Infrastructures Of Consumption Restructuring The Utility Industries:

Infrastructures of Consumption: Restructuring the Utility Industries Bas Van Vliet, 2005 Annotation Shows how utilities are being restructured for resource efficiency to improve environmental performance and for cost savings through consumer or demand side drivers Includes coverage of energy water and waste utilities providing core information for industry researchers students and consumer groups Draws on case studies from the UK and The Netherlands as examples of the ongoing worldwide environmental transformation of utilities For many years a uniform and uncontested picture of utility system organization has endured across Europe Provider and consumer roles have been largely taken for granted and consumers have had little choice but to use the infrastructure of the only network provider available Yet recent transformations have challenged this model This book examines the ongoing environmental restructuring of consumption and provision in energy water and waste systems In accounting for the distinctive environmental qualities technical features and institutional dynamics of utility systems this book challenges contemporary conceptualizations of consumers as the autonomous drivers of environmental change Instead utilities and users are positioned as the co managers of utility systems and processes of environmental innovation are seen to depend on creating contexts for the systemic restructuring of demand

the World's Cities ,2010 In a rapidly urbanizing global society solid waste management will be a key challenge facing all the world s cities This publication provides a fresh perspective and new data on one of the biggest issues in urban development Assessing sanitary mixtures in East African cities Sammy C. Letema, 2023-09-04 It has been common for

both scientists and policy makers to view sanitary provision as a dichotomy between a centralised and a decentralised approach Moreover sustainability assessment has also been characterized by a dualistic approach between the techno centric and the eco centric Such views are often simplistic and not in tandem with the existing multiple sanitary options and service providers in East African cities which defy such classification This book provides the theoretical and empirical basis for a third way of classifying and assessing the multiple technical and institutional options to sanitary provision This novel assessment approach called modernised mixtures is used in this book as a tool for conceptualising assessing and improving sanitary provision in East African cities The assessment is based on four social and technical dimensions and three sustainability criteria This inclusive approach in assessing sanitary mixtures benefits decision making among imperfect options Third Millennium Capitalism Wyatt Rogers, 2000-02-28 The Third Millennium presents unprecedented

opportunities and challenges to capitalism as a global economic system Technological advances governmental policies energy

supply ecological concerns and a burgeoning world population are among the issues to be addressed by private enterprise in holistic and humanitarian ways No longer can these issues be treated in isolation inasmuch as they are becoming increasingly interdependent As Rogers shows in industrialized nations with their aging and stabilizing populations the marketplace and the working environment are changing requiring new approaches to work and leisure In sharp contrast populations in the Third World are growing rapidly and represent vast potential new markets for the private sector Simultaneously enormous social health and political problems abound in many Third World countries that may be addressed by private sector and governmental initiatives Economic expansion in Third World nations will require great expansion of electric and other energy systems resulting in increased environmental degradation unless major preventive measures are taken Continued growth of energy systems in industrialized nations will require the introduction of increased pollution controls in the near future A definitive transition from dependence on fossil fuels to nonpolluting renewable energy sources should be a major global priority Environmental protection efforts previously confined to major industrialized nations should become a high priority issue on a global basis Global climate change and other air pollution desertification deforestation loss of biodiversity and water pollution are extending into formerly pristine areas forcing international approaches to mitigation A challenging assessment for business officers policy analysts and economists involved with corporate strategy and economic development

Public Utilities David E. McNabb, 2005-01-01 Professor McNabb has produced an excellent overview of the management challenges facing public utilities in the 21st century His description of the evolution changes and challenges of different types of utilities is insightful What makes this book uniquely valuable is his addressing the variety of utility management responsibilities including human resources information services and strategic planning in a single volume I recommend it highly Jeffrey Showman Washington Utilities and Transportation Commission US An introduction to the current issues and challenges facing managers and administrators in the investor and publicly owned utility industry this engaging volume addresses management concerns in three sectors of the utility industry electric power natural gas and water and wastewater systems Beginning with a brief overview of the historical development of the industry the author looks at policy issues and discusses management ethics He then examines a number of the major challenges in these organizational functions management and leadership planning marketing accounting and finance information technology governance and human resources In the final section of the volume he looks at issues specific to each of the three industry sectors Accessible and comprehensive this thoughtful exploration of the various issues facing managers in public utilities in the new century will prove a useful overview for students of business and economics utility staff and directors of local utility governing boards

Regulating Infrastructure José A. Gómez-Ibáñez,2006-09-01 In the 1980s and 90s many countries turned to the private sector to provide infrastructure and utilities such as gas telephones and highways with the idea that market based incentives would control costs and improve the quality of essential services But subsequent debacles including the collapse of California s wholesale electricity market and the bankruptcy of Britain s largest railroad company have raised troubling questions about privatization This book addresses one of the most vexing of these how can government fairly and effectively regulate natural monopolies those infrastructure and utility services whose technologies make competition impractical Rather than sticking to economics Jos G mez Ib ez draws on history politics and a wealth of examples to provide a road map for various approaches to regulation He makes a strong case for favoring market oriented and contractual approaches including private contracts between infrastructure providers and customers as well as concession contracts with the government acting as an intermediary over those that grant government regulators substantial discretion Contracts can provide stronger protection for infrastructure customers and suppliers and greater opportunities to tailor services to their mutual advantage In some cases however the requirements of the firms and their customers are too unpredictable for contracts to work and alternative schemes may be needed
