Radical by Nature James T. Costa, 2025-01-07 A major biography of the brilliant naturalist traveler humanitarian and codiscoverer of natural selection Alfred Russel Wallace 1823-1913 was perhaps the most famed naturalist of the Victorian age His expeditions to remote Amazonia and southeast Asia were the stuff of legend A collector of thousands of species new to science he shared in the discovery of natural selection and founded the discipline of evolutionary biogeography *Radical by Nature* tells the story of Wallace's epic life and achievements from his stellar rise from humble origins to his complicated friendship with Charles Darwin and other leading scientific lights of Britain to his devotion to social causes and movements that threatened to alienate him from scientific society James Costa draws on letters notebooks and journals to provide a multifaceted account of a revolutionary life in science as well as Wallace's family life He shows how the self-taught Wallace doggedly pursued bold even radical ideas that caused a seismic shift in the natural sciences and how he also courted controversy with nonscientific pursuits such as spiritualism and socialism Costa describes Wallace's courageous social advocacy of women's rights labor reform and other important issues He also sheds light on Wallace's complex relationship with Darwin describing how Wallace graciously applauded his friend and rival becoming one of his most ardent defenders Weaving a revelatory narrative with the latest scholarship *Radical by Nature* paints a mesmerizing portrait of a multifaceted thinker driven by a singular passion for science a commitment to social justice and a lifelong sense of wonder

Language, Science and Popular Fiction in the Victorian Fin-de-Siècle Christine Ferguson, 2017-03-02 Christine Ferguson's timely study is the first comprehensive examination of the importance of language in forming a crucial nexus among popular fiction, biology, and philology at the Victorian fin de siècle. Focusing on a variety of literary and non-literary texts, the book maps out the dialogue between the Victorian life and social sciences most involved in the study of language and the literary genre frequently indicted for causing linguistic corruption and debasement: popular fiction. Ferguson demonstrates how Darwinian biological, philological, and anthropological accounts of primitive and animal language were co-opted into wider cultural debates about the apparent brutality of popular fiction and shows how popular novelists such as Marie Corelli, Grant Allen, H. G. Wells, H. Rider Haggard, and Bram Stoker used their fantastic narratives to radically reformulate the relationships among language, thought, and progress that underwrote much of the contemporary prejudice against mass literary taste. In its alignment of scientific, cultural, and popular discourses of human language, *Language, Science, and Popular Fiction in the Victorian Fin de Siècle* stands as a corrective to assessments of best-selling fiction's intellectual, ideological, and aesthetic simplicity.

Determined Spirits Christine Ferguson, 2012-04-04 Examines the Spiritualist movement's role in disseminating eugenic and hard hereditarian thought. Studying transatlantic spiritualist literature from the mid-19th to the early 20th century, Christine Ferguson focuses on its incorporation and dissemination of bio-determinist and eugenic thought. She asks why ideas about rational reproduction, hereditary determinism, and race improvement became so important to spiritualist novelists, journalists, and biographers in this period. She also examines how these concerns drove emerging Spiritualist understandings of disability, intelligence, crime, conception, the afterlife, and aesthetic production. The book draws on rare material, including articles and serialized fiction from Spiritualist periodicals such as *Light*, *The Two Worlds*, and *The Medium*, and *Daybreak*, as well as on Spiritualist healing, parentage, and sex manuals.

The Deeper Genome John Parrington, 2017 Mapping the human genome proved to be just the beginning in understanding our genes: what makes us human and how we can use the knowledge to cure inherited diseases. John Parrington describes an emerging picture of our genome in 3D, with many non-gene players and environmental influences that is far more complex and subtle than we ever imagined.

The Natural Law of Cycles James H. Bunn, 2017-07-28 *The Natural Law of Cycles* assembles scientific work from different disciplines to show how research on angular momentum and rotational symmetry can be used to develop a law of energy cycles as a local and global influence. Angular momentum regulates small-scale rotational cycles such as the swimming of fish.

