Drake, Michael Bonsall, Michael

R. Strand, Michael Strand, 2021 *Population Biology of Vector Borne Diseases* is the first comprehensive survey of this rapidly developing field. The chapter topics provide an up to date presentation of classical concepts, reviews of emerging trends, synthesis of existing knowledge and a prospective agenda for future research. The contributions offer authoritative and international perspectives from leading thinkers in the field. The dynamics of vector borne diseases are far more intrinsically ecological compared with their directly transmitted equivalents. The environmental dependence of ectotherm vectors means that vector borne pathogens are acutely sensitive to changing environmental conditions. Although perennially important, vector borne diseases such as malaria and dengue have deeply informed our understanding of vector borne diseases. Recent emerging viruses such as West Nile virus, Chikungunya virus and Zika virus have generated new scientific questions and practical problems. The study of vector borne disease has been a particularly rich source of ecological questions while ecological theory has provided the conceptual tools for thinking about their evolution, transmission and spatial extent. *Population Biology of Vector Borne Diseases* is an advanced textbook suitable for graduate level students taking courses in vector biology, population ecology, evolutionary ecology, disease ecology, medical entomology, viral ecology, evolution and parasitology as well as providing a key reference for researchers across these fields. **Annals of Applied Biology**, 1924
