing to say about the social dimension of development Other chapters focus on the implications of these debates for the important topic areas of pedagogy moral development and the development of social understanding in infancy and childhood Although Piaget s theory is presented and evaluated by some of the chapters in this collection the authors remain critical and do not shy away from revising or extending Piaget s theory whenever it is deemed necessary Though the topic covered in this book is of fundamental importance in the social sciences it is rarely addressed in a sustained way as it is in this collection of chapters The book benefits social scientists interested in fundamental epistemological issues especially as these concern the relationship between the individual and the collective with implications for the conceptualization of morality and rationality Understanding Developmental Psychology Stephanie Thornton, Teodora

The Self Illusion Bruce Hood,2012-05-23 Most of us believe that we are an independent coherent self an individual inside our head who thinks watches wonders dreams and makes plans for the future This sense of our self may seem incredibly real but a wealth of recent scientific evidence reveals that it is not what it seems it is all an illusion In *The Self Illusion* Bruce Hood reveals how the self emerges during childhood and how the architecture of the developing brain enables us to become social animals dependent on each other Humans spend proportionally the greatest amount of time in childhood compared to any other animal It s not only to learn from others Hood notes but also to learn to become like others We learn to become our self Even as adults we are continually developing and elaborating this story learning to become different selves in different situations the work self the home self the parent self Moreover Hood shows that this already fluid process the construction of self has dramatically changed in recent years Social networking activities such as blogging Facebook LinkedIn and Twitter are fast becoming socialization on steroids The speed and ease at which we can form alliances and relationships are outstripping the same selection processes that shaped our self prior to the internet era Things will never be the same again in the online social world Hood offers our first glimpse

into this uncharted territory Who we are is in short a story of our self a narrative that our brain creates Like the science fiction movie we are living in a matrix that is our mind But Hood concludes that though the self is an illusion it is an illusion we must continue to embrace to live happily in human society *Contemporary Psychodynamic Psychotherapy* David Kealy, John S.
