Information Systems For Operations And Management:

Optimizing, Innovating, and Capitalizing on Information Systems for Operations Wang, John, 2013-02-28

Adapting the development of information systems for operations management is essential for the effectiveness of an organization's business strategy. Optimizing, Innovating, and Capitalizing on Information Systems for Operations presents research on the applications of information systems and its influence on business and operations management. Highlighting case studies, frameworks, and methodologies, this book aims to be useful for practitioners and academics in the fields of decision management and social sciences. **Service And Operations Management** Cengiz Haksever, Barry

Render, 2017-12-26. The purpose of this book is to provide cutting edge information on service management such as the role services play in an economy, service strategy, ethical issues in services, and service supply chains. It also covers basic topics of operations management including linear and goal programming, project management, inventory management, and forecasting. This book takes a multidisciplinary approach to services and operational management challenges; it draws upon the theory and practice in many fields of study such as economics, management science, statistics, psychology, sociology, ethics, and technology, to name a few. It contains chapters most textbooks do not include, such as ethics, management of public and non-profit service organizations, productivity, and measurement of performance, routing and scheduling of service vehicles. An Instructor's Solutions Manual is available upon request for all instructors who adopt this book as a course text. Please send your request to sales@wspc.com. **Attracting, Recruiting, and Retaining Skilled Staff for Transportation System**

Operations and Management Brian E. Cronin, 2012. The purpose of this project was to provide transportation agencies with strategies and resources to meet their needs for attracting, recruiting, and retaining transportation system operations and management (SOM) staff. The research described herein considers the potential supply and demand for SOM skills and staffing, the actions transportation agencies may take to attract, recruit, develop, and retain skilled staff with SOM capabilities, and the tools that are available or may be developed to assist agencies in attracting and recruiting skilled staff in this area. SOM draws on the knowledge of many disciplines, including for example, traffic engineering, intelligent transportation systems, maintenance, emergency response, traffic operations, traffic safety, incident management, performance measurement, and system planning, applied in a comprehensive approach to increase the efficiency and safety of the transportation system. SOM encompasses interactions among transportation modes and between the transportation system and other functions such as emergency management, public safety, and outreach. In this report, we provide information regarding the methodology, results, recommended action plans, and potential future research directions in relation to this project.
