*The Evolution of Economic and Innovation Systems* Andreas Pyka, John Foster, 2015-03-03. This book is at the cutting edge of the ongoing neo-Schumpeterian research program that investigates how economic growth and its fluctuation can be understood as the outcome of a historical process of economic evolution. Much of modern evolutionary economics has relied upon biological analogy, especially about natural selection. Although this is valid and useful, evolutionary economists have increasingly begun to build their analytical representations of economic evolution on understandings derived from complex systems science. In this book, the fact that economic systems are necessarily complex adaptive systems is explored both theoretically and empirically in a range of contexts. Throughout, there is a primary focus upon the interconnected processes of innovation and entrepreneurship, which are the ultimate sources of all economic growth. Twenty-two chapters are provided by renowned experts in the related fields of evolutionary economics and the economics of innovation.
