   The Theory of Info-Dynamics: Rational Foundations of Information-Knowledge Dynamics Kofi K. Dompere,2017-12-06 This book focuses on the development of a theory of info dynamics to support the theory of info statics in the general theory of information It establishes the rational foundations of information dynamics and how these foundations relate to the general socio natural dynamics from the primary to the derived categories in the universal existence and from the potential to the actual in the ontological space It also shows how these foundations relate to the general socio natural dynamics from the potential to the possible to give rise to the possibility space with possibilistic thinking from the possible to the probable to give rise to possibility space with probabilistic thinking and from the probable to the actual to give rise to the space of knowledge with paradigms of thought in the epistemological space The theory is developed to explain the general dynamics through various transformations in quality quantity space in relation to the nature of information flows at each variety transformation The theory explains the past present future connectivity of the evolving information structure in a manner that illuminates the transformation problem and its solution in the never ending information production within matter energy space under socio natural technologies to connect the theory of info statics which in turn presents explanations to the transformation problem and its solution The theoretical framework is developed with analytical tools based on the principle of opposites systems of actual potential polarities negative positive dualities under different time structures with the use of category theory fuzzy paradigm of thought and game theory in the fuzzy stochastic cost benefit space The rational foundations are enhanced with categorial analytics The value of the theory of info dynamics is demonstrated in the explanatory and prescriptive structures of the transformations of varieties and categorial varieties at each point of time and over time from parent offspring sequences It constitutes a general explanation of dynamics of information knowledge production through info processes and info processors induced by a socio natural infinite set of technologies in the construction destruction space   Information and Computation Gordana Dodig Crnkovic,Mark Burgin,2011 This volume provides a cutting edge view of the world s leading authorities in fields where information and computation play a central role   **From Animals to Animats 11** Stephane Doncieux,Benoit Girard,Agnes Guillot,John Hallam,Jean-Arcady Meyer,Jean-Baptiste Mouret,2010-08-11   *Guided Self-Organization: Inception* Mikhail Prokopenko,2013-12-19 Is it possible to guide the process of self organisation towards specific patterns and outcomes Wouldn t this be self contradictory After all a self organising process assumes a transition into a more organised form or towards a more structured functionality in the absence of centralised control Then how can we place the guiding elements so that they do not override rich choices potentially discoverable by an uncontrolled process This book presents different approaches to resolving this paradox In doing so the presented studies address a broad range of phenomena ranging from autopoietic systems to morphological computation and from small world networks to information cascades in swarms A large

variety of methods is employed from spontaneous symmetry breaking to information dynamics to evolutionary algorithms creating a rich spectrum reflecting this emerging field Demonstrating several foundational theories and frameworks as well as innovative practical implementations Guided Self Organisation Inception will be an invaluable tool for advanced students and researchers in a multiplicity of fields across computer science physics and biology including information theory robotics dynamical systems graph theory artificial life multi agent systems theory of computation and machine learning **Building Intelligent Tutoring Systems for Teams** Joan Johnston,Robert Sottilare,Anne M.
