Gottardi, 2018-08-20 Pulished in 2000 a selection of contributions presented in 1998 at the conference of Udine entitled The Development of Industrial Districts in Italy The theoretical aim of the book is to explain the dynamic mechanism of the growth of Italian industrial districts shifting attention from Marshallian industrial districts where focus is not just on the decentralization of production among small batch firms Determinant factors explaining growth seem related to the ways in which firms explore the markets learn tacit knowledge network with subcontractors and make incremental innovations In substance the work offers a cognitive approach to the issue of industrial districts

Input-Output Models for Sustainable Industrial Systems Raymond R. Tan, Kathleen B. Aviso, Michael Angelo B. Promentilla, Krista Danielle S. Yu, Joost R.

Santos, 2018-09-12 This book addresses the specialized topic of input output models for sustainable industrial systems While these models are well established tools for economic analysis their underlying mathematical structure is also applicable to the analysis and optimization of a wide range of systems that are characterized by linear interdependencies among their components This means that input output models can be used for diverse networks such as processes within industrial plants industrial plants in a supply chain or departmental units within an organization The models can also be readily extended to interactions between man made systems and the environment e g flows of natural resources and or pollutants Furthermore model variants with excess degrees of freedom can be formulated to allow optimization and decision making to be integrated within the framework This book examines how input output models can be applied to sustainable industrial systems Each major variant is discussed separately in a dedicated chapter and representative case studies and supporting LINGO code are also included

Japanese Foreign Direct Investment and the East Asian Industrial System H. Horaguchi, K. Shimokawa, 2013-03-09

Japanese foreign direct investment has played a leading role in Asian economies for more than two decades. This book describes the changing industrial dynamics after the Asian currency crisis in 1997, focusing on corporate strategies of Japanese automobile and electronics companies in Asian nations with detailed analysis of management issues and strategies from the viewpoint of both the home economy and the recipient host economies. Among the cases presented are the global restructuring of the Korean automobile industry and the transfer of automotive technology to China via Taiwan. Other studies from the electronics industry look at production sites in Malaysia, backward integration in Singapore, and forward integration in Hong Kong. The contributions of specialists from Asia, Europe, and the United States collected here envision an ongoing process of globalization and provide valuable perspective and background for business management and East Asian studies.
