Information Technology Standards Quest For The Common Byte:

Information Technology Standards Martin Libicki, 2013-10-22 This book examines information technology standards and discusses what they are what they do how they originate and how they evolve While standards are important in improving system interoperability and thereby increasing economic productivity they are unlikely to achieve their full potential due to a variety of factors chief of which is the politics of the standard process itself Libicki points out that the government is not likely the best source for designing and promoting standards He does an excellent job of breaking down many complex technical issues and presenting them in a fashion that technical people can enjoy and policy makers can understand **The Role of Technical Standards in Today's Society and in the Future** United States. Congress. House. Committee on Science. Subcommittee on Technology, 2001 *Standardisation Processes in IT* Kai Jakobs, 2013-11-11 2 1 Standards and Standardisation in IT A General Overview The process of standardisation cannot be regarded as a simple one dimensional activity required to lay down technical rules and guidelines taking place in a removed world of its own Rather it must be considered in conjunction with the environment within which it takes place Very different facets need to be taken into account when trying to actually understand this process Even if we disregard social moral and religious rules for the moment standards still in a very general sense have been with us for quite some time about 5 000 years ago the first alphabets emerged enabling completely new forms of communication and information storage Some 2 500 years later the first national coin based currency invented by the Lydians established the basis for easier inter regional and even international trading The industrial revolution in the 18th century and more so the advent of the railroad in the 19th century resulted in a need for technical standards which was once more reinforced when mass production generated a demand for interchangeable parts In parallel the invention of the electric telegraph in 1837 triggered the development of standards in the field of electrical communication technology In 1865 the International Telegraph Union to become the International Telecommunication Union ITU in 1932 was founded by twenty states The other major international standards setting body the International Organization for Standardization ISO was established in 1947 Using the Engineering Literature Bonnie A. Research Council, Policy and Global Affairs, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Deterring Cyberattacks: Informing Strategies and Developing Options for U.S. Policy, 2010-10-30 In a world of increasing dependence on information technology the prevention of cyberattacks on a nation's important computer and communications systems and networks is a problem that looms large Given the demonstrated limitations of passive cybersecurity defense measures it is natural to consider the possibility that deterrence might play a useful role in preventing cyberattacks against the United States and its vital interests At the request of the Office of the Director of National Intelligence the National Research Council undertook a two phase project aimed to foster a broad multidisciplinary examination of strategies for deterring cyberattacks on the United States and of the possible utility of these strategies for the U S government The first phase produced a letter report providing basic information needed to understand the nature of the problem and to articulate important questions that can drive research regarding ways of more effectively preventing discouraging and inhibiting hostile activity against important U S information systems and networks The second phase of the project entailed selecting appropriate experts to write papers on questions raised in the letter report A number of experts identified by the committee were commissioned to write these papers under contract with the National Academy of Sciences Commissioned papers were discussed at a public workshop held June 10 11 2010 in Washington D C and authors revised their papers after the workshop Although the authors were selected and the papers reviewed and discussed by the committee the individually authored papers do not reflect consensus views of the committee and the reader should view these papers as offering points of departure that can stimulate further work on the topics discussed The papers presented in this volume are published essentially as received from the authors with some proofreading corrections made as limited time allowed