in water the running of animals on land and the flight of birds in air Also it regulates large scale rotation cycles such as global currents of wind and water James H Bunn introduces concepts of symmetry balance and angular momentum showing how together they shape the mobile symmetries of animals Chapter 1 studies the configurations of animals as they move in a head first direction Chapter 2 shows how sea animals follow currents and tides generated by the rotational cycles of the earth In chapter 3 Bunn explores the biomechanical pace of walking as a partial cycle of rotating limbs On a large scale angular momentum governs balanced shifts in plate tectonics Chapter 4 begins with an examination of rotational wind patterns in terms of the counter balancing forces of angular momentum The author shows how these winds augment the flights of birds during migrations A final chapter centres on the conservation of energy as the most basic principle of science Bunn argues that in the nineteenth century the unity of nature was seen in the emergent concept of energy not matter as the source of power including the movements of animals and machines In each chapter Bunn features environmental writers who celebrate mobile symmetries This book will interest students naturalists and advocates of the environmental movement

The Malay Archipelago Alfred Russel Wallace, 1894 **Beastly** Keggie Carew, 2023-07-18 From an award winning writer a story rich exploration of our shared planet and the astonishing moving and troubled connections between humans and other animals Animals have shaped our minds our lives our land and our civilization Humanity would not have gotten very far without them and yet over the past two centuries the relationship has grown further apart In *Beastly* author Keggie Carew seeks to re enchant readers with the wild world reframing our understanding of what it is like to be an animal and what our role is as humans *Beastly* throws readers headlong into the mind blowing heart thumping glittering pageant of life and goes in search of our most revealing encounters with the animal world throughout the centuries to show where we ve come from and where we re going How did we domesticate animals and why did we choose sheep goats cows pigs horses and chickens but never zebras How can whales help solve climate change What does it mean when a young woman befriends a boar a gorilla tells a joke or a fish thinks What does a wren sing *Beastly* is a gorgeously written deeply researched and intensely felt journey into the splendor and genius of animals and the long complicated story of our interactions with them as humans Our relationship with animals has shaped our planet and if reimaged could save it **The Life of the Skies** Jonathan

Rosen, 2008-12-23 Aerial delights A history of America as seen through the eyes of a bird watcher John James Audubon arrived in America in 1803 when Thomas Jefferson was president and lived long enough to see his friend Samuel Morse send a telegraphic message from his house in New York City in the 1840s As a boy Teddy Roosevelt learned taxidermy from a man who had sailed up the Missouri River with Audubon and yet as president presided over America s entry into the twentieth century in which our ability to destroy ourselves and the natural world was no longer metaphorical Roosevelt an avid birder was born a hunter and died a conservationist Today forty six million Americans are bird watchers *The Life of the Skies* is a genre bending journey into the meaning of a pursuit born out of the tangled history of industrialization and nature longing

Jonathan Rosen set out on a quest not merely to see birds but to fathom their centrality historical and literary spiritual and scientific to a culture torn between the desire both to conquer and to conserve Rosen argues that bird watching is nothing less than the real national pastime indeed it is more than that because the field of play is the earth itself We are the players and the spectators and the outcome since bird and watcher are intimately connected is literally a matter of life and death

The Book That Changed America Randall Fuller, 2018-01-02 A compelling portrait of a unique moment in American history when the ideas of Charles Darwin reshaped American notions about nature religion science and race A lively and informative history The New York Times Book Review Throughout its history America has been torn in two by debates over ideals and beliefs Randall Fuller takes us back to one of those turning points in 1860 with the story of the influence of Charles Darwin's just published *On the Origin of Species* on five American intellectuals including Bronson Alcott Henry David Thoreau the child welfare reformer Charles Loring Brace and the abolitionist Franklin Sanborn Each of these figures seized on the book's assertion of a common ancestry for all creatures as a powerful argument against slavery one that helped provide scientific credibility to the cause of abolition Darwin's depiction of constant struggle and endless competition described America on the brink of civil war But some had difficulty aligning the new theory to their religious convictions and their faith in a higher power Thoreau perhaps the most profoundly affected all absorbed Darwin's views into his mysterious final work on species migration and the interconnectedness of all living things Creating a rich tableau of nineteenth century American intellectual culture as well as providing a fascinating biography of perhaps the single most important idea of that time *The Book That Changed America* is also an account of issues and concerns still with us today including racism and the enduring conflict between science and religion

Flat Earth Christine Garwood, 2008-08-05 Contrary to popular belief fostered in countless school classrooms the world over Christopher Columbus did not discover that the earth was round The idea of a spherical world had been widely accepted in educated circles from as early as the fourth century B C Yet bizarrely it was not until the supposedly more rational nineteenth century that the notion of a flat earth really took hold Even more bizarrely it persists to this day despite Apollo missions and widely publicized pictures of the decidedly spherical Earth from space Based on a range of original sources Garwood's history of flat Earth beliefs from the Babylonians to the present day raises issues central to the history and philosophy of science its relationship to religion and the making of human knowledge about the natural world *Flat Earth* is the first definitive study of one of history's most notorious and persistent ideas and it evokes all the intellectual philosophical and spiritual turmoil of the modern age Ranging from ancient Greece through Victorian England to modern day America this is a story that encompasses religion science and pseudoscience as well as a spectacular array of people and places Where else could eccentric aristocrats fundamentalist preachers and conspiracy theorists appear alongside Copernicus Newton and NASA except in an account of such a legendary misconception Thoroughly enjoyable and illuminating *Flat Earth* is social and intellectual history at its best *Darwin's Bards* John

Holmes, 2013-10-16 A comprehensive study of Darwin's legacy for religion, ecology and the arts. Includes over 50 complete poems and long extracts with an interpretative framework and close readings. Poets examined include Tennyson, Browning, Hardy, Frost, Ted Hughes, Patience. *Wallace, Darwin, and the Origin of Species* James T. Costa, 2014-06-16 Darwin is credited with discovering evolution through natural selection but Alfred Russel Wallace saw the same process at work in nature and elaborated the same theory. Dispelling misperceptions of Wallace as a secondary figure, James Costa reveals the two naturalists as equals in advancing one of the greatest scientific discoveries of all time. *The Cambridge Companion to Darwin* Michael Jonathan Sessions Hodge, 2009-03-05 This volume provides the reader with clear, lively and balanced introductions to the most recent scholarship on Darwin and his intellectual legacies. **"Perplexed in Faith"** Alisa Clapp-Itnyre, Julie Melnyk, 2015-02-27 In the last twenty years there has been a growing recognition of the centrality of religious beliefs to an understanding of Victorian literature and society. This interdisciplinary collection makes a significant contribution to post-secularist scholarship on Victorian culture, reflecting the great diversity of religious beliefs and doubts in Victorian Britain with essays on Protestant, Catholic, Jewish, Unitarian and spiritualist topics. Writing from a variety of disciplinary perspectives for an interdisciplinary audience, the essayists investigate religious belief using diverse historical and literary sources including journalism, hymns, paintings, travel writings, scientific papers, novels and poetry. Essays in the volume examine topics including: The relation between science and religion in the career of evolutionary biologist Alfred Russel Wallace; Thomas Prasch: The continuing significance of the Bible in geopolitical discourse; Eric Reisenauer: The role of children and children's hymns in the missionary and temperance movements; Alisa Clapp-Itnyre: The role of women in Christian and Jewish traditions; Julie Melnyk and Lindsay Dearinger: The revival of Catholicism and Catholic culture and practices; Katherine Haldane Grenier and Michelle Meinhardt: The occult religious society Golden Dawn; Sharon Cogdill: Faith in the writings of the Brontë sisters; Christine Coln: Charles Dickens; Jessica Hughes and George Eliot; Robert Koepp. **Alfred Russel Wallace** Patrick Armstrong, 2019-04-15 Sometimes referred to as the Father of Biogeography, Alfred Russel Wallace has come to be known as the co-originator of the theory of evolution through natural selection and he also wrote extensively on zoology, botany, anthropology, politics, astronomy and psychology. Although notorious in his day for his unpopular and eccentric beliefs, he is still recognized as one of the leading figures in nineteenth-century British science. In this book, Patrick Armstrong illuminates the many facets of Wallace's long life, which extended from 1823 until the eve of World War I. He shows Wallace to be in many ways a more interesting character than his colleague and friend, evolutionary scientist Charles Darwin. Taking a psychological approach, this compact yet comprehensive biography gives insight into a man who was frequently plagued with misfortune, legal problems, inability to obtain full-time employment and relationship troubles. All vexed him. Armstrong unlocks the life of a restless traveler who, although raised with a very ordinary education, would go on to become one of the most influential extraordinary scientists of his time. *Human Adaptability, Student Economy Edition*

Emilio Moran, 2018-10-03 This book focuses on mechanisms of human adaptability. It integrates findings from ecology, physiology, social anthropology, and geography around a set of problems or constraints posed by human habitats. DNA
